S.C. SUPREME COURT

The trial Judge the state and the Solicitor failed to present Celluar evidence which indicates that my phone never traced backed to the crime scene the book bag with the firearm inside the detective testified that he did not see the person who disregarded the book bag also I been reading the law library how long does this appeal process works.

The hospital Nurse said the victim was shot 6 times only 4 shell casings was found at the crime scene 6 bullets was left in the chamber 10 shots total in the firearm ~~was~~ all bullets didn't match only 2 bullets that matched the shell casings at the crime scene where is the express malice forensic expert and SLED expert testified that there is no evidence that I discharged the firearm touch DNA can transfer is a thousand ways the jury was instructed on that and still ignored the fact the trial judge denied every motion that my counsel try to file for many errors was made during this trial I have to sit in prison for I don't know how long until my appeal is filled and submitted the law was not applied and every motion defense was denied and ignored in multiples ways I want all my letters read carefully and respected.

The Judge denied motion too suppress the DNA evidence which was very prejudicial too Present too the Jury.

The DNA evidence that was presented never determined guilt of specific intent too kill.

The DNA that was presented only determines I was wearing a Jacket a glove and a slide where is the specific intent too kill.

Touch DNA on the grip and trigger of the gun still doesn't determine specific intent too kill the Judge denied too dismiss DNA evidence which showed no element of attempted murder.

I would like too demand that my charges be overturned or appeal my charges

All DNA evidence should've been suppress it never was presented to identify the actual shooter and it is not an element of attempted murder and Possession of a weapon during commission of a violent crime.

They never proved I was in possession of a firearm they never placed me on the scene and the firearm wasn't even found in my possession I also feel I was targeted just because the victim is white.

The trial Court was ineffective for not presenting an alibi defense for touch DNA.

The trial Court was ineffective for relying on the states DNA evidence and not conducting an independent investigation of the DNA that will connect me to the crime scene.

The identification testimony was very unreliable the victim state in the recorded body worn camera what color was the suspect wearing he took the stand and testified on false testimony I don't even match the description they left out the part when the detectives asked the victim what color was the suspect wearing.

Also I filled for my speedy trial ~~motion~~ in October the year of 2025 my speedy trial has been getting pushed back my speedy trial has been push back since January of this year im just know going to trial the week of August 31st from January well from the day I filled my motion for speedy trial up until the first day of my trial is the past the 6 months for speedy trial anything past 6 months is that qualified for speedy trial violation.

There is insufficient evidence too support my conviction. The DNA results still doesn't justify I was the shooter forensic expert and SLED expert testified that the DNA on the trigger and goip doesn't justify that

I shot the weapon they found my jacket
in a near by area they found my book bag
with a firearm that was not in my possession
when they found it they found a gold slide
with my DNA on it none of the DNA testing
traced my DNA back to the crime scene
too Prove that my presence was on the
scene what about the elements of accomplice
liability which means being present at the
crime scene or fleeing from the crime scene
this is a wrongful conviction the court of
appeals need to hear this matter I lost
my trial so I no longer have counsel that
why im filling for appeal, or overturn my
conviction I dont really know anything about
the appeal process and im not sure if I
still got counsel but this matter need to
be approached has soon as possible because
this investigation and the trial was
wrongly represented where is my justice
for a crime that I did not commit I
will be too a Prison soon whenever you
respond I will not be in the county
jail so I will write another letter
when I am sent too Prison and I have
been in the law library for quite
sometime know.

Unfair Prejudice ; Confusion , and misleading the Jury with the DNA evidence I believe that the DNA testimony was unfairly prejudicial because it confused and misled the Jury.

DNA evidence has also come to be known for its potential to confuse and mislead jurors this potential has been widely discussed by courts and in academic writing.

Touch DNA analysis cannot determine when an epithelial cell was deposited.

But when touch DNA is mentioned it's based on whether I touched an item or not you can touch an item and still you will not get a full DNA profile from that touch.

So touch DNA is basically like a hunk of the draw, whether you leave your cells or you didn't or you left a couple of cells, but it wasn't enough information to detect if it was there the touch DNA profile left the jury with the incorrect impression the jury was instructed that touch DNA does not prove that I shot the gun they ignored that fact and made an unjust decision.
