FORM 4

STATE OF SOUTH CAROLINA
COUNTY OF GREENVILLE
IN THE COURT OF COMMON PLEAS

JUDGMENT IN A CIVIL CASE
CASE NUMBER 2011CP234585

James L. Dawkins	Delphine Dawkins	Troy Lee Watts, Jr.
PLAINTIFF(S)		DEFENDANT(S)

Submitted by:	Attorney for: ☐ Plaintiff ☐ Defendant ☐ Self-Represented Litigant

DISPOSITION TYPE (CHECK ONE)

☐ **JURY VERDICT.** This action came before the court for a trial by jury. The issues have been tried and a verdict rendered.

☒ **DECISION BY THE COURT.** This action came to trial or hearing before the court. The issues have been tried or heard and a decision rendered.

☐ **ACTION DISMISSED (*CHECK REASON*):** ☐ Rule 12(b), SCRCP; ☐ Rule 41(a), SCRCP (Vol. Nonsuit); ☐ Rule 43(k), SCRCP (Settled); ☐ Other: _____

☐ **ACTION STRICKEN (*CHECK REASON*):** ☐ Rule 40(j) SCRCP; ☐ Bankruptcy; ☐ Binding arbitration, subject to right to restore to confirm, vacate or modify arbitration award; ☐ Other: _____

☐ **DISPOSITION OF APPEAL TO THE CIRCUIT COURT (CHECK APPLICABLE BOX):**
☐ Affirmed; ☐ Reversed; ☐ Remanded; ☐ Other:

NOTE: ATTORNEYS ARE RESPONSIBLE FOR NOTIFYING LOWER COURT, TRIBUNAL, OR ADMINISTRATIVE AGENCY OF THE CIRCUIT COURT RULING IN THIS APPEAL.

IT IS ORDERED AND ADJUDGED: ☐ See attached order; (formal order to follow) ☒ Statement of Judgment by the Court:

A trial judge has the discretionary power to grant a new trial *nisi*, but compelling reasons must exist to justify invading the jury's province in this manner. The Court has the duty to review the record and determine whether there has been an abuse of discretion amounting to an error of law. Waring v. Johnson, 341 S.C. 248, 533 S.E.2d 906 (S.C.App.2000). When a party moves for a new trial based on a challenge that the verdict is either excessive or inadequate, the trial judge must distinguish between awards that are merely unduly liberal or conservative and awards that are actuated by passion, caprice or prejudice. Allstate Ins. Co. v. Durham, 314 S.C. 529, 431 S.E.2d 557 (1993). If the amount of the verdict is so grossly inadequate or excessive that it shocks the conscience of the Court and clearly indicates the amount was the result of passion, caprice, prejudice, partiality, corruption or some other improper motives, the Court is required to grant a new trial absolute. Cock-N-Bull Steak House, Inc. v. Generali Ins. Co., 321 S.C. 1, 466 S.E.2d 727 (1996).

Pursuant to these standards, the Court finds the verdict was not the result of passion, caprice, prejudice, partiality, corruption or some other improper motive. The record contains sufficient evidence to support the verdict. The Court cannot weigh the evidence at this stage or make credibility determinations. Plaintiff's Motion for New Trial *Nisi Additur* or in the Alternative Motion for New Trial as to Damages Only is therefore respectfully denied.

vs.	)	
	)	
Troy Lee Watts, Jr.,	)	
	)	
Defendant.	)	

COMES NOW your Plaintiffs complaining of the Defendant who would respectfully show unto this Court as follows:

GENERAL ALLEGATIONS

1. The Plaintiffs are citizens and residents of the State of South Carolina, County of Greenville.

2. The Defendant is a citizen and resident of a county in the State of North Carolina.

3. The motor vehicle collision which is the subject of this action occurred in the state of South Carolina, County of Greenville.

4. This court has jurisdiction over the subject matter and the parties.

FIRST CAUSE OF ACTION
(Negligence)

5. On September 24, 2008 Plaintiff was lawfully operating his vehicle on Wade Hampton Boulevard in or near the City of Greenville, South Carolina when the Defendant suddenly, unexpectedly, and totally without warning drove his vehicle into the path of the Plaintiff's vehicle from a side street known as Poinsett Street. A collision ensued, and the Plaintiff was seriously injured.

6. As a direct and proximate result of the collision the Plaintiff has suffered excruciating pain and suffering, permanent and lasting disability, past and future medical expenses, economic loss, mental anguish, loss of enjoyment of life and other special and general damages.

7. All of the above was the direct and proximate result of the Defendant's wilful, wanton, reckless, negligent and grossly negligent acts and/or omissions more specifically to wit:

a. in failing to yield the right-of-way;

b. in failing to maintain and proper lookout;

c. in disregarding a traffic signal device positioned and located at the intersection where this collision occurred; The road and lane of traffic for the Defendant was governed by a red traffic signal device which prohibited further travel by the Defendant's vehicle into the intersection.

d. in failing to have his vehicle properly inspected and repaired.

e. in failing to properly equip his vehicle with brakes or in the alternative, if his vehicle was so equipped, in failing to properly use them;

f. in failing to take any sort of evasive action so as to avoid the collision between the two vehicles;

g. in operating his vehicle at a rate of speed which was excessive under the circumstances then and there existing;

h. in operating his vehicle in a wilful, wanton, reckless, negligent and grossly negligent manner under all the circumstances then and there existing

8. Plaintiff prays for a judgment against the Defendant for actual damages and for an additional amount of punitive damages.

CONSORTIUM CLAIM

9. Each and every allegation set forth above in Plaintiffs' complaint are hereby incorporated by reference as though the same were set forth verbatim.

10. At all relevant times Delphine Dawkins was the lawful wedded spouse of James L. Dawkins.

11. That as a result of one or more of the willful, wanton, reckless, or negligent acts or omissions of the Defendant, the Plaintiff, Delphine Dawkins, has suffered the loss of consortium, society, comfort, and counsel of her husband, James L. Dawkins. She has further suffered the loss of in kind services and income.

12. The Plaintiff, Delphine Dawkins, alleges she is entitled to a judgment against the Defendant for actual damages and for an additional amount of punitive damages to be determined by the triers of fact.

WHEREFORE, the Plaintiffs pray for an judgment against the Defendant individually and/or collectively for actual damages and for an additional amount of punitive damages and for the costs of this action.

Respectfully submitted,

Dear Sir:

On July 19, 2011, I accepted service of the attached Summons, Complaint, Interrogatories and Request for Production on your behalf. I am, hereby, forwarding that accepted process on to you pursuant to the provisions of S.C. Code Ann. § 38-5-70 (Supp. 2003). By forwarding accepted process on to you, I am meeting a ministerial duty imposed upon me by S.C Code Ann. § 38-77-160 (Supp. 2003). I am not a party to this case. The State of South Carolina Department of Insurance is not a party to this case. The claimant, within this service letter, provided the following additional information regarding this first party claim: James Dawkins, POLICY/CLAIM NUMBER 0785-026-40, 1421-499-40, 1402-550-40 and 1723-955-40. It is important for you to realize that service was effected upon your insurer on my date of acceptance for service.

You must promptly acknowledge in writing your receipt of this accepted process. When replying, please refer to File Number 145614, James L. Dawkins v. Troy Lee Watts , *et al.*, 2011-CP-23-4585.

2011 AUG 23 A 8:45

The Defendants, answering the Complaint of the Plaintiffs, would respectfully show unto the Court the following:

FOR A FIRST DEFENSE

1. The Defendants deny each and every allegation contained in the Plaintiffs' Complaint, which is not hereinafter specifically admitted, qualified, or otherwise modified below.

FOR A SECOND DEFENSE

2. The Defendants reincorporate such of the preceding allegations as are consistent herewith.

3. Answering Paragraph One of the Plaintiffs' Complaint, the allegations contained therein are admitted.

4. Answering Paragraph Two of the Plaintiffs' Complaint, the allegations contained therein are admitted.

5. Answering Paragraph Three of the Plaintiffs' Complaint, the allegations contained

SCANNED

14

therein are admitted.

6. Answering Paragraph Four of the Plaintiffs' Complaint, the allegations contained therein are admitted.

7. Answering Paragraph Five of the Plaintiffs' Complaint, it is admitted that on or about September 24, 2008, Troy Lee Watts, Jr., was operating his vehicle on Wade Hampton Boulevard, in Greenville, South Carolina, when the Defendant pulled into the path of the Plaintiff's vehicle. It is also admitted that an accident took place as a result. However, the remaining allegations contained in paragraph number five are denied.

8. Answering Paragraph Number Six of the Plaintiffs' Complaint, the allegations contained therein are denied.

9. Answering Paragraph Number Seven of the Plaintiffs' Complaint, it is admitted that the Defendant was negligent. However, the remaining allegations contained in paragraph number seven are denied.

10. Answering Paragraph Number Eight of the Plaintiffs' Complaint, the allegations contained therein are denied.

11. Answering Paragraph Number Nine of the Plaintiffs' Complaint, the Defendants reincorporate such of the preceding allegations as are consistent herewith.

12. Answering Paragraph Number Ten of the Plaintiffs' Complaint, the allegation contained therein is admitted upon information and belief.

13. Answering Paragraph Number Eleven of the Plaintiffs' Complaint, the allegations contained therein are denied.

14. Answering Paragraph Number Twelve of the Plaintiffs' Complaint, the allegations

contained therein are denied.

FOR A THIRD DEFENSE

8. The Defendants reincorporate such of the preceding allegations as are consistent herewith.

9. The Plaintiffs' injuries, if longstanding, were in no way caused by contact made between the two parties' vehicles.

10. As such, there is no proximate cause between a large portion of the damages complained of and the actions of this Defendant.

11. Therefore, the Plaintiffs' Complaint should be dismissed.

FOR A FOURTH DEFENSE

12. The Defendants reincorporate such of the preceding allegations as are consistent herewith.

13. If there were any longstanding injuries suffered by the Plaintiffs, they were pre-existing or post- existing in nature and, therefore, are not proximately caused by this accident.

14. Therefore, the Plaintiffs' Complaint should be dismissed.

FOR A FIFTH DEFENSE

15. The Defendants reincorporate such of the preceding allegations as are consistent herewith.

16. The Defendants are informed and believe that the Plaintiff has sought medical treatment which is inapplicable to the injuries for which he complains.

17. As such, the Plaintiffs' have failed to mitigate their damages and any award against

the Defendants should be reduced accordingly.

WHEREFORE, the Defendants, having answered the Complaint of the Plaintiffs, would respectfully pray as follows:

(a) That a jury determine what damages, if any, the Plaintiffs have suffered;

(b) For the costs and expenses associated with the defense of this action; and,

(c) For such other and further relief as the Court deems just and proper.

The Defendant, Troy Lee Watts, Jr., by and through his undersigned attorney, hereby submits the following responses to the Plaintiffs' Request to Produce:

1. Any and all photographs, video tapes and/or video film, plats, sketches, statements, estimates of repair.

RESPONSE: Please see attached the following: nine (9) black and white copies of photographs of the vehicle plaintiff was driving at the time of the accident; a South Carolina Traffic Collision Report prepared by Officer Higgins; and, a damage estimate with regard to Mr. Dawkins's vehicle. Please be advised that an additional scene diagram may be prepared and scene photographs may be taken for use at the trial of this case. Depositions of parties, officer, employment or medical personnel, and/or witnesses may also be used at the trial of this case.

2. Any and all insurance policies together with the declaration page which is applicable to this case.

RESPONSE: Not attached.

3. Any and all written or recorded statements of Plaintiff.

RESPONSE: Counsel for defendant is not in possession of any written or recorded statements from the plaintiffs at this time.

4. Any and all written or recorded statements of Defendants (except those taken by Defendant's

lawyer).

RESPONSE: Counsel for defendant is not in possession of any written or recorded statements from the plaintiff at this time.

5. Any written or recorded statements of any witnesses or potential witnesses in this case (except those taken by Defendant's lawyer).

RESPONSE: Please see the attached copy of the South Carolina Traffic Collision Report form prepared by Officer Higgins. Furthermore, counsel for defendant may call all of plaintiff's or plaintiffs' physicians, including, but not limited to, paramedics, emergency room physicians/nurses, radiologists, family doctors, or their medical records custodians as expert witnesses at the trial of this case.

6. Any and all photographs, videos, computer animations, accident reconstruction documents, films, things.

RESPONSE: Please see answer to Request to Produce number one (1). If additional documentation is obtained for use at the trial of this case, it will be shown to plaintiff's counsel prior to the same.

7. Reports of any experts.

RESPONSE: Not applicable. Counsel for defendant may call all of plaintiff's or plaintiffs' physicians, including, but not limited to, paramedics, emergency room physicians/nurses, radiologists, family doctors, or their medical records custodians as expert witnesses at the trial of this case.

8. Any information relied upon by any expert of the Defendants in forming any of the opinions reached by said expert.

RESPONSE: None at this time. If additional documentation is obtained for use at the trial of this case, it will be shown to plaintiff's counsel prior to trial. Counsel for defendant may call all of plaintiff's or plaintiffs' physicians, including, but not limited to, paramedics, emergency room physicians/nurses, radiologists, family doctors, or their medical records custodians as expert witnesses at the trial of

this case.

9. Records of measurement of the vehicles, scene, skid marks and anything relevant to this accident.

RESPONSE: None at this time. If additional documentation is obtained for use at the trial of this case, it will be shown to plaintiff's counsel prior to the same.

10. A *curriculum vitae* on every expert retained or consulted with in regard to this case.

RESPONSE: Not applicable. Counsel for defendant may call all of plaintiff's or plaintiffs' physicians, including, but not limited to, paramedics, emergency room physicians/nurses, radiologists, family doctors, or their medical records custodians as expert witnesses at the trial of this case.

11. The entire investigative file of any and all experts engaged by the Defendants with regard to this case.

RESPONSE: Not applicable. Counsel for defendant may call all of plaintiff's or plaintiffs' physicians, including, but not limited to, paramedics, emergency room physicians/nurses, radiologists, family doctors, or their medical records custodians as expert witnesses at the trial of this case.

TO: Donald R. Moorhead, Esq., as attorney for Plaintiffs:

The Defendant, by and through his undersigned counsel, and pursuant to Rule 36 of the *SCRCP*, requests that you admit or deny the genuineness of the following attached documents:

1. Three page operation consent form from Spartanburg Regional Hospital, regarding James Lewis Dawkins, dated May 5, 1997;
2. Two page gastroenterology consultation form from Specialty Group, Spartanburg Regional Hospital, regarding James Lewis Dawkins, dated January 17, 2000;
3. Two page physician's note from EastSide Cardiology, regarding James Lewis Dawkins, dated February 1, 2000;
4. Twenty-one page pharmaceutical record from CVS Pharmacy, regarding James Lewis Dawkins, dated from April 1, 2000 through March 20, 2012;
5. One physician's note from Blue Ridge Urology, regarding James Lewis Dawkins, dated from June 16, 2003 through July 14, 2003;
6. One page physician's note from Blue Ridge Urology, regarding James Lewis

Dawkins, dated November 14, 2003;

7. One page visit note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated November 17, 2003;

8. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated January 8, 2004;

9. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated February 10, 2004;

10. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated March 31, 2004;

11. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated May 6, 2004;

12. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 17, 2004;

13. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated July 20, 2004;

14. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated September 15, 2004;

15. One page x-ray examination request from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated September 15, 2004;

16. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated October 4, 2004;

17. Two page physician's note from the Smith Center for Cardiovascular Wellness,

regarding James Lewis Dawkins, dated November 15, 2004;

18. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated December 14, 2004;

19. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated January 14, 2005;

20. One page testosterone shot log from Blue Ridge Urology, regarding James Lewis Dawkins, dated from August 13, 2004 through May 19, 2005;

21. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated February 28, 2005;

22. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated March 8, 2005;

23. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated April 25, 2005;

24. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 2, 2005;

25. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated November 2, 2005;

26. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated January 31, 2006;

27. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated February 14, 2006;

28. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated March 31, 2006;

29. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated April 21, 2006;

30. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated May 8, 2006;

31. One page HIPAA compliance form from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 20, 2006;

32. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 20, 2006;

33. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 22, 2006;

34. One page x-ray examination request from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated June 22, 2006;

35. Three page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated July 13, 2006;

36. Two page physician's note from the Smith Center for Cardiovascular Wellness, regarding James Lewis Dawkins, dated September 21, 2006;

37. One page physician's note from North Hills Medical Center, regarding James Lewis Dawkins, dated March 7, 2007;

38. One page x-ray report from North Hills Medical Center, regarding James Lewis Dawkins, dated March 7, 2007;

39. Two page physician's note from North Hills Medical Center, regarding James Lewis Dawkins, dated June 28, 2007;

40. One page result text form from Greenville Radiology, regarding James Lewis

Dawkins, dated July 12, 2007;

41. One page physician's note from North Hills Medical Center, regarding James Lewis Dawkins, dated August 20, 2007;

42. Two page physician's note from North Hills Medical Center, regarding James Lewis Dawkins, dated September 13, 2007;

SPARTANBURG CONSENT
OPERATIONS AND ANESTHETICS
DIAGNOSTIC AND TREATMENT PROCEDURES

Date: 5-5-97 Time: ..... M

JAMES DAWKINS
(Name of Patient)

1. I authorize and direct Doctor(s) PEEK and / or such assistants as may be selected by him to perform the following operation(s) upon me: INJECT STEROID INTO LOW BACK
(Description of Operation in Language of Laymen)

2. Dr. PEEK has explained to me my condition and the procedures which will be used in the operation(s). No guarantee or assurance has been made as to the results that may be obtained; and he has advised me of the risks and consequences, including possible complications of doing this procedure as well as not doing this procedure. He has advised me of the other methods and procedures of treating my condition and has answered all my questions concerning those methods.

3. I recognize that during the course of the operation(s) unforeseen conditions may necessitate additional or different operations and procedures than described above. I authorize and request that the above named physician and/or his assistants perform such operations and procedures as are, in his professional judgement, necessary and desirable.

4. I consent to the administration of such anesthetics as may be considered advisable by the physician responsible for this service with the exception of: NONE
(State Exception if Desired)

5. I consent to the disposition by hospital authorities of any tissues which may be removed during the c[illegible] of the operations and procedures.

6. I DO; DO NOT consent to the administration of such blood or blood products as may be considere[illegible] isable by the physician responsible for this service.

7. I DO; DO NOT consent to the taking of photographs of myself by hospital authorities for the purpose of medical study or research only, before, during, or after the operations and procedures. (Please circle one.)

8. I DO; DO NOT consent to the presence of medical observers before, during, or after the operations and procedures. (Please circle one.)

9. I, THE UNDERSIGNED, HAVE READ AND FULLY UNDERSTAND THIS CONSENT FORM AND IT HAS BEEN EXPLAINED TO ME TO MY SATISFACTION.

04057 MRI LUMBAR SPINE

Date: 05/30/97 0849
Ord Diag: 724.2-LUMBAGO

MRI LUMBAR SPINE 05-30-97

TECHNIQUE: Sagittal T1 and T2 sequences. Axial T1 weighted sequences. Post contrast axial T1 sequence L5/S1 because of history of previous surgery at this level.

There is surgical changes in the left at L4/5. There is a small amount of enhancing scar but there are no area particularly suspicious for recurrent or residual disc herniation.

The thecal sac is quite small at the L4/5 and L5/S1 levels. There are no findings to indicate or suggest spinal stenosis.

The neural foramina appear unremarkable.

IMPRESSION: SURGICAL CHANGES L5/S1 ON THE LEFT. EXAMINATION IS NEGATIVE FOR EVIDENCE OF RESIDUAL RECURRENT DISC HERNIATION.

DAWKINS, JAMES SS# [redacted] 2/1/00

Dear Dr. Rughani,

Thanks for asking me to see Mr. Dawkins who is a 49 year old pastor who lately had a stress Cardiolite study done at North Hills Medical Center which has been reported to be abnormal. As you know, he is known to have a long-standing history of hypertension along with a family history of coronary artery disease who has been complaining of chest discomfort off and on for the last few weeks. This chest discomfort is localized in the anterior part of the chest without any specific radiation and is a pressure type feeling. He also has a history of stomach problems for which he has undergone an EGD by Dr. Yazdy in the past also. He also feels that his heart occasionally skips beats but there is no evidence of any dizziness or light-headedness. He denies any documented history of any mitral valve prolapse, etc. He can walk fairly long distances without much problem. He is not aware of his lipid status.

PAST MEDICAL HISTORY:
He had back surgery in 1985 and he is also awaiting for another GI procedure the details of which are not very clear.

FAMILY HISTORY:
Positive for coronary artery disease and myocardial infarction. His father had a myocardial infarction around the age of 67.

PERSONAL HISTORY:
He has never smoked. He denies any history of any ethanol use.

REVIEW OF SYSTEMS:
Lately, he has also been found to have blood tinged stools for which probably he is waiting for a colonoscopic examination. There is no change in his weight, appetite, etc. He denies any allergies.

REVIEW OF SYSTEMS:
The review of systems is essentially unremarkable.

PHYSICAL EXAMINATION:
On examination, Mr. Dawkins is a 49 year old black gentleman not in any distress. Vital signs are stable. In the HEENT examination, carotid upstroke is normal. There is no evidence of any bruits. JVP is not distended. Neck is supple. No thyromegaly. No cervical lymphadenopathy. Lungs are clear to auscultation. Cardiovascular examination reveals normal first and second heart sounds without any murmur or gallop. Abdominal examination does not reveal any organomegaly. Bowel sounds are active. No tenderness. In the extremities, peripheral pulses are good. No swelling of the ankles. The rest of the physical examination is within normal limits. Patient's electrocardiogram done in the office reveals a normal sinus rhythm and essentially a normal EKG.

In summary, 49 year old black gentleman who is a pastor in a local church known to have a history of hypertension and family history of coronary artery disease who has been complaining of chest discomfort and lately had a stress Cardiolite study done at the North Hills Medical Center under the direction of Dr. Rashid which has been reported to be abnormal. For further evaluation, he should have a cardiac catheterization done. The patient has been explained the procedure and details along with risks and benefits which he understands fairly well. He has been shown a video and given literature regarding this also. I will keep you posted about the findings of this cardiac catheterization.

DAWKINS, JAMES - Greer Office
6/16/03: Chief complaint: Hypogonadism.

History of present illness: This patient returns for his testosterone injection and he states that he is doing well. He is not having any significant problems and he feels that the testosterone is giving beneficial results. I went through his records and I do not see a recent PSA level, the last being about 18 months ago.

Procedure: The patient was given Depo-Testosterone 400 mg IM into the left hip.

Impression: As above.

Plan: I will see the patient back in two weeks with a PSA level and plan to do a DRE at that time. CG:gti

DAWKINS, JAMES - Greer Office
6/30/03: Chief complaint: Hypogonadism.

History of present illness: This patient returns and is overall doing well. He has some chronic low back pain that does not seem urologically related. He has no prostatism symptoms. He did have a recent PSA that is normal at 1.0.

Physical examination: Today his DRE shows the prostate to be very high and somewhat difficult to feel, but it feels 20-25 grams or so in size and benign without induration.

Plan: The patient was given Depo-Testosterone 400 mg IM today in his right hip. He is to return in two weeks. CG:gti

DAWKINS, JAMES - Greer Office
7/14/03: Chief complaint: Hypogonadism.

History of present illness: This patient returns today and has no significant urologic problems. As noted on his last visit, he has a negative PSA. The patient has noted though some blood in his stool and he has had previously, maybe two years or so ago, a work-up with colonoscopy that was apparently negative. This was not bright red blood, but he did notice some blood in his stool.

Physical examination: DRE today shows no stool that I can check for a hemoccult type test.

Procedure: He was given 400 mg IM Depo-Testosterone today.

Plan: We did give him a pack of hemoccult to send back in and I will discuss this with him next time and make further plans for referral for work-up of this problem. He is to return in two weeks. CG:gti

#6

DAWKINS, James – Greer Office
11/14/03: Chief complaint and present illness: Hypogonadism. This patient returns today for Depo-Testosterone and he tells me that he is doing fine. He does have some sinus problems and long-time back problems. His back problems are worse during cold weather, but he is doing well overall. His blood pressure is essentially stable, although today his reading shows 152/80. We will continue to watch this.

Plan: He was given 400 mg of Depo-Testosterone in his left hip. He is to return in two weeks.

CHIEF COMPLAINT(S):

The patient is here today for a follow-up, Patient states that the last couple of weeks his gouty arthritis has been acting up. He stated that Monday it was in his left foot and after taking the Medrol DosePak the gout left and went into his right ankle. He states that today he has a little swelling and soreness. Patient stated that he went to the emergency room three weeks ago and he had gout in his right elbow and he was given a Medrol DosePak and that seems to help him more.

HISTORY OF PRESENT ILLNESS:

Past medical history is listed in the patient's list of active diagnoses.

CHIEF COMPLAINT(S):

The patient is here today as a walk- in. His main complaint today is left knee pain. Mr. Dawkins stated that the pain started Monday night (last night). His last gouty attack was in his left knee approximately 6 months ago. He states that it is his left knee which has been mostly affected and he has also had some problems with his left foot as well, but this has been almost as long as a year ago. Patient is not on a low purine diet, and his medications include Lasix 40mg QD.

Patient also mentioned that he has not taken the Cardizem, Avapro or Allopurinol in two days because he was out of these medications. Mr. Dawkins also requesting a refill on his Medrol.

HISTORY OF PRESENT ILLNESS:

Past medical history is listed in the patient's list of active diagnoses.

CHIEF COMPLAINT(S):

Mr. Dawkins is a walk-in patient today, stating that he is noticing bright red blood when he wipes after having a BM. He has had a history of occasional nonpainful rectal bleeding w/ BM's, but has never come in to be seen for it. He states that it usually resolves on its own without treatment of any kind. He does feel a "throbbing sensation" in his rectum occasionally, and states that he does not always have bleeding with this sensation.

His BP is elevated today and he states that he has been under a lot of stress lately, because he is going through a divorce. He also believes that his BP is elevated at each OV because he may have "white coat syndrome". He denies Chest Pain, SOB, but did wake up with a little bit of a headache today. He denies depression or anxiety.

He states that the Desyrel has been helping with his sleep.

CHIEF COMPLAINT(S):

Patient is here today for a follow up. He has no complaints today. Mr. Dawkins mentions he had discussed with you increasing the dosage on his sleeping medication because he has been having to take two. He also mentions that he has been taking his Allopurinol 1 tablets TID, per our last phone conversation.
He recently started walking 3 miles/day (for the past couple of weeks). He states that he had back surgery in '85, and recently was cutting up some wood with a chainsaw (about 5 days ago), and he started developing low back, hip & leg pain yesterday. His left leg seems to be bothered more than the right and he is only bothered in his right leg occasionally. He also has a problem with sciatica on his left side (mostly) in the past.

PROCEDURES RECOMMENDED:
Complete Physical Exam by SMITH CENTER-ICAVL CERIFIED on 04/21/2006

RECOMMENDATIONS:
Followup Visit Recommended: 2 Week(s)
I am unsure if his blood pressure is elevated more due to the acute pain he is experiencing. We did increase his Cardizem LA dose @ his last visit. He is not checking his BP's outside of his office visits, but is planning on getting a home monitor to start checking his BP's daily.
No change in BP meds @ today's visit: we will treat his Low Back pain and sciatica first and in two weeks re-evaluate his HTN.
Increased dose of Desryel to help with sleep.
We will get an EKG/CXR @ his next visit (nurse's part of CPE)

CHIEF COMPLAINT(S):

Patient here today for a follow-up visit. Mr. Dawkins mentioned that he walked 5 miles this morning. He also mentioned that he has been having problems with his back but since he has been walking it seems to have gotten better. Patient states that he has not been sleeping well and he is requesting something for it. Mr. Dawkins stated that he had to cancel his appointment with the urologist because he was out of town preaching.

CHIEF COMPLAINT(S):

Patient here today as a call-in; Mr. Dawkins is c/o pain in his groin area that has been happening off and on for a while. He also mentioned that he cut wood on his off time but last week he lifted some suit cases and that is when the pain got worse in groin . He's been cutting fire wood a lot lately. He also lifted some heavy suitcases last Friday. He has been having groin pain off an on for several years now, but seems to be aggravated since lifting the suitcases on Friday. He denies any history of inguinal hernias.

SMITH CENTER FOR CARDIOVASCULAR WELLNESS

PATIENT NAME: DAWKINS, JAMES L. DOB: [redacted] Sex:M SSN [redacted]

ENCOUNTER TYPE: Visit on 07/13/2006
PROVIDER: MAUREEN BAILEY, PA-C/D. SMITH, MD
45 CREEKVIEW COURT
GREENVILLE, SC 29615
(864)234-7474

CHIEF COMPLAINT(S):

Patient here today for management of his hypertension, low back pain and gout. He is requesting the results of his 24 hour blood pressure monitor. Mr. Dawkins stated that he stopped taking cialis and the pain in his groin went away. He was instructed to start taking his Toprol XL QHS instead of QAM, by phone, after reading the 24 HrBP study. He has not been able to sleep at all since switching the Toprol XL to QHS dosing. He states that he as frequent nocturia as well. He has already switched it back to QAM dosing and is doing much better.

Referring Doctor: HARLICIA F FARLEY MD

PATIENT: James Dawkins
DOB: 07/11/50
SSN: [redacted]
DATE: 03/07/07

HISTORY OF PRESENT ILLNESS: James Dawkins is a 56-year-old black male complaining of right shoulder pain. He says the pain started several years ago when he worked for General Electric and he carried pipe on his right shoulder. He says he started to have difficulties sooner after. He has had intermittent exacerbation over the past few years, but has noticed in the last several months that he has increased pain and decreased range of motion in the right shoulder. He denies inflammation or increased warmth of the area. He denies any recent trauma. He says he cannot lift the right arm as high as he can of the left and that has become more debilitating recently.

PHYSICAL EXAMINATION: There is no crepitus to the right shoulder, but it is tender superiorly. There is no calor or rubor noted. He does have good grip strength bilaterally. He does have decrease of range of motion on extension of the right arm.

ASSESSMENT/PLAN: Right shoulder pain. X-rays are currently pending. The patient for now is to take Celebrex 200 mg once daily and we will refer him to orthopedic surgeon for further evaluation.

Result Text:

IMPRESSION:
1. MILD TO MODERATE MULTILEVEL DEGENERATIVE DISK DISEASE IN THE LUMBAR SPINE, WORST AT THE L5-S1 LEVEL. AT L5-S1 POST SURGICAL CHANGES OF LEFT SIDED LAMINOTOMY ARE SEEN WITHOUT EVIDENCE OF RESIDUAL DISK HERNIATION. POST SURGICAL EPIDURAL FIBROSIS MAY SURROUND AN ASYMMETRICALLY ENLARGED LEFT S1 NERVE ROOT, HOWEVER.
2. MULTILEVEL MILD SPINAL CANAL NARROWING SECONDARY TO DEGENERATIVE CHANGES SUPERIMPOSED ON SMALL PEDICLES.
3. MODERATE BILATERAL FORAMINAL NARROWING AT L5-S1 WITHOUT CLEAR CUT IMPINGEMENT OF THE EXITING L5 NERVE ROOTS.
AMR 0129 - ABMH MRI LUMBAR SPN W/WO CON (7774713)07/11/2007 14:00
Ordered by: Dr. ARTHUR SMITH, MD
REASON FOR EXAM: LBP SPONPYLOSIS
RESULT:
JAMES DAWKINS
MRI LUMBAR SPINE WITH CONTRAST, 7/11/07:
INDICATION: FIFTY-SEVEN-YEAR-OLD MALE WITH LOW BACK PAIN AND SPONDYLOSIS. PATIENT REPORTS LOW BACK PAIN ON QUESTIONNAIRE FOR THE PAST 2-3 WEEKS.
HISTORY: BACK SURGERY APPROXIMATELY 20 YEARS AGO.
TECHNIQUE:
Standard MRI examination of the lumbar spine utilizing the postoperative protocol which includes multiplanar images before and after 20 ml. of IV Magnevist contrast.
FINDINGS:
Alignment of the lumbar spine is normal. With the exception of degenerative end-plate changes at L5-S1, the lumbar vertebrae display normal marrow signal. Edema within the L5- S1 end plates is not inconsistent with discogenic induced change. Vertebral bodies maintain normal height without compression. Visualized lower spinal cord and conus are of normal size and position. Today s number scheme assumes 5 nonrib-bearing lumbar-type vertebral bodies.
Examination of disk levels in SAGITTAL images demonstrates severe degenerative disk disease at L5-S1 where there is advanced disk space narrowing, desiccation, as well as type I Modic end-plate changes. Mild desiccation seen at the L3-4 and L4-5 levels. Spinal canal appears to be extremely modest on a developmental bases as well due to short pedicles.
Examination of intervertebral disk levels on axial images demonstrates:
L2-3: Normal posterior disk configuration without spinal canal, foraminal stenosis. Mild facet hypertrophy.
L3-4: Mild anular bulge flattens ventral surface of thecal sac but has not caused significant spinal canal or foraminal encroachment. Normal facets.
L4-5: Moderate bulging of the disk anulus and moderate facet hypertrophy. There is only mild resultant spinal canal stenosis. Mild bilateral foraminal narrowing is seen without clear cut impingement of the exiting L4 nerve roots within the foramina.
L5-S1: Post surgical changes of left sided laminotomy. No evidence of residual, recurrent disk herniation. Post surgical epidural fibrosis may surround the traversing S1 nerve root. Left S1 nerve root is also asymmetrically enlarged. There is some enhancement of the left paracentral disk margin which likely reflects post surgical granulation tissue. No significant nonenhancing contour abnormality to suggest a residual or recurrent disk herniation instead. Mild facet hypertrophy. Moderate bilateral foraminal narrowing is seen primarily secondary to loss of disk space height and end-plate osteophyte formation. No significant spinal canal encroachment at this level.
Limited visualized retroperitoneal paraspinal planes demonstrate no additional apparent abnormalities.

CHIEF COMPLAINT: back problem

HISTORY OF PRESENT ILLNESS: Mr Dawkins continues to c/o groin pain. Pain mainly localized on the left side and shoots to the back. Pain occurs daily and he cannot identify any specific identifying factors. Pain ongoing for severalo months. No improvement.

PAST MEDICAL HISTORY:
No history of significant medical diseases.

SOCIAL HISTORY:
MARITAL STATUS: Divorced.

REVIEW OF SYSTEMS:
GI: Has not had any change in bowel habits, MELANA. occas
GU: HAS TESTICULAR PAIN, no scrotal problems noted, no urinary problems noted.
MUSCULOSKELETAL: HAS MUSCULAR PAIN.

PHYSICAL EXAM:
CONSTITUTIONAL:
GENERAL APPEARANCE: Black male, normal body habitus, in no acute distress.
GASTROINTESTINAL:
RECTAL EXAM: Rectal exam reveals no masses or hemorrhoids, sphincter tone is normal.
STOOL: HEMOCCULT POSITIVE.
GENITOURINARY:
SCROTUM/CONTENTS: Normal scrotal contents bilaterally.
PHALLUS: No lesion on glans. Shaft normal. No Peyronie's noted.
PROSTATE: Symmetrical and smooth with no nodularity or tenderness.
Increase discomfort to palpation on the left inguinal area vs the right. No palpable mass

LABS/RADIOLOGY/TESTS: The following labs/radiology/tests results were discussed with the patient: CBC, Sed rate. Abdominal xrays, pelvic xrays. US Prostate, Scrotum and Inguinal

ASSESSMENT/PLAN:
724.4-THORACIC OR LUMBOSACRAL NEURITIS
ASSESSMENT: Xray pending
608.9-UNSPECIFIED DISORDER OF MALE GENITAL
ASSESSMENT: US/ Xrays pending
578.9-HEMORRHAGE OF GASTROINTESTINAL TRACT, UN
ASSESSMENT: A referral will be obtained for a gastroenterologist.

RETURN VISIT: Patient instructed to return in 1 month.

Date of Birth: [redacted] **Date of Service: 09/13/2007**
Referring Doctor:

ABDOMEN (FLAT AND UPRIGHT) Flat and upright films of the abdomen show a non-specific gas pattern without bile dilatation. There is no organomegaly.Fecal contents seen at places. There are no displacements or masses. There is no evidence of air fluid levels or air under the diaphragm.
CONCLUSION: Fecal contents seen at places, otherwise normal abdomen.

PELVIS (AP ONLY) AP view of the pelvis shows the pelvic ring to be intact. Both hips are within normal limits and the sacroiliac joints are unremarkable.
CONCLUSION: Normal pelvis.

LUMBOSACRAL SPINE: Multiple views of the lumbosacral spine shows the vertebral bodies to be normal in height and alignment. Marked narrowing seen at L5-S1 level, suggestive of Degenerative Disease. Recommend MRI of Ls spine for further evaluation. The pedicles and posterior elements are intact. The curvature is within normal limits.

CONCLUSION: 1. Marked narrowing seen at L5-S1 Level, suggestive of Degenerative Disc Disease.
2. Recommend MRI of Ls spine for further evaluation.

International Prostate Symptom Score (I-PSS)

Patient's Name James L. Dawkins Date of Birth [redacted] Date Completed 9-26-07

	Not at all	Less than 1 time in 5	Less than half the time	About half the time	More than half the time	Almost always	Your score
1. Incomplete Emptying Over the past month, how often have you had a sensation of not emptying your bladder completely after you finished urinating?	(0)	1	2	3	4	5	
2. Frequency drinks a lot of water Over the past month, how often have you had to urinate again less than two hours after you finished urinating?	0	1	2	3	4	5	
3. Intermittency Over the past month, how often have you found you stopped and started again several times when you urinated?	0	1	2	3	4	5	
4. Urgency Over the past month, how often have you found it difficult to postpone urination?	(0)	1	2	3	4	5	
5. Weak Stream Over the past month, how often have you had a weak urinary stream?	(0)	1	2	3	4	5	
6. Straining Over the past month, how often have you had to push or strain to begin urination?	(0)	1	2	3	4	5	
	None	**1 time**	**2 times**	**3 times**	**4 times**	**5 times or more**	
7. Nocturia Over the past month, how many times did you most typically get up to urinate from the time you went to bed at night until the time you got up in the morning?	0	1	2	(3)	4	5	
Total I-PSS Score							

	Delighted	Pleased	Mostly satisfied	Mixed	Mostly dissatisfied	Unhappy	Terrible
Quality of Life Due to Urinary Symptoms If you were to spend the rest of your life with your urinary condition just the way it is now, how would you feel about that?	0	1	2	3	4	5	6

The International Prostate Symptom Score (I-PSS) is based on the answers to seven questions concerning urinary symptoms. Each question allows the patient to choose one of six answers indicating increasing severity of the particular symptom. The answers are assigned points from 0 to 5. The total score can therefore range from 0 to 35 (asymptomatic to very symptomatic). Furthermore, the International Scientific Committee recommends the use of a question to assess the quality of life. The answers to this question range from "delighted" to "terrible" or 0 to 6. Although this single question may or may not capture the global impact of benign prostatic hyperplasia (BPH) symptoms or quality of life, it may serve as a valuable starting point for doctor-patient conversation.

The International Scientific Committee recommends that all physicians who counsel patients suffering from symptoms of prostatism utilize these measures not only during the initial interview but also during and after treatment in order to monitor treatment response.

The International Scientific Committee, under the patronage of the World Health Organization (WHO) and the International Union Against Cancer (UICC), has agreed to use the symptom index for BPH, which has been developed by the American Urological Association (AUA) Measurement Committee, as the symptoms assessment tool for patients suffering from prostatism.

CHIEF COMPLAINT

What is the main reason for your visit today? (Describe your problem in detail)

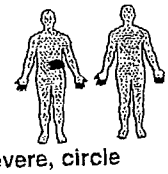
XRay REVEALED a "mass" in my left side.

History of Present Illness

57yo

Please answer the following questions

Location of the problem
(Abdomen) Back Leg
Other



On a Scale of 1-10, with 10 being the most severe, circle the number that best describes the problem?

1 2 3 4 5 (6) 7 8 9 10

When did you first notice the problem?
2 days ago 2yrs but 2 weeks ago 1 month ago
Other Intensified RECENT month

Does anything help or make the problem worse?
Moving around Standing Up Lying on my side
Other Sitting for long time

How long does the problem last?
30 minutes 1 hour It is always there
Other SEVERAL hours - sometimes intense

Is anything else occurring at the same time?
YES (No) If yes, please explain.
Nausea Rash Headaches
Other

Is the problem constant or variable?
(Dull then Sharp) Very sharp then leaves Always there
Other

Does the problem interfere with your normal functions?
(YES) No If yes, please explain intimacy & going to any function that requires extensive sitting.

CHIEF COMPLAINT: f/u

HISTORY OF PRESENT ILLNESS: pt here for follow-up. Needs refills. Wants to lose weight. Pt says he has gained 20 pounds. He has not been exercising as much as he previously did.

PAST MEDICAL HISTORY: Benign Prostate Hyperplasia

FAMILY HISTORY:
GENERAL FAMILY ILLNESS: POSITIVE HISTORY OF CANCER OF THE PROSTATE GLAND.
FATHER: The cause of death was myocardial infarction. Death occurred at age 68.

SOCIAL HISTORY:
TOBACCO USE: Has no smoking history.

REVIEW OF SYSTEMS:
GENERAL: HAS HAD A CHANGE IN WEIGHT.

PHYSICAL EXAM:
CONSTITUTIONAL:

GENERAL APPEARANCE: Black male, normal body habitus, in no acute distress.
NECK AND THYROID: Symmetrical with no elevation of the jugular venous pulsation. Trachea midline. No thyroid enlargement, tenderness, or mass.
RESPIRATORY: Clear to auscultation and percussion. Normal respiratory effort. No fremitus.
CARDIOVASCULAR:

PALPATION & AUSCULTATION: Regular rate and rhythm.
EDEMA/VARICOSITIES OF EXTREMITIES: No edema.

GASTROINTESTINAL:

ABDOMEN: Soft, non-tender, without masses, hernias or bruits. Bowel sounds are active in all 4 quadrants.

NEUROLOGIC:

CRANIAL NERVES: CNs II-XII grossly intact.

PSYCHIATRIC: Judgment appropriate. Oriented. Normal memory. Mood and affect appropriate.

LABS/RADIOLOGY/TESTS: The following labs/radiology/tests results were discussed with the patient: Alb, Bili, Ca, Cl, Cr, Glu, Alk Phos, K, Na, SGOT, BUN, Uric acid.
ASSESSMENT/PLAN:

274-GOUT

MEDICATIONS:

ALLOPURINOL ORAL TABLET 100 MG, 1 Every Day, 30 Dispensed, 12 Fills, status: CONTINUED, 01/14/2008.

401.9-UNSPECIFIED ESSENTIAL HYPERTENSION

MEDICATIONS:

CARDIZEM LA ORAL TABLET 24 HR 420 MG, 1 Every Day, 30 Dispensed, 12 Fills, status: CONTINUED, 01/14/2008.

AVALIDE ORAL TABLET 300-25 MG, 1 Every Day, 30 Dispensed, 12 Fills, status: CONTINUED, 01/14/2008.

CARDIZEM LA ORAL TABLET 24 HR 420 MG, 1 Every Day, 30 Dispensed, 12 Fills, status: CONTINUED, 01/14/2008.

TOPROL XL ORAL TABLET 24 HR 100 MG, 1 Every Day, 30 Dispensed, 12 Fills, status: CONTINUED, 01/14/2008.

607.84-IMPOTENCE OF ORGANIC ORIGIN

RETURN VISIT: Patient instructed to return in 3 months.

In reference to your recent referral of:

JAMES L DAWKINS
115 KENNEDY RD
TAYLORS, SC 29687-
DOB: 07-11-50

GREENVILLE RADIOLOGY

CT Abdomen, Pelvis w & w/o Contrast

Date Of Service: 04-25-08 **NO CONTRAST TYPE OR AMOUNT IS GIVEN.

REPORT:

HISTORY: Mass on the kidneys seen on ultrasound. Microscopic hematuria. Left-sided abdominal pain.

COMPARISON: Previous IVP exam, as well as ultrasound dated 04/18/08.

TECHNIQUE: CT scan, with and without contrast, of the abdomen and CT scan, with contrast, of the pelvis.

CT, ABDOMEN FINDINGS: The adrenal glands are normal in size. Too-small-to-characterize lo-density lesions are identified in the lower pole of left kidney. In the upper pole of left kidney, there is a nonenhancing 14 HU measurement cystic lesion, without any significant enhancing solid component, focal wall thickening or thickened septation. It measures 2.5 x 2.5 cm, compatible with a benign lesion. In the lower pole of the right kidney, there is an unfortunate mass with irregular enhancement. It measures 2.3 x 2.3 cm. It is highly suspicious for a renal cell carcinoma. I see no gross evidence of extension in to the collecting system or right renal vein. No enlarged abdominal lymph nodes are identified. There is a 4.0 mm nodule in the right lower lobe, just posterior to the major fissure. Small nodule is identified at the left lung base, as well. Another nodule is identified in the left upper lobe, image #4. Small nodule is partially included on image #1, left lower lobe superior segment. None of these nodules appears to be calcified. The liver enhances homogeneously. The gallbladder appears normal. The spleen is normal in size. The pancreas appears normal. I see no evidence of abdominal lymph node enlargement.

IMPRESSION:

1. THE MASS IN THE LOWER POLE OF RIGHT KIDNEY IS HIGHLY SUSPICIOUS OF MALIGNANCY.
2. NO EVIDENCE OF ABDOMINAL LYMPH NODE ENLARGEMENT OR OBVIOUS RENAL VENOUS OR COLLECTING SYSTEM INVASION.

204

3. THE MILDLY HYPERDENSE CYSTIC LESION IN THE UPPER POLE OF LEFT KIDNEY IS MOST LIKELY BENIGN. IT IS A BOSNIAK CATEGORY II LESION AND NEEDS NO ADDITIONAL FOLLOW-UP, AS IT IS CONSISTENT WITH A BENIGN ETIOLOGY.
4. NONCALCIFIED LUNG NODULES ARE NONSPECIFIC. METASTASES vs. PREVIOUS GRANULOMATOUS INFECTION OR OTHER ETIOLOGY WOULD BE CONSIDERED. FOLLOW-UP IS RECOMMENDED.

CT, PELVIS FINDINGS: The unopacified urinary bladder appears normal. The prostate gland appears enlarged, measuring 5.2 x 5.4 cm. The seminal vesicles appear normal. The rectus sigmoid colon appears unremarkable. 1.0 cm bilateral inguinal lymph nodes are identified. Calcified bone island is identified in the right femoral head. Moderate osteoarthritic change is present at the sacroiliac joints. Degenerative disc disease changes and facet hypertrophy are identified in the lower lumbar spine.

IMPRESSION:

1. PROSTATE ENLARGEMENT.
2. OTHER INCIDENTAL FINDINGS, AS GIVEN ABOVE.

HISTORY

MEDICAL HISTORY: **History of hypertension, which is being treated.** (09:53 MVL)
PSYCHIATRIC HISTORY: **No previous psychiatric history, No depression, No psychosis, Not suicidal, Not homicidal.** (09:53 MVL)
SURGICAL HISTORY: **laminectomy OVER 15– 20 YEARS AGO bilat bone spurs removed from feet.** (09:53 MVL)
SOCIAL HISTORY: **Lives with others, Denies alcohol abuse, Denies tobacco abuse, Denies drug abuse.** (09:53 MVL)
FAMILY HISTORY: **Family history is not contributory to this case.** (09:53 MVL)
NOTES: Nursing records reviewed, Medication list reviewed. (12:04 JAS)

CURRENT MEDICATIONS (09:55 MVL)

Lopressor: 200 milligram(s) by mouth every day.
2 other BP meds patient doesnt remember name

HPI MVA–MVC (12:03 JAS)

CHIEF COMPLAINT: **Patient was involved in motor vehicle crash, Patient was driver,** Speed of patient at time of accident was **0–5mph,** Speed of other object was **unknown, Struck on driver side by another vehicle (t–boned),** Patient was wearing lap/shoulder belt, **Patient arrived with cervical spine immobilization in\ place, Patient arrived on backboard.**
HISTORIAN: History obtained from patient.
OCCURRED: **Onset of symptoms reported as sudden, Just prior to presentation.**
LOCATION: Neck pain: **Moderate,** Back pain: **Moderate,** Chest pain: None, Abdominal pain: None, Extremity Injury: **shoulder.**
ASSOCIATED WITH: **No associated symptoms,** LOC: None, GCS: 15, On scene GCS: 15.

PHYSICAL EXAM (12:07 JAS)

CONSTITUTIONAL: Vital signs reviewed, Alert and oriented X 3.
HEAD: Atraumatic, Normal cephalic.
EYES: Pupils equal and reactive to light, Extraocular muscles intact.
ENT: Oropharynx normal, Mucous membranes pink, moist, normal in color.
NECK: No abrasions, No contusions.
RESPIRATORY/CHEST: Assessment includes:, Chest is nontender. Breath sounds normal, No respiratory distress.
CARDIOVASCULAR: Assessment includes:, No murmurs.
ABDOMEN: Assessment includes:. Abdomen is nontender, No masses.
BACK: Normal inspection, **There is midline tenderness, There is paraspinal tenderness, in the upper back, There is paraspinal tenderness in the mid–back, There is paraspinal tenderness in the lower back.**
UPPER EXTREMITY: Inspection normal, Normal range of motion, Shoulder exam shows, no swelling, no hematoma, no muscle atrophy, full range of motion, distal pulse intact, distal motor intact, distal senory intact.
LOWER EXTREMITY: Inspection normal, No cyanosis/clubbing/edema, No calf tenderness, Normal range of motion.
NEURO: GCS is 15, No focal motor deficits, No focal sensory deficits, Cranial nerves intact.
SKIN: Skin is warm and dry.
PSYCHIATRIC: Oriented X 3, Normal affect.

DIAGNOSIS (11:55 JAS)

FINAL: PRIMARY: **muscle strain s/p mvc.**

GREER MEMORIAL HOSPITAL
ABMH RADIOLOGY
GREENVILLE, SC

Patient Name: DAWKINS,JAMES
DOB: [redacted]
SEX: Male
Reason for Exam: PAIN (SPINE)

Medical Record#: [redacted]
Pt. NS/Room: 04ED / 04ED
Corp. Act. No:
Patient Type: Emergency

Account: [redacted]
Ordering MD: JO, SOUSA, MD
GHS - EMERGENCY SERVICES
701 GROVE ROAD
GREENVILLE, SC 29605

RX496600-SPINE LUMBAR AP/LAT 09/24/2008 10:11AM EXAM#: 10333402

IMPRESSION:

SLIGHT LATERAL WEDGING OF T4. THIS MAY BE OLD BUT IF THERE IS PARTICULAR PAIN REFERENCED TO THIS AREA FURTHER EVALUATION MAY BE WARRANTED. DEGENERATIVE CHANGES SEEN IN THE MID TO LOWER CERVICAL SPINE AND LUMBAR SPINE AS DESCRIBED ABOVE.

RESULT:

JAMES DAWKINS

10333402, 10333403, 10333401

CERVICAL, THORACIC AND LUMBAR SPINE, 9/24/08, 10:56 HOURS.

INDICATION: PAIN

Initial cross-table views of the cervical spine show no malalignment. AP and odontoid views are then obtained. There is degenerative disk change from C4 inferiorly. I see no fracture, dislocation or soft tissue injury.

AP and lateral views of the thoracic spine show some apparent lateral wedging of T4. I do not see a cortical disruption but the possibility of an acute compression of this site may need to be considered. No additional thoracic spine abnormality seen

AP lateral and spot lateral views of the lumbar spine show retrolisthesis of L5 on S1 with degenerative disk change and discogenic vertebral sclerosis. Alignment is, otherwise, normal. I see no compression fractures.

STUDY:
Left shoulder MRI.

CLINICAL HISTORY:
Shoulder injury in motor vehicle accident.

TECHNIQUE:
The following sequences were obtained through the left shoulder: Axial gradient echo; sagittal-oblique and coronal-oblique T1, fat-saturated T2, and fat-saturated proton density.

FINDINGS:
There is some thickening and mild intrasubstance signal abnormality within the distal supraspinatus tendon, suggesting tendinopathy/partial tear. There is no evidence for full thickness tear. The infraspinatus, teres minor, and subscapularis tendons appear intact. The muscles of the rotator cuff appear intact and there is no evidence for atrophy or fatty infiltration.

Evaluation of the osseous structures reveals some irregularity and subchondral cystic changes within the humeral head laterally, likely degenerative. There is no evidence for fracture, bone contusion, stress-related injury, or avascular necrosis. The contours of the superior humeral head and glenoid appear intact. There is evidence for acromioclavicular joint osteoarthritis with joint space narrowing and moderate surrounding fluid.

The long head of the biceps tendon is situated within the bicipital groove and its attachment o the superior glenoid labram appears grossly intact.

The glenoid labra appears grossly unremarkable, although definitive assessment is limited in the absence of intraarticular contrast.

There is trace amount of fluid within the subacromial/subdeltoid bursa, which in the absence of a full

Date of Birth: [redacted] Date of Service: 10/22/2008

thickness rotator cuff tear, could indicate a mild bursitis.

IMPRESSION:

1. Tendinopathy/partial tear of the distal supraspinatus tendon.
2. Trace amount of fluid within subacromial/subdeltoid bursa, which in the absence of a full thickness tear, could indicate a very mild bursitis. Clinical correlation is required.
3. Some irregularity and subchondral cystic changes within the lateral humeral head, likely degenerative.
4. Acromioclavicular osteoarthritis, as outlined above, which can predispose to rotator cuff impingement.

NEUROLOGICAL:
Paralysis no. Frequent Headaches no

Reason for Appointment
1. SHC:LT SHOULDER PAIN
2. REFERRED BY HARLICIA FARLEY MD

History of Present Illness
History of Present Illness:
What: Left Shoulder, lower back, and left leg pain. When: 9/24/08. How: MVA . Pain: satisfactorily controlled, Severity: pain = 7, sharp, aching, constant.
HPI:
Referral from Harlicia Farley, M.D. This man is 58, with problems with his pain into his left shoulder anterolaterally with some achiness into his lower back. His shoulder symptoms began after an MVA on 09/24/08, as did his back symptoms and now he has pain with overhead things. Some stiffness into his lower back, nothing really radiating down below either knee, nor calf, nor foot. Has not really had any treatment of this yet. Denies any loss of consciousness. Was seen at the hospital in triage there, though did not have all of his studies. Shoulder pain is more anterior superiorly.

Vital Signs
Ht: 73, Wt lbs: 225, BMI: 29.68, HR: 80.

Examination
General:
General Appearance: Well and in no acute distress. Neurological No neurologic deficits. Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lymphatic No lymphadenopathy present. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect. Skin No rashes, lesions, or ulcers, Normal turgur.
Examination:

Examination reveals a muscular mid-aged gentleman with good rotation of his neck with negative Spurling's bilateral. Tenderness of his left AC joint. Mild subacromial tenderness over the greater trochanter, but full vertical elevation. Fair cuff strength on isolation. Belly-press and lift-off are both intact. Good infraspinatous strength, good AP stability. External rotation over 90 in abduction. Full range of motion of the elbow and wrist. Full range of motion of the right shoulder. He has good rotation of both hips without pain. Negative sciatic stretch

Seizures no. CVA/ITA no. Syncope no. Anxiety/Depression no. Tremors no. Speech Problems no. Feeling of hopelessness no. Sleep disturbance no. Vision Changes no.

EYES:
Decreased Vision no. Cataracts no.

RESPIRATORY:
COPD no. Asthma no. Persistant Cough no. Shortness of Breath no. Wheezing no. Pneumonia no.

ENT:
Loss of Hearing no. Sinusitis no. Headache no.

GASTROINTESTINAL:
GERD no. PUD/Gastritis no. Liver Problems no. Stomach Pain no. Diarrhea no. Abdominal Pain no. Nausea/Vomiting no. Black tar-like or bloody stool no.

SKIN:
no Rash, no. Dryness of Skin no. Ulcer no. Cancer no. Open sores no. New Moles no. Poor Healing no. Skin Infection no.

PSYCHIATRIC:
Depression no. Bipolar Disease no.

ENDOCRINE:
Diabetes no. Thyroid no. Heat intolerance no. Cold intolerance no.

HEME/LYMP:
Anemia no. Bleeding Problems no. Blood Transfusion no. Bruises no.

ALLERGIC/IMMUNOLOGIC:
Seasonal no. Iodine no. Food Allergies no.

MUSCULOSKELETAL:
Joint Swelling no. Muscle aches no. Joint Pain no. Pain in multiple joints no. Weakness no.

bilaterally and good strength throughout both. On outside studies, radiographs of the shoulder were negative and reviewed evidence of AC arthropathy.

Assessments

1. AC Osteoarthritis - 715.11 (Primary)
2. Subacromial Impingement - 726.19
3. Lower back pain - 724.2

Treatment

1. Others

I have injected the left shoulder with Depo-Medrol and lidocaine. We will get him into a rehab program for his shoulder and his back.

Procedures

Injection

Injection : After verbal consent obtained including a discussion of the risks, benefits, and alternatives, the patient wishes to proceed. Complications discussed include but not limited to: pain, infection, steroid flare, fat necrosis, skin discoloration, and injury to blood vessels or nerves. The anatomic sight was sterilized with alcohol/betadyne solution and under sterile conditions the anatomic sight was injected with a solution of local anesthetic and 1 cc of corticosteroid. The patient tolerated the procedure without immediate complications. Patient is instructed to call the office if any signs or symptoms of infection occur including significant increase in pain, warmth, redness or drainage at the injection sight Left Shoulder

Procedure Codes

J1030 Depomedrol
20610 Large Joint Injection

Initial Evaluation

Diagnoses

Left Shoulder	71941	JOINT PAIN-SHLDER
Left Spine	7242	LUMBAGO

General Information

Referred by Dr Geary with a diagnosis of L shoulder pain/OA at the AC joint and lumbar pain.
HPI: MVA as listed.
PMH: Kidney cancer 2008 that is clear at this time, lumbar discectomy 1980, controlled HTN.
Chronological Age: Years:
- Year(s) Old 58

History of Injury:
- MVA accident on 9-24-08 with pt reporting left sided impact.

Occupation:
- Pastor.

Treatment Guidelines:
- Evaluate and Treat

Additional Detail: As per Rx, Duration: 4 weeks

Subjective Examination

The medical history questionnaire has been completed and signed by the patient, reviewed by the evaluating therapist, and is on file. The patient has read and signed the Patient Rights and Consent for Treatment forms, they have been reviewed by the evaluating therapist, and are on file.
ADL / Functional Status:
- Premorbid status: Recreation/Athletics: Independent without difficulty. Current status: Recreation / Athletics: Unable to perform.

Chief Complaint:
- Pain: Current Severity: 8/10. Loss of Motion/Stiffness: Marked Degree. Loss of Function: Moderate Degree. Weakness: Moderate Degree.

Client Knowledge/Awareness of:
- Home Exercise Program: Lacks appropriate program.

Denies:
- Spasm. Swelling. Instability/Giving Way.

Extremity Dominance:
- Right.

Functional Capability:
- Working Status: Without Restrictions. Raise Arm Overhead: Limited. Reach Behind Back: Limited.

Mechanism of Injury:
- Primary Episode: Motor Vehicle Accident: Car.

Medical History:
- General Health: Good.

Rehabilitation Expectations/Goals:
- Return to ADL Performance: Unrestricted/Minimal Symptoms. Return to Work Activities: Unrestricted/Minimal Symptoms.

Left Spine

The medical history questionnaire has been completed and signed by the patient, reviewed by the evaluating therapist, and is on file. The patient has read and signed the Patient Rights and Consent for Treatment forms, they have been reviewed by the evaluating therapist, and are on file.

ADL / Functional Status:
- Premorbid status: Recreation/Athletics: Independent without difficulty. Current status: Recreation / Athletics: Unable to perform.

Chief Complaint:
- Pain: Current Severity: 8/10. Abnormal Sensation: tingling from the lumbar spine to all toes at the L LE. Loss of Function: Moderate Degree.

Client Knowledge/Awareness of:
- Home Exercise Program: Lacks appropriate program.

Denies:
- Bowel/bladder frequency. Bowel/bladder urgency.

Functional Capability:
- Bend Forward at Waist: Significantly Limited. Sit Comfortably (15 min.): Limited. Walk 1/2 Mile,No Limp/Rest: Limited.

Mechanism of Injury:
- Primary Episode: Motor Vehicle Accident: Car.

Medical History:
- Past/Present Conditions: Cancer: Kidney that is clear at this time per pt. Surgeries: Lumbosacral Spine: Microdiscectomy: L 4-5.

Rehabilitation Expectations/Goals:
- Return to Work Activities: Unrestricted/Minimal Symptoms. Return to ADL Performance: Unrestricted/Symptom Free.

Objective Examination

Assessment of the joint complex above and below the shoulder demonstrated no abnormal findings and all appropriate tests were negative.

Muscle Testing: Upper Extremity MMT:	**Left**	**Right**
• Shoulder Flexion	3/5	4/5
• Shoulder External Rotation	3/5	-4/5
• Shoulder Internal Rotation	3/5	4/5
Palpation: Bony Structures: Tenderness:	**Left**	
• Acromioclavicular Joint	3=Wincing and withdrawl	

Palpation:
- Excess bony growth at distal clavical L AC joint.

Posture:
- Forward Head/Rounded Shoulders: Mild.

Range of Motion:	**Left AROM**	**Right AROM**
• Flexion	145	170
• Abduction	140	170
• External Rotation - 0 deg	50	65

Reflex/Sensory Integrity:
- Intact and Equal Bilaterally.

Special Tests: Muscle/Tendon:	**Left**
• Drop Arm-Rotator Cuff	Negative
• Elevation-Impingement	Aggravates Symptoms
• Empty Can	Negative
• Hawkins-Kennedy Impingement	Aggravates Symptoms
• Speed's Biceps	Negative
Special Tests: Ligamentous/Capsular:	**Left**
• AC Joint Compression	Positive

Special Tests: Clearing Examination: Cervical Range of Motion:

• Active Extension	60 Degrees
• Active Flexion	80 Degrees
• Active Rotation Left	40 Degrees
• Active Rotation Right	75 Degrees

Left Spine

Pt demonstrates numbness in stocking/glove pattern at L LE.

Flexibility:	**Left**	**Right**
• Hamstrings	Moderate Restriction	Moderate Restriction
Joint Integrity/Mobility: L 01 - L 02:	**Left**	**Right**
• Central P-A	Normal	Normal
Joint Integrity/Mobility: L 02 - L 03:	**Left**	**Right**
• Central P-A	Normal	Normal
Joint Integrity/Mobility: L 03 - L 04:	**Left**	**Right**
• Central P-A	Normal	Normal
Joint Integrity/Mobility: L 04 - L 05:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful
Joint Integrity/Mobility: L 05 - S 01:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful

Observations:
- Pt able to perform normal sitting flexion in chair to grab bag off floor without pain or limitation while performing only 30 degrees motion with active lumbar flexion.

Palpation:
- Lumbosacral Region: Musculature, Posterior: Hyper-reactive with pain and wincing to light palpation over the erector spinea of the L4-5 region and L PSIS.

Range of Motion: Lumbar Degrees:

• Active Extension	15 Degrees
• Active Flexion	30 Degrees
• Active Rotation Left	15 Degrees
• Active Rotation Right	15 Degrees

Special Tests: Neural Dynamics:	**Left**	**Right**
• Sciatic Nerve Tension	Negative	Negative
Special Tests: Lumbar:	**Left**	**Right**

• Slump	Negative
• Straight Leg Raise	Hamstring Tightness Hamstring Tightness

Special Tests:
- Pt states L AC joint pain with slump test at the L LE.

Treatments

Exercise Activities: Isotonics:

• External Rotation Sidelying.	Time Elapsed: 4 Minutes, Weight - Pounds: 0 Pounds, Repetitions: 10, Sets: 2
• Flexion.	Time Elapsed: 4 Minutes, Weight - Pounds: 0 Pounds, Repetitions: 10, Sets: 2, Position: Supine

Pt./Family Education:

• Daily Education	Taught to: Patient, Family: Not Included, Learning Assessment: Basic Concept, Barriers to Learning: None Identified, Teaching Method: Demonstration, Response to Teaching: Able to Demo, Pt/Family Perception: Important to Learn
• Exercise Rationale	Time Elapsed: 3 Minutes
• Pathology/Involved Anatomy	Time Elapsed: 3 Minutes
• Written Home Exercise Program	Time Elapsed: 3 Minutes, Activity: Provided & Reviewed, Description: Diagnosis Specific

Left Spine

Exercise Activities: Flexibility(L. Quarter):

• Hamstring Muscle	Time Elapsed: 3 Minutes, Repetitions: 7, Technique: Active, Body Position: Supine, Hold.: 15 Seconds
• Flexibility Activity 1	Time Elapsed: 3 Minutes, Repetitions: 5, Technique: Active Assistive, Hold.: 15 Seconds, Description: single knee to chest

Exercise Activities: Range of Motion:

• Rotation	Time Elapsed: 4 Minutes, Side: Bilateral, Technique: Active, Body Position: Seated, ROM Performed: Pain Free
• ROM Activity 1	Time Elapsed: 4 Minutes, Repetitions: 30, Sets: 1, Technique: Active, Body Position: supine, Description: supine knees together rotation

Pt./Family Education:

• Daily Education	Taught to: Patient, Family: Not Included, Learning Assessment: Basic Concept, Barriers to Learning: None Identified, Teaching Method: Demonstration, Response to Teaching: Able to Demo, Pt/Family Perception: Important to Learn
• Pathology/Involved Anatomy	Time Elapsed: 3 Minutes
• Written Home Exercise Program	Time Elapsed: 4 Minutes, Activity: Provided & Reviewed, Description: hamstring stretching,knee to chest, trunk rotation

Assessment

In my professional opinion, this client requires skilled rehabilitative therapy in conjunction with a home exercise program to

address the problems and achieve goals outlined below. Overall rehabilitation potential is fair. The functional problems and goals identified herein which necessitate skilled rehabilitation therapy over the next 45 days are outlined below. The patient and/or family were educated regarding their diagnosis, prognosis and related pathology. The client exhibits good understanding and performance of the therapeutic activity and instructions outlined in this skilled rehabilitation session. The client tolerated today's treatment/therapeutic activity with moderate complaints of pain and difficulty.

Impairments Identified:

- Flexibility. Functional Activities. Muscle Performance. Pain. Posture. Range of Motion. Weakness.

Presentation:

- Displays signs and symptoms of: Hyper-reactive and symptoms not consistant with neural pain secondary to non-dermatomal pattern of pain at the L LE and mild Waddel symptoms for non-organic back pain. Pt symptoms are not consistant with any form of appropriate referral pattern and are scatterd from LE to UE.

Recommendations:

- Monitor symptoms for provacation/reduction and hyper-reactivity.

Problems & Goals

Problem #1 **Functional Capability: Raise Arm Overhead: Limited.**

LTG Achieve by Dec 24, 2008.

Functional Improvements In:

- WFL flexion in sitting to allow for proper motion/mobility with overhead reaching.

Problem #2 **Client Knowledge/Awareness of: Home Exercise Program: Lacks appropriate program.**

STG Achieve by Dec 10, 2008.

Client Education:

- Independent Home Exercise/Self Care Program.

Problem #3 **Range of Motion.**

LTG Achieve by Dec 24, 2008.

Range of Motion Improvements to: Shoulder:	**Left AROM**
• Flexion	170
• Abduction	170
• External Rotation - 0 deg	65

Problem #4 **Muscle Testing: Upper Extremity MMT.**

LTG Achieve by Dec 24, 2008.

Musculoskeletal Improvements In: Upper Extremity Strength to:	**Left**
• Shoulder Abduction	+4/5
• Shoulder Flexion	+4/5
• Shoulder External Rotation	+4/5

Left Spine

Problem #5 **Functional Capability: Sit Comfortably (15 min.): Limited.**

LTG Achieve by Dec 24, 2008.

Increase sitting tolerance to greater than 1 hour with mild limitations to allow for proper mobility with work/travel demands.

Problem #6 **Client Knowledge/Awareness of: Home Exercise Program: Lacks appropriate program.**

LTG Achieve by Dec 17, 2008.

Client Education:

- Independent Home Exercise/Self Care Program.

Problem #7 **Flexibility.**

LTG Achieve by Dec 24, 2008.

Musculoskeletal Improvements In: Soft Tissue Flexibility to:	**Left**	**Right**
• Hamstrings	Slight Restriction	Slight Restriction

Plan

Amount, Frequency and Duration:

- Frequency and Duration: It is recommended that the client attend rehabilitative therapy for 2 visits a week with an expected duration of 6 weeks. Interventions during the course of treatment will be directed toward addressing the problems and achieving the goals previously outlined.

Daily Plan:

- Continue w/ Current Rehabilitation Program.

Therapeutic Contents:

- Client Education. Home Exercise Program. Passive Range of Motion Activities. Manual Range of Motion Activities. Stretching/Flexibility Activities. Aerobic Conditioning: Upper Body Ergometer. Joint Mobilization Techniques. Soft Tissue Mobilization Techniques. Modalities: Cryotherapy.
- Resistive Activities:
  - Isotonic. Tubing/Bands.

Left Spine

Amount, Frequency and Duration:

- Frequency and Duration: It is recommended that the client attend rehabilitative therapy for 2 visits a week with an expected duration of 6 weeks. Interventions during the course of treatment will be directed toward addressing the problems and achieving the goals previously outlined.

Daily Plan:

- Continue w/ Current Rehabilitation Program.

Therapeutic Contents:

- Client Education. Home Exercise Program. Passive Range of Motion Activities. Manual Range of Motion Activities. Active Assistive Range of Motion Activities. Active Range of Motion Activities. Stretching/Flexibility Activities. Proprioceptive/Closed Kinetic Chain Activities. Aerobic Conditioning: nustep Modalities: Cryotherapy.
- Resistive Activities:
  - Isometric. Machines/Free Weights.

(864) 234-5800

PatientID: [redacted]
Patient Name: JAMES L DAWKINS
Date of Birth: [redacted] **Date of Service: 11/20/2008**

PATIENT: James Dawkins
A/C#: 102544
SSN:
DOB: [redacted]
DATE: 11/20/08

HISTORY: James Dawkins is a 58-year-old gentleman who presents today for followup. He is hypertensive. Blood pressure is elevated. He is taking rather high dose of Cardizem LA 420 mg and also metoprolol 200 mg a day. He denies any cardiac history. He had back pain in the past and surgery. He also has a recent motor vehicle accident; however, denies stick any hand sets is present. He had history of right kidney biopsy. Apparently, was a questionable malignant lesion and, however, he denies any nephrectomy. He has had renal impairment. Last serum creatinine was in March 2nd. He tells me that he had lab work done a month ago; however, I could not see any record in his EMR. We will look for that in the lab if he had blood work done, otherwise, we will repeat this particularly to see his renal function. He has gout, on allopurinol 100 mg. He has obesity. I have discussed diet, exercise, and weight reduction. I have recommended baby aspirin for chemoprophylaxis. I have suggested him on change his blood pressure medication, atenolol/chlorthalidone 100/25 mg once day. Started with benzapril 40 mg. He is started with half pill a day then increase to four pills in two weeks if his blood pressure elevated. This should better control his blood pressure and will have less inotropic effect then beta-blocker and gastrointestinal channel blocker together and should better control his blood pressure. He denies any shortness of breath, chest pain, urinary symptoms, change in bowel habits, hematemesis, or melena. He apparently had PSA done in the last year and that was normal. He denies any hematemesis, melena, or weight loss.

REVIEW OF SYSTEMS: Otherwise negative. He had colonoscopy done this year with gastroenterologist, which was normal.

PHYSICAL EXAMINATION: No acute distress. Elevated blood pressure. O2 saturation is 99%. No pallor. Neck: Supple. No lymph node enlargement. No bruits. Chest: Clear. Heart: No murmur. Abdomen: Soft, nontender, and nondistended. No liver, spleen, kidneys, or mass felt. Lower extremity examination: No edema. Peripheral pulses are palpable.

EKG shows sinus bradycardia rate of 59. Incomplete right bundle-branch block and nonspecific ST-T changes. This is a baseline EKG due to his hypertension.

PLAN: He was given flu shot for preventative care. We will re-evaluate after his labs. Change in medication to Tenoretic 100/25 mg one a day and benzapril 40 mg start with half a day. Baby aspirin for chemoprophylaxis. His lipid profile in the last one year was normal. I have discussed risk factor management for coronary artery disease. Various pains, Tylenol PM for pain. Avoid NSAIDs due to his renal impairment. He will increase allopurinol 300 mg a day for his gout and elevated uric acid level.

Sushil Mittal, M.D.

Daily Note

Diagnoses

Left Shoulder	71941	JOINT PAIN-SHLDER
Left Spine	7242	LUMBAGO

General Information

Referred by Dr Geary with a diagnosis of L shoulder pain/OA at the AC joint and lumbar pain.
HPI: MVA as listed.
PMH: Kidney cancer 2008 that is clear at this time, lumbar discectomy 1980, controlled HTN.
Chronological Age: Years:
- Year(s) Old 58

History of Injury:
- MVA accident on 9-24-08 with pt reporting left sided impact.

Occupation:
- Pastor.

Treatment Guidelines:
- Evaluate and Treat

Additional Detail: As per Rx, Duration: 4 weeks

Subjective Examination

Chief Complaint:
- Pain: Current Severity: 8/10.

Client Knowledge/Awareness of:
- Home Exercise Program: Lacks appropriate program.

Daily Comments:
- No New Complaints. Overall Condition is: Improving.

Functional Capability:
- Raise Arm Overhead: Limited.

Left Spine

Chief Complaint:
- Pain: Current Severity: 8/10.

Client Knowledge/Awareness of:
- Home Exercise Program: Lacks appropriate program.

Daily Comments:
- Disposition: Sore Today. Overall Condition is: Unchanged. Pt states: "After my back surgery, the doctor told me that I had sciatic nerve damage. It didnt really hurt me until after the accident.
  I was on disability for 15 yrs with my back."

Functional Capability:
- Sit Comfortably (15 min.): Limited. Walk 1/2 Mile,No Limp/Rest: Limited.

Objective Examination

Muscle Testing: Upper Extremity MMT:	**Left**	**Right**
• Shoulder Flexion	3/5	4/5
• Shoulder External Rotation	3/5	-4/5
• Shoulder Internal Rotation	3/5	4/5

Range of Motion:	**Left AROM**	**Right AROM**
• Flexion	145	170
• Abduction	140	170
• External Rotation - 0 deg	50	65

Special Tests: Muscle/Tendon:	**Left**
• Drop Arm-Rotator Cuff	Negative
• Elevation-Impingement	Aggravates Symptoms
• Empty Can	Negative
• Hawkins-Kennedy Impingement	Aggravates Symptoms
• Speed's Biceps	Negative

Special Tests: Ligamentous/Capsular:	**Left**
• AC Joint Compression	Positive

Special Tests: Clearing Examination: Cervical Range of Motion:	
• Active Extension	60 Degrees
• Active Flexion	80 Degrees
• Active Rotation Left	40 Degrees
• Active Rotation Right	75 Degrees

Left Spine

Pt points to anterior thigh from hip to knee as location of discomfort with prolonged riding.

Flexibility:	**Left**	**Right**
• Hamstrings	Moderate Restriction	Moderate Restriction

Joint Integrity/Mobility: L 04 - L 05:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful

Joint Integrity/Mobility: L 05 - S 01:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful

Observations:
- Pt able to perform normal sitting flexion in chair to grab bag off floor without pain or limitation while performing only 30 degrees motion with active lumbar flexion.

Palpation:
- Lumbosacral Region: Musculature, Posterior: Hyper-reactive with pain and wincing to light palpation over the erector spinea of the L4-5 region and L PSIS.

Range of Motion: Lumbar Degrees:	
• Active Extension	15 Degrees
• Active Flexion	30 Degrees
• Active Rotation Left	15 Degrees

• Active Rotation Right	15 Degrees	
Special Tests: Lumbar:	**Left**	**Right**
• Slump	Negative	
• Straight Leg Raise	Hamstring Tightness	Hamstring Tightness

Treatments

Pt./Family Education:	
• Daily Education	Taught to: Patient, Family: Not Included, Learning Assessment: Basic Concept, Barriers to Learning: None Identified, Teaching Method: Demonstration, Response to Teaching: Able to Demo, Pt/Family Perception: Important to Learn
Left Spine	
Exercise Activities: Flexibility(L. Quarter):	
• Hamstring Muscle	Time Elapsed: 3 Minutes, Repetitions: 7, Technique: Active, Body Position: Supine, Hold.: 15 Seconds
• Flexibility Activity 1	Time Elapsed: 3 Minutes, Repetitions: 5, Technique: Active Assistive, Hold.: 15 Seconds, Description: single knee to chest
Exercise Activities: Range of Motion:	
• Rotation(This visit)	Did Not Perform: This visit
• ROM Activity 1	Time Elapsed: 3 Minutes, Repetitions: 30, Sets: 1, Technique: Active, Body Position: supine, Description: supine knees together rotation
Exercise Activities: Stabilization Training: Supine Position:	
• Abdominal Brace(This visit)	Did Not Perform: This visit
• Bridging	Time Elapsed: 4 Minutes
• Heel Slides	Time Elapsed: 4 Minutes
• Marching In Place	Time Elapsed: 3 Minutes
Exercise Activities: Isometrics:	
• Abduction Hip(This visit)	Did Not Perform: This visit
• Adduction Hip(This visit)	Did Not Perform: This visit
Exercise Activities: Stabilization Training: Quadruped Position:	
• Alternating LE Lift(This visit)	Did Not Perform: This visit
• Alternating UE/LE Lift(This visit)	Did Not Perform: This visit
Manual Interventions: Manual Traction:	
• Lower Extremity	Time Elapsed: 15 Minutes, Side: L, Technique: Long Axis hip/lateral hip distracion
Manual Interventions: Range of Motion:	
• Manual ROM 1	Time Elapsed: 8 Minutes, Description: sciatic nerve glides
Pt./Family Education:	
• Daily Education	Taught to: Patient, Family: Not Included, Learning Assessment: Basic Concept, Barriers to Learning: None Identified, Teaching Method: Demonstration, Response to Teaching: Able to Demo, Pt/Family Perception: Important to Learn

Assessment

The client tolerated today's treatment/therapeutic activity with mild complaints of pain and difficulty.
Presentation:

- Pt will continue to benefit from manual work pending on symptoms following todays treatment to reduce pain at the anterior thigh. Core strengthening and appropriate progression is appropriate at this time.

Plan

Daily Plan:

- Continue w/ Current Rehabilitation Program. Advance as tolerated.

Left Spine

Daily Plan:

- Continue w/ Current Rehabilitation Program. Advance as tolerated.

Recommendations:

- Assess response to todays treatment with continued manual as able.

Assessment

The client tolerated today's treatment/therapeutic activity with mild complaints of pain and difficulty.
Presentation:
- Pt presents today with signs of trochanteric bursitis and tightness at the IT band that will benefit from flexability of the tissue and continued stabilization therex for the lumbar spine secondary to chronic pain at the spine.

Plan

Daily Plan:
- Continue w/ Current Rehabilitation Program. Advance as tolerated.

Left Spine

Daily Plan:
- Continue w/ Current Rehabilitation Program.

Recommendations:
- continue with IT band therex and stretching/stabilization.

Blood in urine no. Pain in urinating no. Unable to urinate no. Bladder Infection no. Frequent Urination no. Difficulty with urination no.
NEUROLOGICAL:
Paralysis no. Frequent Headaches no.

Reason for Appointment
1. SHC LEFT SHOULDER INJURY

History of Present Illness
Interim History:
Prior Assessment Left Shoulder AC OA. Subacromial Impingement. Lower Back Pain. Date of Injury: 9/24/08 MVA. Treatment to Date: Steroid Injection Left Shoulder 11/12/08, Physical Therapy, Home Exercise Program. Response to treatment: patient states feeling worse since last visit with the lower back pain. Pain: not satisfactorily controlled, sharp, constant, Severity: pain = 7/10.
HPI:
The patient is a 58-year-old male who we are following for a left shoulder subacromial impingement and low back pain following a motor vehicle accident on September 24. The patient states his shoulder is doing fine now. He had a subacromial injection when last seen in clinic in November. He is still concerned about his low back pain and pain radiating down his left lower extremity. The patient states the pain is worse with activity. He describes the pain as radiating down his left anterior thigh, down the front of his leg into his foot. He also complains of some paresthesias in the same distribution. Of note, he has a history of lower back surgery in the 80s which he thinks was a diskectomy.

Vital Signs
Ht: 73,, Wt lbs: 225, BMI: 29.68, HR: 80.

Examination
General:
General Appearance: Well and in no acute distress. Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect.
Examination:

On physical examination today he does have a well-healed scar that is midline lumbar spine. He is tender in his left paraspinal muscles and lumbar spine. He has a positive straight leg raise in the left with pain radiating down his posterior thigh. He has 5 out of 5 dorsiflexion and plantarflexion strength is 4+/5. The EHL strength sensation is decreased to light tough throughout his left lower extremity. His

Procedure: 12/22/2008 09:09:00

REPORT

Exam :MRI LUMBAR SPN W/WO CON

See Below for Report
IMPRESSION:
MULTILEVEL MILD DEGENERATIVE DISC DISEASE IN LOWER LUMBAR SPINE ARE PRESENT WITH MILD CENTRAL CANAL STENOSIS AT L3-4 AND L4-5 WITHOUT SUBSTANTIAL CHANGE FROM 10/11/07.
AT L5-S1 POSTOPERATIVE CHANGES ARE SEEN WITH ENHANCING EPIDURAL GRANULATION TISSUE BUT NO RECURRENT DISC PROTRUSION. NO SIGNIFICANT CHANGE FROM PRIOR EXAM IS NOTED.

RM600166 - MRI LUMBAR SPN W/WO CON 12/22/2008 9:09 AMEXAM#: 10463152
ORDERED BY: Dr. STEPHEN GEARY, MD
REASON FOR EXAM: LOWER BACK PAIN, RADICULOPATHY------
RESULT:JAMES DAWKINS
MRI OF LUMBAR SPINE 12/22/08
HISTORY: Low back pain, radiculopathy.
Sagittal T1 weighted, fast spin echo T2 weighted and STIR images of the entire lumbosacral spine were obtained with axial T1 weighted and T2 weighted images from mid body of L2 to mid body of L4 and mid body of L4 to mid body of S1. After 20 ml IV Magnevist axial T1 weighted images were repeated with fat suppression and sagittal I1 weighted fat suppressed images were obtained as well.
Comparison is made to prior MRI of lumbar spine performed 7/11/07.
At the L2-3, L3-4 and L4-5 intervertebral disc space levels the discs are mildly desiccated and degenerated without evidence of focal disc protrusion or spinal stenosis. The pedicles are congenitally short and in combination these abnormalities result in mild central canal narrowing at L3-4 and L4-5.
At the L5-S1 intervertebral disc space level changes from left

laminotomy for discectomy are noted to be present. I do not see evidence to suggest recurrent disc protrusion. There does appear to be enhancing epidural granulation tissue in the left anterior epidural space surrounding the exiting nerve roots. There does appear to be a posterior central broad based osteophytic spur and disc bulge. The disc is desiccated and degenerated to a severe degree at this level with severe secondary discovertebral change. Vacuum disc phenomenon is likely present.
The marrow signal intensity demonstrates no evidence of focal marrow edema to suggest fracture, infection or tumor. Conus medullaris terminates in normal fashion. Retroperitoneal and paravertebral soft tissues demonstrate no significant evidence of additional abnormalities.

• Drop Arm-Rotator Cuff	Negative
• Elevation-Impingement	Aggravates Symptoms
• Empty Can	Negative
• Hawkins-Kennedy Impingement	Aggravates Symptoms

• Speed's Biceps	Negative
Special Tests: Ligamentous/Capsular:	**Left**
• AC Joint Compression	Positive
Special Tests: Clearing Examination: Cervical Range of Motion:	
• Active Extension	60 Degrees
• Active Flexion	80 Degrees
• Active Rotation Left	40 Degrees
• Active Rotation Right	75 Degrees

Left Spine

Palpation:

• Complaint of pain with palpation of the L trochanter.

Flexibility:	**Left**	**Right**
• Iliotibial Band	Mild Restriction	
• Hamstrings	Moderate Restriction	Moderate Restriction
Joint Integrity/Mobility: L 04 - L 05:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful
Joint Integrity/Mobility: L 05 - S 01:	**Left**	**Right**
• Central P-A	Normal/painful	Normal/painful

Observations:

• Pt able to perform normal sitting flexion in chair to grab bag off floor without pain or limitation while performing only 30 degrees motion with active lumbar flexion.

Palpation:

• Lumbosacral Region: Musculature, Posterior: Hyper-reactive with pain and wincing to light palpation over the erector spinea of the L4-5 region and L PSIS.

Range of Motion: Lumbar Degrees:	**Nov 19, 2008**	**Dec 10, 2008**
• Active Extension	15 Degrees	15 Degrees
• Active Flexion	30 Degrees	30 Degrees
• Active Rotation Left	15 Degrees	15 Degrees
• Active Rotation Right	15 Degrees	15 Degrees
Special Tests: Lumbar:	**Left**	**Right**
• Slump	Negative	
• Straight Leg Raise	Hamstring Tightness	Hamstring Tightness

Assessment

The client tolerated today's treatment/therapeutic activity with mild complaints of pain and difficulty.

Presentation:

• Pt presents today with signs of trochanteric bursitis and tightness at the IT band that will benefit from flexability of the tissue and continued stabilization therex for the lumbar spine secondary to chronic pain at the spine.

Recommendations:

• Discharge, Secondary to: Client Non-compliance: Attendance.

Problems & Goals

Problem #1 **Functional Capability: Raise Arm Overhead: Limited.**

LTG Achieve by Dec 24, 2008.

Functional Improvements In:

- WFL flexion in sitting to allow for proper motion/mobility with overhead reaching.

Problem #2 **Client Knowledge/Awareness of: Home Exercise Program: Lacks appropriate program.**

STG Achieve by Dec 10, 2008.

Client Education:

- Independent Home Exercise/Self Care Program.

Problem #3 **Range of Motion.**

LTG Achieve by Dec 24, 2008.

Range of Motion Improvements to: Shoulder:	**Left AROM**
• Flexion	170
• Abduction	170
• External Rotation - 0 deg	65

Problem #4 **Muscle Testing: Upper Extremity MMT.**

LTG Achieve by Dec 24, 2008.

Musculoskeletal Improvements In: Upper Extremity Strength to:	**Left**
• Shoulder Abduction	+4/5
• Shoulder Flexion	+4/5
• Shoulder External Rotation	+4/5

Left Spine

Problem #5 **Functional Capability: Sit Comfortably (15 min.): Limited.**

LTG Achieve by Dec 24, 2008.

Increase sitting tolerance to greater than 1 hour with mild limitations to allow for proper mobility with work/travel demands.

Problem #6 **Client Knowledge/Awareness of: Home Exercise Program: Lacks appropriate program.**

LTG Achieve by Dec 17, 2008.

Client Education:

- Independent Home Exercise/Self Care Program.

Problem #7 **Flexibility.**

LTG Achieve by Dec 24, 2008.

Musculoskeletal Improvements In: Soft Tissue Flexibility to:	**Left**	**Right**
• Hamstrings	Slight Restriction	Slight Restriction

Plan

Discharge from Physical Therapy.

Daily Plan:

- Continue w/ Current Rehabilitation Program. Advance as tolerated.

Discharge due to:

- Non-compliance.

Recommendations:
- Discharge From Physical Therapy.

Left Spine

Discharge from Physical Therapy.
Daily Plan:
- Continue w/ Current Rehabilitation Program.

Discharge due to:
- Non-compliance.

Recommendations:
- continue with IT band therex and stretching/stabilization. Discharge From Physical Therapy.

Review of Systems
CONSTITUTIONAL:
Fever no. Weight Loss no. Weight Gain no. Fatigue no. Chills no. Night Sweats no.
CARDIOVASCULAR:
Chest Pain no. Irregular Heart Beat no. Poor Circulation no. Leg/feet swelling no. Leg/foot ulcer no.
GENITOURINARY:
Blood in urine no. Pain in urinating no. Unable to urinate no. Bladder Infection no. Frequent Urination no. Difficulty with urination no.
NEUROLOGICAL:
Paralysis no. Frequent Headaches no

Reason for Appointment
1. SHR BACK AND SHLDR PAIN

History of Present Illness
Interim History:

Prior Assessment Left Shoulder AC OA. Subacromial Impingement. Lower Back Pain. Lumbar Radiculopathy. Date of Injury: 9/24/08 MVA. Treatment to Date: Steroid Injection Left Shoulder 11/12/08, Physical Therapy, Home Exercise Program, MRI Lumbar Spine 12/22/08. Response to treatment: patient states feeling the same since last visit. Pain: Severity: pain = 10.

Mr. Dawkins has been through some epidural injections and he is a little bit better in his back, still some symptoms in lower back and radiating down his legs some. His left shoulder is much better, starting with similar symptoms in his right shoulder. Anterolateral pain forward flexion with activity things requiring injection of this.

History of Present Illness:

What: Right Shoulder Pain and Right Upper Extremity Tingling.

Vital Signs
Ht: 73, Wt lbs: 225, BMI: 29.68, HR: 80.

Examination
General:

General Appearance: Well and in no acute distress.
Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect.

On exam, he currently has mildly positive impingement sign on the right, negative on the left, guards with forward flexion and internal rotation, against mild resistance, good intact supraspinatus and subscap strength. I do not appreciate any focal sensory motor deficit of either upper extremity.

Assessments
1. AC Osteoarthritis - 715.11 (Primary)
2. Subacromial Impingement - 726.19
3. Lower back pain - 724.2
4. Radiculopathy, Lumbar - 724.4

Treatment
1. AC Osteoarthritis

Seizures no. CVA/TIA no. Syncope no. Anxiety/Depression no. Tremors no. Speech Problems no. Feeling of hopelessness no. Sleep disturbance no. Vision Changes no.

RESPIRATORY:
COPD no. Asthma no. Persistant Cough no. Shortness of Breath no. Wheezing no. Pneumonia no.

ENT:
Loss of Hearing no. Sinusitis no. Headache no.

GASTROINTESTINAL:
GERD no. PUD/Gastritis no. Liver Problems no. Stomach Pain no. Diarrhea no. Abdominal Pain no. Nausea/Vomiting no. Black tar-like or bloody stool no.

SKIN:
no Rash, no. Dryness of Skin no. Ulcer no. Cancer no. Open sores no. New Moles no. Poor Healing no. Skin Infection no.

PSYCHIATRIC:
Depression no. Bipolar Disease no.

ENDOCRINE:
Diabetes no. Thyroid no. Heat intolerance no. Cold intolerance no.

HEME/LYMP:
Anemia no. Bleeding Problems no. Blood Transfusion no. Bruises no.

ALLERGIC/IMMUNOLOGIC:
Seasonal no. Iodine no. Food Allergies no.

MUSCULOSKELETAL:
Joint Swelling no. Muscle aches no. Joint Pain no. Pain in multiple joints no. Weakness no.

I have injected the right subhumeral space with Depo-Medrol and Lidocaine and I think this just warrants a conservative cuff and scapular rehab program. As far as his ongoing symptoms in his back, intermittently radiating into his leg, his previous MRI findings were faxed and he has been through a formal course of epidurals with still some symptoms and I would like to get a formal opinion from a spine specialist.

Procedures

Injection

Injection : After verbal consent obtained including a discussion of the risks, benefits, and alternatives, the patient wishes to proceed. Complications discussed include but not limited to: pain, infection, steroid flare, fat necrosis, skin discoloration, and injury to blood vessels or nerves. The anatomic site was sterilized with alcohol/betadine solution and under sterile conditions the anatomic site was injected with a solution of local anesthetic and 1 cc of corticosteroid. The patient tolerated the procedure without immediate complications. Patient is instructed to call the office if any signs or symptoms of infection occur including significant increase in pain, warmth, redness or drainage at the injection site right shoulder

Procedure Codes

ORDERED BY: Dr. TIMOTHY P. MCHENRY, MD
REASON FOR EXAM: NECK AND RT ARM PAIN------
RESULT:
PATIENT - JAMES L. DAWKINS
PROCEDURE:CERVICAL SPINE MRI, 3/13/09.
Indication: Neck and right arm pain.
Technique: Initial standard sequences are obtained. These include sagittal T1, T2 and STIR sequences and axial T2 fast spin echo and gradient recall images from the body of C2 to the body of T1. Because of a malignant history in this patient, additional axial T1 pre- and post-contrast images are obtained, along with sagittal T1 fat suppressed images post-contrast. 20 ml Magnevist is used for contrast.
Findings: None of the images shows any posterior fossa abnormality. The craniocervical junction is unremarkable. I see no suspicious marrow findings on any of the images. The visualized retroperitoneal structures show no abnormality. The pituitary shows normal

enhancement without evidence of mass. Sagittal image shows multi-level spinal stenosis at C3-4, C4-5, and C5-6, with very prominent posterior disc osteophyte complexes at these levels. Axial images are then reviewed.
C2-3 level shows no significant abnormality.
C3-4 level shows a moderate posterior disc osteophyte complex that is very broad with effacement of the ventral subarachnoid space. AP diameter of the canal at this level measures 8 mm. There is bilateral mild neural foraminal narrowing.
C4-5 level shows a large posterior disc osteophyte complex with a central protrusion with some caudad extension suggesting that this is actually an extrusion. This indents the thecal sac and effaces the subarachnoid space at this level. The AP diameter of the cord is just under 6 mm. There is uncovertebral joint hypertrophy and bilateral neural foraminal narrowing, severe on the right and moderate on the left.
The C5-6 level shows a large broad posterior disc osteophyte complex with a central protrusion with caudad extension which indents the cord. At its narrowest point, the AP diameter of the cord at the indention is about 6 mm. There is bilateral neural foraminal narrowing at this level. Narrowing does appear more extensive and severe on the right than the left where some of the uncovertebral joint hypertrophy appears to contact the lateral aspect of the cord.
The C6-7 level shows a much milder posterior disc osteophyte complex which is slightly more prominent at the right foraminal zone where there is severe neural foraminal narrowing. There is moderate neural foraminal narrowing on the left.
The C7-T1 level does not show significant abnormality.
The neural foramina at the T1-2 level are visualized and are patent as well.

such as buttoning and handwriting, as well as gait abnormalities, with instability or spasticity. He currently is not having any of these and his upper extremity symptoms have improved significantly. He would like to defer surgery at this time and proceed with further evaluation by his oncologist, and I think this is a very reasonable course of action. We did discuss that should he develop any signs of myelopathy in the interval, then I would like see him back immediately. Otherwise, we will follow up with him in 8 weeks time on a routine basis.

HPI:

Interim History:

Response to treatment: patient states feeling the same since last visit. Pain: 9/10.

HPI:

The patient is a 58-year-old gentleman who was referred by Dr. Geary for significant findings on a cervical spine MRI scan. His primary symptoms are right shoulder pain and radicular arm pain, predominantly down to his thumb. He was evaluated by Dr. Geary and was administered a subacromial injection in the right shoulder, which did not provide any relief.

Hospitalization/Major Diagnostic Procedure: See surgical history .

Family History: Family: Hypertension

Social History: no Alcohol. no Smoking. no Recreational drug use.

Medications: none none

Allergies: NKDA.

Objective:

Vitals: Ht: 73, Wt lbs: 235, BMI: 31.00, HR: 75.

Examination:

General

General Appearance: Well and in no acute distress. Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect.

Examination

I reviewed finger and hand dexterity symptoms and he has no convincing decreased function, although he does state that he does have some subjective decreased sensation intermittently bilaterally, greater on the right side, and occasional difficulty using his hands. No gait abnormalities. Bowel and bladder function is normal. Medical history significant for hypertension and a history renal cell carcinoma. On physical examination, neck range of motion is full in all planes. Spurling's maneuver to the right produces radiating arm pain down to the hand and thumb. Spurling's maneuver to the left is negative. Grip release is rapid in his bilateral hands. He has a positive Hoffman's bilaterally and negative finger escape bilaterally. He is able to do a normal tandem gait. Upper and lower extremities are 5/5 motor at all levels. Sensation is intact to light touch at all levels of his upper and lower extremities. Reflexes are symmetrical and 2+ in his brachioradialis, biceps, triceps, patellar and Achilles tendons. I reviewed MRI scan cervical spine from 03/13/2009. His subaxial spine is in neutral alignment. He has degenerative levels, primarily at C3-C4, C4-C5, C5-C6, and to a lesser degree at C6-C7. At the C3-C4 through C5-C6 levels, this results in significant spinal canal stenosis, measuring 5.5 mm at C4, C5, and 7.5 mm at C3-C4.

Assessment:

Assessment:

1. Spinal Stenosis Lumbar Region - 724.02 (Primary)

Plan:

1. Others

I discussed with the patient and his wife decompression surgery for his stenosis, as well as his radiculopathy. He is a nonsmoker and I think that anterior cervical discectomy and instrumented fusions at C3-C4, C4-C5 and C5-C6 with foraminotomy would likely alleviate his symptoms, as well as relieve the stenosis in his cervical spine and decrease his risk for developing myelopathy and/or having a central cord spinal cord injury. We discussed the risks of this surgery, including adjacent segment degeneration at C6-C7 and need for further procedure, dysphagia, chronic or temporary, dysphonia, chronic or temporary, risks of allograft, including transmission of AIDS or hepatitis, pseudarthrosis, paralysis, infection, risks of anesthetic, including medical events, including death. Due to the persistence of his symptoms, the patient would like to proceed with arrangements for the surgery. We will arrange this on elective basis.

Immunizations:

1. ENP LOWER BACK PER DR GEARY.

HPI:

HPI:

The patient is a 58-year-old gentleman who was in a motor vehicle collision in September of 2009. He had onset of back pain and left posterolateral radicular leg pain at that time. This has been persistent in spite of treatment including physical therapy, medications, and an epidural steroid injection. He underwent an epidural steroid injection at the beginning of January of 2009 done at the Carolina Center for the Advanced Management of Pain at the L5-S1 level. This reduced his leg symptoms approximately 50% for approximately 2 weeks before they recurred and are now back to prior to injection. He also developed some right radicular arm paresthesias, primarily down to his thumb following the accident and these have been persistent as well. They are worse while sleeping and in the morning. He has some of these symptoms on the left side as well, but not as severe. He localizes the radiation from his trapezius region down his arm to his thumb primarily.

Surgical History: Partial Right Kidney Removal. Dr. Hill and Dr. Cobb August 2008.

Hospitalization/Major Diagnostic Procedure: See surgical history .

Family History: Family: Hypertension

Social History: no Alcohol. no Smoking. no Recreational drug use.

Medications: none none

Allergies: NKDA.

Objective:

Vitals: Ht 73, Wt lbs 230, BMI 30.34, HR 60.

Past Orders:

Examination:

General:

General Appearance: Well and in no acute distress. Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect.

Grip release is rapid in his bilateral hands. He has a positive Hoffman's bilaterally. Negative finger escape bilaterally. He is able to do a normal tandem gait. His motor and sensory are intact at all levels of his upper and lower extremities.

Assessment:

Assessment:

1. Spinal Stenosis, Cervical - 723.0 (Primary)

1. Cervical spinal stenosis. I reviewed his MRI of the cervical spine which shows multilevel subaxial stenosis. Currently not manifesting significant clinical symptoms of myelopathy, and I reviewed these with him and his wife again today. We discussed the stepwise deterioration possible with cervical spondylotic myelopathy, and they are aware of the symptoms and concerns and the need to follow up expeditiously should he develop symptoms. 2. Lumbar spine degenerative disease: I reviewed his MRI scan of lumbar spine which showed a degenerative segment at L5-S1 with a left-sided laminotomy and significant decreased disc space. I discussed with them potential surgery at L5-S1 with revision decompression instrumented arthrodesis. I discussed guarded prognosis with the surgery for his component of low back pain. I think it is likely that his radicular leg pain would be significantly improved. They will consider this option as well as continue to monitor him for any signs of myelopathy; and at their request, I will follow up in four weeks time or sooner on a prn basis. .

Interim History:

Pain: 8/10, sharp, intermittent.

History of Present Illness:

Mr. Dawkins returns today for followup of his cervical spine and lumbar spine conditions. He reports that more recently, he has had an increase in his intermittent low back and left posterolateral radicular leg pain. No changes in his neck symptoms. He intermittently has numbness in his fingers but this is actually improved compared with previously.

Objective:

Vitals: Ht 73, Wt lbs 230, BMI 30.34, HR 60.

Past Orders:

Examination:

General:

General Appearance: Well and in no acute distress. Cardiovascular: Regular rhythm by palpation of distal pulse, normal color and temperature, no concerning varicosities on symptomatic side. Lungs: Breathing easily. Psychiatric: Well-oriented with a normal mood and affect.

Motor strength is 5/5 at all levels of his upper and lower extremities.

Assessment:

Assessment:

1. Spinal Stenosis, Cervical - 723.0 (Primary)

I discussed again the signs and symptoms of progression of myelopathy with him and the need to follow up expeditiously should they occur. Concerning his low back, we discussed that he may benefit from decompression and instrumented arthrodesis with surgery across the L5-S1 level where he has had surgery in the past. We discussed that the successful surgery would be significant alleviation of his activity-limiting symptoms that occur intermittently. He possibly would have a continued component of chronic low back pain although hopefully not activity limiting. .

Plan:

1. Spinal Stenosis, Cervical

At the present time, he would like to continue activity as tolerated and will follow up on a prn basis or call if he would like further discussion for lumbar spine surgery. We will see him back on a prn basis.

PatientID: [redacted]
Patient Name: JAMES L DAWKINS
Date of Birth: [redacted] **Date of Service: 09/30/2009**

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 09/30/09

HISTORY: James Dawkins is a 59-year-old gentleman who presents today for followup with multiple medical problems, chronic pain, degenerative arthritis, and hypertension. He also has renal impairment. Last serum creatinine was 2.1. He had elevated blood sugar. I have rechecked his blood sugar. If elevated, we will arrange hemoglobin A1c. He may be borderline diabetic. We will arrange hemoglobin A1c for the screening for diabetes. He complains of erectile dysfunction. I have given him prescription for Viagra. It seems to be working. He will also increase the benazepril to 40 mg and reduce Tenoretic to half pill to help with the erectile function. He denies any weight loss. He had about 7-8 pounds weight loss to voluntary effort. His pain is doing better. He has not had surgery on his back and neck. He denies any change in bowel habits, any hematemesis, or melena. He denies smoking, alcohol, or drug abuse. He was given flu shot today.

PHYSICAL EXAMINATION: No acute distress. Blood pressure is slightly elevated. O2 saturation is 99%. Neck: Supple. No lymph node enlargement. Chest: Clear. Heart: No murmur. Abdomen: Soft. Neurological examination: Normal.

ASSESSMENT/PLAN: Multiple medical problems are discussed above. Increase benazepril to 40 mg. Continue allopurinol for gout. Tylenol or Advil sparingly for various pains. Re-evaluate after his chemistry and hemoglobin A1c.

ADDENDUM: The patient's age is 59. The patient's impedance cardiogram shows heart rate of 52, systolic blood pressure 157, and diastolic 89. Mean arterial pressure is slightly elevated to 104. Systemic vascular resistance is increased. We will consider increasing dose of lisinopril and hydrochlorothiazide. We will increase the dose of benazepril to 40 mg a day.

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 10/23/09

HISTORY: James Dawkins presents today for followup for his numerous medical problems. He is feeling much better. He denies any shortness of breath, chest pain, urinary symptoms, any change in bowel habits, any hematemesis, or melena. He has numerous medical problems.

1. Hypertension. His blood pressure is better controlled. Continue benazepril, taking half a pill a day and Tenoretic 100/25 mg half a pill a day. I have encouraged him on lifestyle changes, including diet and exercise. I have reinforced risk factor management for coronary artery disease, including aspirin a day. His cholesterol is controlled. I have encouraged him on diet, exercise, and weight reduction. His lipid profile has been normal with a LDL of 90. He does not smoke. I have encouraged him on regular exercise. His baseline EKG earlier this year showed no ischemic changes.
2. Erectile dysfunction. I have given him samples of Levitra.
3. Renal impairment related to multiple medical conditions. His renal impairment has improved from serum creatinine is 2.2 to 1.9, and is more or less is stable. Continue monitoring and optimized blood pressure control.
4. He had elevated blood sugar. Fingerstick blood sugar in the office was 140. Hemoglobin A1c is 6.1. I have given him 200-calorie ADA diet. He had flu shot and Pneumovax.
5. Gout. This is stable. Continue allopurinol. He will follow up in three months. We will repeat his lab work.

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 12/14/09

History: James Dawkins is a 59-year-old gentleman who presents today for followup. He is hypertensive. His blood pressure is elevated today. He is apparently on Tenoretic half pill a day and benazepril half pill a day. We will increase the benazepril to a whole pill. I have given a new prescription. He had gout; however, denies any acute exacerbation. He had taken indomethacin 50 mg twice a day p.r.n. from another physician; however, is out of it. I advised him to avoid this; however, he could consider starting 25 mg b.i.d. p.r.n. if acute exacerbation of gout; however, his pain appears to be more related to degenerative arthritis. I have advised him Tylenol p.r.n. for pain and encouraged him on regular exercise. He has renal impairment. Serum creatinine has improved from 2.2 to 1.9. I have once again advised him to avoid NSAIDs. He had elevated blood sugar. His fingerstick blood sugar in the office was 133. Last hemoglobin A1c is 6.1. He is borderline diabetic. I have counseled him on lifestyle changes and cutting down sugars and carbohydrate. No diabetic medication particularly due to renal impairment. He has multiple risk factors for coronary artery disease. I have discussed risk factor management. I have arranged his stress test due to multiple risk factors for coronary artery disease. I have also arranged impedance cardiogram, and we will re-evaluate after this and optimize his blood pressure control. In the meantime, increased benazepril to 40 mg. He is encouraged on diet, exercise, and weight reduction for obesity. He was given H1N1 flu shot today. He had regular flu shot in the past. He denies any hematemesis, melena, hematochezia, any shortness of breath, or orthopnea.

PHYSICAL EXAMINATION: No acute distress. Vital signs: Elevated blood pressure. O2 saturation is 99%. Neck: Supple. Chest: Clear. Heart: No murmur. Abdomen: Soft. Neurological examination: Normal.

ASSESSMENT/PLAN: His weight is stable. We will re-evaluate after his CBC, chemistry, hemoglobin A1c, and lipid. I have added pravastatin 20 mg to reduce cardiovascular risk. Follow up in one month; however, we will change his medication depending on his labs and impedance cardiogram.

PAST MEDICAL HISTORY

MEDICAL HISTORY: **History of malignancy, Malignancy site includes renal, History of musculoskeletal disorder, history of gout, of the left knee.** (00:38 TMF)
SURGICAL HISTORY: **"Spot removed from kidney 9/2008 that was found to be cancerous" back surgery.** (00:38 TMF)
PSYCHIATRIC HISTORY: No previous psychiatric history. (00:38 TMF)
SOCIAL HISTORY: Denies alcohol abuse, Denies tobacco abuse, Denies drug abuse, Lives with others. (00:38 TMF)
FAMILY HISTORY: Family history is not contributory to this case. (00:38 TMF)
NOTES: Nursing records reviewed, Medication list reviewed. (02:05 KJG)

CURRENT MEDICATIONS (00:39 TMF)

Indomethacin: 50 milligram(s) by mouth as needed.
? BP medication

HPI KNEE (02:04 KJG)

CHIEF COMPLAINT: Patient presents for the evaluation of **left, knee swelling, knee pain.**
HISTORIAN: History obtained from patient.
MECHANISM: Complaint occurred by **No trauma by history.**
OCCURRED: Onset was **2 days prior to arrival , Patient currently has symptoms, Complaint is worse, Complaint is persistent.**
LOCATION: **diffuse.**
QUALITY: **Patient describes pain as aching, Patient describes pain as dull.**
SEVERITY: Maximum severity is **moderate,** Currently **symptoms are moderate.**
ASSOCIATED WITH: Patient denies inability to ambulate/bear weight, **Patient states pain on walking is present,** Patient denies hip pain, **Patient states knee pain is present,** Patient denies ankle pain, Patient denies foot pain, Patient denies distal neuro c/o.
EXACERBATED BY: Patient's condition exacerbated by **range of motion.**
RELIEVED BY: Patient's condition relieved by **nothing.**
NOTES: **h/o gout in left leg in past, 4 days ago had gout left foot, then traveled to left knee, + bedsheet tenderness.**
denie twisting or fb/puncture.

ROS (02:06 KJG)

CONSTITUTIONAL: No fever, No chills.
MUSCULOSKELETAL: **Historian reports joint stiffness,** No myalgias, No joint redness, No arthralgias, No fall, No injury.
NOTES: All relevant systems reviewed.

PHYSICAL EXAM (02:06 KJG)

CONSTITUTIONAL: Patient is afebrile, Vital signs reviewed, Patient has normal pulse, Patient has normal blood pressure, Patient has normal respiratory rate, Well appearing, Patient appears comfortable, Alert and oriented X 3.
HEAD: Normocephalic.
EYES: No discharge from eyes, Extraocular muscles intact.
ENT: Nose examination normal, Posterior pharynx normal.
RESPIRATORY CHEST: No respiratory distress.
UPPER EXTREMITY: Inspection normal, No cyanosis, No clubbing.
LOWER EXTREMITY: Inspection normal, No cyanosis, No clubbing, LEFT knee to have, no deformity, no ecchymosis, no lacerations, no hematoma, no erythema, no warmth, distal pulse intact, capillary refill less than 2 seconds, distal motor intact, distal sensory intact, **Swelling noted, Tenderness to palpation, Active range of motion, limited, Passive range of motion, limited.**
NEURO: No focal motor deficits, Speech normal, Memory normal.
SKIN: Skin is warm, Skin is dry, Skin is normal color.
PSYCHIATRIC: Oriented X 3, Normal affect, Normal insight, Normal concentration.
NOTES: **pastor, hurt to walk up to the podium today.**

DIAGNOSIS (02:03 KJG)

FINAL: PRIMARY: **Gout** .

Date of Birth: [redacted] **Date of Service: 09/08/2010**

North Hills Medical Center
800 Pelham Road
Greenville, SC 29615
(864) 234-5800

PatientID: [redacted]
Patient Name: JAMES L DAWKINS
Date of Birth: [redacted] **Date of Service: 09/08/2010**

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 09/08/10

HISTORY: James Dawkins presents today for followup for his numerous medical problems, hypertension, and renal impairment. Last serum creatinine was 1.9. He is apparently taking benazepril and tenoretic; however, did not bring medicine. I am not sure about the compliance of medication. His blood pressure is slightly elevated. He has erectile dysfunction and depression; however, he is not taking any antidepressant. He has numerous risk factors for coronary artery disease. I have once again discussed risk factor management. I have arranged his CBC, chemistry, and hemoglobin A1c due to borderline diabetes, and we will re-evaluate after this. I have once again discussed risk factor management for coronary artery disease. He is advised to bring all his medication in two weeks. He declined flu shot. He denies any shortness of breath, chest pain, urinary symptoms, significant weight change, hematemesis, or melena.

PHYSICAL EXAMINATION: No acute distress. Vital signs: Stable. O2 saturation is 98%. Elevated blood pressure. Neck: Supple. Chest: Clear. Abdomen: Soft.

ASSESSMENT/PLAN: He complains of pain in the knee particularly worse in the right knee. Examination shows positive swelling, increased warmth, and tenderness suggestive of acute exacerbation of gout. Under aseptic condition 80 mg of Kenalog with 2 cc of lidocaine was injected in the right knee. I have started on indomethacin 25 mg b.i.d. He will take three to four days, and I have advised him to use this sparingly in view of renal impairment, allopurinol 300 mg once a day, colchicine 0.6 mg twice a day for three to four days as needed for acute exacerbation, and also doxycycline 100 mg twice a day for two weeks. We will re-evaluate after his labs and follow up in one week. He declined flu shot.

Sushil Mittal, M.D.

NURSING ASSESSMENT: EXTREMITY UPPER (23:03 DGM)
CONSTITUTIONAL: Patient arrives ambulatory with steady gait to treatment area. History obtained from patient, Patient appears comfortable, Patient is cooperative, Patient is alert and oriented x 3, Patient's skin is warm and dry, Patient's mucous membranes are moist and pink, Complex assessment performed, Patient arrives to treatment area ambulatory, Patient **with steady gait, Patient appears in pain distress**, Skin color is normal, Skin temperature is warm.
LEFT UPPER EXTREMITY: No complaint of pain, Normal pulses, Brisk capillary refill, Sensation intact, No numbness/tingling, Full range of motion.
RIGHT UPPER EXTREMITY: Normal pulses, No numbness/tingling, Area of assessment is **elbow**, Pain is to **medial aspect, Pain level 10 Hurts Worst, using faces pain scoringQuality is sharp FLACC Pain Scale: 0(Face:0,, Legs:0,, Activity:0,, Cry:0,, Consolability:0,), On a scale 0–10 patient rates pain as 10,** Pain non–radiating, **Swelling, Temperature is normal**, Capillary refill is brisk, **Partial range of motion.**
NOTES: **C/o of right elbow pain, onset thursdaqy am. Hx of gout.**
SAFETY: Side rails up, Cart in lowest position, Family at bedside.

NURSING PROCEDURE: JOINT CARE (Fri Sep 24, 2010 01:15 RAK)
TIME: Sling applied, Patient tolerated procedure well.

NURSING PROCEDURE: DISCHARGE NOTE (Fri Sep 24, 2010 01:15 RAK)
TIME: Patient discharged at 0110, Patient discharged to, home, Patient, ambulates without assistance, Transported via friend/family driving, Accompanied by husband/wife/spouse, Discharge instructions given to, patient, Simple/moderate discharge teaching performed, Teaching performed by rachel king,rn, Name of prescription(s) given: colchicine, Prescription given and additional instructions on side effects of same given, Medication reconciliation form given to patient, Above Person(s) verbalized understanding of discharge instructions and follow–up care, Patient treated and evaluated by physician.
VITAL SIGNS: BP: 128, / 83, Pulse: 84, Resp: 16, O2 sat: 98, on: ra, Time: 0110.

INSTRUCTION (Fri Sep 24, 2010 00:26 SYT)
DISCHARGE: ACUTE GOUTY ARTHRITIS.
FOLLOWUP: Medical Center North Hills (Pelham), Family Practice, 800 Pelham Rd., Greenville SC 29615, 864–234–5800.
SPECIAL: * Advance activity as tolerated.
* Encourage fluids.
* Follow–up with primary care physician within 1 week.
* Return if worse, or if new problems develop.
* Take medications as prescribed.
If you have any questions or concerns about your care in the Emergency Dept, please email us: CarolinaEmergency@bellsouth.net
Your doctor in the Emergency Dept. was Dr. Song–Yih Tu, MD, FAAEM.

DISPOSITION
PATIENT: Disposition: Discharge home, Condition: Stable. (Fri Sep 24, 2010 01:05 SYT)
Remove from ER. (Fri Sep 24, 2010 01:17 RAK)

MEDICATION RECONCILIATION (Fri Sep 24, 2010 00:25 SYT)
High b/p med unsure of name – Continue as previously prescribed: (No Reconciliation Information).
Indomethacin – Continue as previously prescribed: 50 milligram(s) by mouth as needed.
ADDITIONAL NOTES: Reviewed with patient.

Colchicine: 0 milligram(s) twice daily. mg x 0.6 Mg – Oral – BID.
Indomethacin: 50 milligram(s) by mouth as needed.

HPI ANKLE (07:34 JTF)

CHIEF COMPLAINT: Patient presents for the evaluation of **left, ankle pain, ankle tenderness.**
HISTORIAN: History obtained from patient.
MECHANISM: Complaint occurred by **No trauma by history, gouty flare.**
OCCURRED: Onset was **2 days, Complaint is worse, Complaint is constant.**
LOCATION: Pain in **lateral malleolus, medial malleolus,** Radiation is **proximally.**
QUALITY: **Patient describes pain as sharp, Patient describes pain as aching, Patient describes pain as throbbing.**
ASSOCIATED WITH SYMPTOMS: Patient denies knee pain, **Patient states ankle pain is present,** Patient denies foot pain.
SEVERITY: Maximum severity is **moderate,** Currently **symptoms are moderate.**
EXACERBATED BY: Patient's condition exacerbated by **walking.**
RELIEVED BY: Patient's condition relieved by **nothing.**

ROS (07:37 JTF)

CONSTITUTIONAL: No fever, No chills.
MUSCULOSKELETAL: **Historian reports arthralgias,** No back pain, No fall, No injury.
SKIN: No cellulitis.
NOTES: All relevant systems reviewed.

PHYSICAL EXAM (07:37 JTF)

CONSTITUTIONAL: Patient is afebrile, Vital signs reviewed, Patient has normal pulse, Patient has normal blood pressure, Patient has normal respiratory rate, Well appearing, Patient appears comfortable, Alert and oriented X 3.
HEAD: Atraumatic, Normocephalic.
EYES: Eyes are normal to inspection, Pupils equal, round and reactive to light, No discharge from eyes, Extraocular muscles intact, Sclera are normal, Conjunctiva are normal.
NECK: Normal ROM.
RESPIRATORY CHEST: No respiratory distress.
BACK: There is no CVA Tenderness, There is no tenderness to palpation, Normal inspection.
UPPER EXTREMITY: Inspection normal, No cyanosis, No clubbing, No edema, Normal range of motion.
LOWER EXTREMITY: No cyanosis, No edema, Normal range of motion, Ankle evaluation shows, LEFT ankle to have, no deformity, no ecchymosis, no hematoma, no erythema, no warmth, full range of motion, tendon function normal, distal pulses intact, distal motor intact, distal sensory intact, **Swelling noted, laterally, medially, Tenderness to palpation, laterally.**
NEURO: GCS is 15, Speech normal, Gait normal, Memory normal.
SKIN: Skin is warm, Skin is dry, Skin is normal color.
PSYCHIATRIC: Oriented X 3, Normal affect, Normal insight, Normal concentration.

DIAGNOSIS (07:16 JTF)

FINAL: PRIMARY: **Arthritis – gouty .**

DOB: [redacted] **Date of Service: 10/21/2010**

North Hills Medical Center
800 Pelham Road
Greenville, SC 29615
(864) 234-5800

PatientID: [redacted]
Patient Name: JAMES L DAWKINS
DOB: [redacted] **Date of Service: 10/21/2010**

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 10/21/10

HISTORY: James Dawkins is a 60-year-old year gentleman who presents today for followup requests physical. See the detailed history and physical sheet for family history, review of systems, personal history, past medical history, and systematic examination.

PROBLEMS:

1. Hypertension. His blood pressure seems to be well controlled on Tenoretic and benazapril. I have discussed risk factor management for coronary artery disease. I have arranged his baseline EKG. He may benefit from cardiac stress test. He is started on pravastatin. I have recommended aspirin for chemoprophylaxis. I have encouraged him on diet and exercise.
2. History of gout. No acute exacerbation at present; however, had two ER visits in the last two months. He is advised to continue allopurinol, indomethacin, and colchicine p.r.n.
3. Renal impairment. His serum creatinine was 2.2 in 2008 and it has improved to 1.9 last year. Continue optimize blood pressure. He will also benefit from statins, I started on this and avoid NSAIDs. Indomethacin sparingly for pain for couple of days for acute gout exacerbation and back pains and plus/minus Tylenol. I have explained the risk of NSAIDs.
4. Obesity. I have discussed diet, exercise, and weight reduction. BMI is 30. His weight is stable.
5. Rectum examination, stool heme negative. Prostate examination is normal. I have offered him a colonoscopy or barium enema. He will let me know if he wants to do this. I have also ordered a PSA for prostate screening. He will benefit from uroflowmetry bladder scan to make sure he does not have significant urinary problems related to renal impairment or bladder neck obstruction.

ADDENDUM: The patient's EKG shows sinus bradycardia with rate of 56 and incomplete right bundle-branch block. No significant ischemic changes.

Sushil Mittal, M.D.

Medical Report

PATIENT: James Dawkins
A/C#: [redacted]
SSN:
DOB: [redacted]
DATE: 03/23/11

HISTORY: James Dawkins is a 60-year-old gentleman who presents today for followup for numerous medical problems, renal impairment, hypertension, and obesity. He has gained significant weight since last visit. He also has history of gout, degenerative arthritis, and history of back surgery. He denies any acute back exacerbation or acute gout exacerbation. I advised him to avoid NSAIDs due to renal impairment and indomethacin sparingly for pain. Continue allopurinol for gout. Continue Viagra p.r.n. for erectile dysfunction. I have discussed risk factor management for coronary artery disease including aspirin for chemoprophylaxis, optimize blood pressure, ACE inhibitors, beta-blockers, diet, and exercise. He is advised to cut down sugars, and carbohydrate. We will rule him out for diabetes due to weight gain and obesity. I have given him refill on his medications. He denies shortness of breath, chest pain, urinary symptoms, change in bowel habits, hematemesis, or melena. He will let me know if he wants to do colonoscopy; however, may carry some significant risk from contrast due to renal impairment.

PHYSICAL EXAMINATION: No acute distress. Vital signs: Stable. Blood pressure is controlled. O2 saturation is 96%. He has increased weight about 10 pounds since last visit. Chest: Clear. Heart: No murmur. Abdomen: Soft. Lower extremity examination: No edema. Peripheral pulses are palpable.

PLAN: I have arranged labs and lower extremity Doppler studies and carotid Doppler studies and we will re-evaluate after this. In the meantime, management as above.

Sushil Mittal, M.D.

History of Present Illness

Miscellaneous Transcription *(TOLLISON MD, RONALD M; 4/5/2011 12:26:19 PM)*
DATE: 04/02/11

PROBLEM: Gout.

HISTORY: The patient has history of gout and had a flare up in his right knee. He is out of his indomethacin. He states he does not like to take colchicine, did not feel like it helps. He does not have any fever or chills.

PHYSICAL EXAMINATION: He is afebrile. He does have some effusion in right knee, tenderness to palpation and crepitation with movement.

IMPRESSION: Gout.

PLAN: Indomethacin 25 mg three times a day, dispensed #30, refill x2. If not relieved by Monday then come back in.

History of Present Illness:

Pain: tingling,numbness, **not satisfactorily controlled. Pain score is 8/10 today.**

SPINE:

Mr. Dawkins returns today for re-evaluation. He notes that over the past several months he has developed some difficulty with buttons, primarily with the right hand greater than the left. He has also developed some gait instability and imbalance. Last week, he fell and twisted his left ankle as well and has pain and swelling in the left ankle area.

Objective:

Vitals: Ht 73, Wt lbs 230, BMI 30.34, HR 60.

Past Orders:

Examination:

SHCC SM Spine:

On physical examination, grip release is rapid in his bilateral hands. Negative finger escape bilaterally. Positive Hoffman bilaterally. Unable to do a tandem gait due to pain in his left ankle. He has weightbearing pain in his left ankle today. Positive scapulohumeral reflex bilaterally. Positive cross adductor reflex in his lower extremities bilaterally. Downgoing Babinski bilaterally. No ankle clonus bilaterally. He has 2+ biceps, brachioradialis, triceps reflexes bilaterally. No inverted radial reflex bilaterally. He has 3+ patellar tendon reflexes bilaterally, 2+ Achilles tendon reflex on the right. I could not elicit an Achilles tendon reflex on the left. Motor and sensory are intact at all levels of his bilateral upper and lower extremities. Tenderness over his ATFL on the left ankle and slightly over the deltoid ligament although much less. He also had tenderness over the fibula distally, nontender over the medial malleolus. Moderate swelling in the left ankle.

Assessment:

Assessment:

1. CERVICAL SPINAL STENOSIS - 723.0 (Primary)
2. Ankle Sprain - 845.01
3. Myelopathy - 336.9

1) Left ankle injury. We will obtain radiographs today due to weightbearing pain and tenderness over the fibula.

2) Beginning to exhibit changes consistent with myelopathy. I reviewed his previous MRI scan of the cervical spine dated 03/13/09 that shows stenosis primarily across C3-4, C4-5 and C5-6. On measurement today of the sagittal sequences, the central canal diameter at C3-4 is 6.8 mm, and at C5-6 and C6-7 is 5.1 mm. I also reviewed his previous MRI scan of the lumbar spine that shows degenerative changes most severe at L5-S1 along with postsurgical changes across that level.

Plan:

1. Ankle Sprain

Left ankle. We obtained AP and latearl and mortise views of the left ankle today. Medial clear space

346

looks good. There is no subluxation. I do not see fracture in the distal fibula or medial malleolus. We will place him in an air splint and have him continue weightbearing and activity as tolerated. This is likely a second- or third-degree ankle sprain and will gradually resolve, and I discused this with him.

2. Myelopathy
He appears to be progressing myelopathy, and we will obtain a repeat MRI scan of the cervical spine. He continues with good alignment overall and no significant changes. We will likely proceed with laminoplasty procedure. I discussed this with him. He is not having significant neck pain at this time, and I think he would be a good candidate for a multilevel laminoplasty procedure. We will follow up with him after MRI scan of the cervical spine and placed him in a soft cervical collar today as well. TM/bep.

Immunizations:

Diagnostic Imaging: Ankle, 3 views, left

Labs:
Procedure Codes: 73610 ANKLE (3 VIEWS) X-RAY

Preventive:

Follow Up: after MRI cervical spine

FAMILY HISTORY: **Family history is not contributory to this case.** (08:57 MKH)
NOTES: **Nursing records reviewed, Agree with nursing records, Old chart reviewed, Medication list reviewed.** (08:57 MKH)
Nursing records reviewed, Old chart reviewed, Medication list reviewed. (09:20 FMS)

CURRENT MEDICATIONS (09:02 MKH)
Allopurinol: 150 mg(s) by mouth every day.

HPI ARTHRITIS (09:18 FMS)
CHIEF COMPLAINT: Patient presents for the evaluation of **left knee, left toe,** joint pain, **joint swelling.**
HISTORIAN: History obtained from patient.
TIME COURSE: **Onset of symptoms reported as sudden,** Onset was **2 days prior to arrival, Patient currently has symptoms, Complaint is persistent, Complaint is constant.**
QUALITY: Pain is described as **aching, no different from patient's previous episodes, throbbing.**
ASSOCIATED WITH: No headache, trauma, fever, rash or chills.
SEVERITY: Maximum severity is **severe,** Currently **symptoms are severe.**
NOTES: **pt reports gout attack in left 2nd toe and knee. Pt states wife thought he was febrile a few days ago. No temp taken. no vomiting. No change from previous attacks.**

ROS (09:20 FMS)
CONSTITUTIONAL: No fever.
CARDIOVASCULAR: No chest pain.
MUSCULOSKELETAL: **Historian reports arthralgias, Historian reports joint swelling,** No injury.
SKIN: No cellulitis.
NEUROLOGIC: No headache, No focal weakness, No speech changes.

PHYSICAL EXAM (09:21 FMS)

CONSTITUTIONAL: Patient is afebrile, Vital signs reviewed, **Hypertensive, Patient appears uncomfortable.**

HEAD: Atraumatic, Normocephalic.

EYES: Eyes are normal to inspection, Pupils equal, round and reactive to light, Extraocular muscles intact.

NECK: Normal ROM.

UPPER EXTREMITY: Inspection normal, Normal range of motion.

LOWER EXTREMITY: Inspection normal, Knee evaluation shows, LEFT knee to have, no deformity, no ecchymosis, no swelling, no lacerations, no hematoma, no erythema, no warmth, no tenderness to palpation, full range of motion, negative anterior drawer test, negative Lachman test, negative drawer test, negative McMurray's test, negative Apley's test, distal pulse intact, capillary refill less than 2 seconds, distal motor intact, distal sensory intact, **Tenderness to palpation, of medial knee, Active range of motion, causes pain,** Foot evaluation shows, LEFT foot to have, full range of motion, tendon function normal, capillary refill less than 2 seconds, distal motor intact, distal sensory intact, **Swelling noted, dorsally, 2,** toe, **Tenderness to palpation, of dorsal foot, 2,** toe, **mild warmth, no erythema.**

SKIN: Skin is warm, Skin is dry.

DIAGNOSIS (09:18 FMS)

FINAL: PRIMARY: **acute gouty arthritis.**

recheck BP, if still >210/110 give med by Stauter, MD, Faith M. for Stauter, MD, Faith M. on Wed Jun 22, 2011 09:03 Status: Done by Bayne, RN, Ashley Wed Jun 22, 2011 09:10

MEDICATION SERVICE

Clonidine Hydrochloride: Order: Clonidine Hydrochloride – **Dose:** 0.1 mg : by mouth
Ordered by: Faith M. Stauter, MD
Entered by: Faith M. Stauter, MD Wed Jun 22, 2011 09:03 ,
Acknowledged by: Ashley Bayne, RNWed Jun 22, 2011 09:09
Documented as given by: Ashley Bayne, RN Wed Jun 22, 2011 09:13
Patient, Medication, Dose, Route and Time verified prior to administration.
, Amount given: 0.1 mg, Site: Medication administered P.O., Correct patient, time, route, dose and medication confirmed prior to administration, Patient advised of actions and side–effects prior to administration, Allergies confirmed and medications reviewed prior to administration, Patient tolerated procedure well, Patient in position of comfort, Side rails up, Cart in lowest position, Family at bedside, Call light in reach.

Clonidine Hydrochloride: Response assessment performed, No signs or symptoms of allergic reaction noted, **Decreased blood pressure,** BP: 193, / 100. (10:05 APD)

Dilaudid: Order: Dilaudid (Hydromorphone Hydrochloride) – **Dose:** 2 mg(s) : intramuscular
Ordered by: Faith M. Stauter, MD
Entered by: Faith M. Stauter, MD Wed Jun 22, 2011 09:14 ,
Acknowledged by: Lynn Reott, RNWed Jun 22, 2011 09:24
Documented as given by: Lynn Reott, RN Wed Jun 22, 2011 09:32
Patient, Medication, Dose, Route and Time verified prior to administration.
, IM medication, Amount given: 2 mg, Medication administered to right buttock, Correct patient, time, route, dose and medication confirmed prior to administration, Patient advised of actions and side–effects prior to administration, Allergies confirmed and medications reviewed prior to administration, Patient in position of comfort, Cart in lowest position, Family at bedside, Call light in reach.

: Follow Up : Response assessment performed, No signs or symptoms of allergic reaction noted, **Decreased pain, Decreased symptoms,** Advised not to ambulate without

assistance, Patient in position of comfort, Side rails up, Cart in lowest position, Family at bedside, Call light in reach. (10:00 APD)

Solu-Medrol: Order: Solu-Medrol (Methylprednisolone Sodium Succinate) – **Dose:** 125 mg : intramuscular
Ordered by: Faith M. Stauter, MD
Entered by: Faith M. Stauter, MD Wed Jun 22, 2011 09:15 ,
Acknowledged by: Lynn Reott, RNWed Jun 22, 2011 09:24
Documented as given by: Lynn Reott, RN Wed Jun 22, 2011 09:31
Patient, Medication, Dose, Route and Time verified prior to administration.
, IM medication, Amount given: 125 mg, Medication administered to left buttock, Correct patient, time, route, dose and medication confirmed prior to administration, Patient advised of actions and side-effects prior to administration, Allergies confirmed and medications reviewed prior to administration, Patient in position of comfort, Cart in lowest position, Family at bedside, Call light in reach.

: Follow Up : Response assessment performed, No signs or symptoms of allergic reaction noted, **Decreased symptoms**, Site inspection shows, No swelling at administration site, No drainage at administration site, No bleeding at site, No bruising noted at site, Advised not to ambulate without assistance, Patient in position of comfort, Side rails up, Cart in lowest position, Family at bedside, Call light in reach. (10:00 APD)

MEDICATION ADMINISTRATION SUMMARY

Drug Name	Dose Ordered	Route	Status	Time
Dilaudid	2 mg(s)	intramuscular	Given	09:32 6/22/2011
Solu-Medrol	125 mg	intramuscular	Given	09:31 6/22/2011
Clonidine Hydrochloride	0.1 mg	by mouth	Given	09:13 6/22/2011

Detailed record available in Medication Service section.

PRESCRIPTION (09:17 FMS)

PrednisONE: Tablet : 20 Mg : Oral : Quantity: *** 2 *** Unit: tab Route: Oral Schedule: every day Dispense: *** qs ***
POTENTIAL MODERATE INTERACTION: Clonidine Hydrochloride.

NOTES: x 5 days
Prescriber DEA: FK0756455
Prescriber NPI: 1871762328
Prescriber Medical License Number: 31593.

Roxicodone: Tablet : 5 Mg : Oral : Quantity: *** 1 *** Unit: tab Route: Oral Schedule: every six hours Dispense: *** 20 ***
POTENTIAL MODERATE INTERACTION: Clonidine Hydrochloride.

NOTES: as needed for pain
Prescriber DEA: FK0756455
Prescriber NPI: 1871762328
Prescriber Medical License Number: 31593.

Colchicine: Tablet : 0.6 Mg : Oral : Quantity: *** 1 *** Unit: tab Route: Oral Schedule: every hour Dispense: *** 3 ***.

NOTES: take for pain every hour until diarrhea develops or pain resolved.
Prescriber DEA: FK0756455
Prescriber NPI: 1871762328
Prescriber Medical License Number: 31593.

NURSING ASSESSMENT: EXTREMITY LOWER (09:00 APD)

NURSING DIAGNOSIS: **aic r/t left leg/foot pain.**

CONSTITUTIONAL: Patient arrives ambulatory with steady gait to treatment area, History obtained from patient, Patient appears comfortable, Patient is cooperative, Patient is alert and oriented x 3, Patient appears in no acute distress, Patient's skin is warm and dry, Patient's mucous

membranes are moist and pink, Patient is well-groomed.
LEFT LOWER EXTREMITY: Pedal pulses present, Brisk capillary refill, Sensation intact, Patient denies numbness/tingling, Normal pulses, No obvious signs of trauma, No external rotation, No shortening, Homan's sign negative, Area of assessment is **entire foot, lower leg,** Pain described as **burning, Pain is intermittent, On a scale 0-10 patient rates pain as 8,** Pain non-radiating, Duration of pain: **couple of days, Redness, Swelling,** to **left foot, Partial range of motion.**
RIGHT LOWER EXTREMITY: No complaint of pain, Pedal pulses present, Brisk capillary refill, Sensation intact, Patient denies numbness/tingling, Full range of motion, Normal pulses, No obvious signs of trauma, No external rotation, No shortening, Homan's sign negative.
SAFETY: Side rails up, Cart in lowest position, Family at bedside, Call light within reach.

NURSING PROCEDURE: NURSE NOTES (09:16 LER)
TIME: **Report from Ashley Bayne RN, care assumed.**

NURSING PROCEDURE: DISCHARGE NOTE (10:03 APD)
TIME: Patient discharged at 1000, Patient discharged to, home, Patient, ambulates without assistance, Transported via friend/family driving, Accompanied by parent, Discharge instructions given to, patient, mother, Simple/moderate discharge teaching performed, Teaching performed by ashley bayne,rn, Name of prescription(s) given: prednisone, colchincine, roxicodone, Prescription given and additional instructions on side effects of same given, Medication reconciliation form given to patient, Above Person(s) verbalized understanding of discharge instructions and follow-up care, Patient treated and evaluated by physician, Patient discharged by physician, Dr. Name: stauter.
VITAL SIGNS: BP: 193, / 100, Pulse: 76, Resp: 18, Temp: 97.1, Pain: 0/10, O2 sat: 95, on: ra, Time: 1000.

INSTRUCTION (09:18 FMS)
DISCHARGE: ACUTE GOUTY ARTHRITIS.
FOLLOWUP: Medical Center North Hills (Greer), Internal Medicine, 319 S. Buncombe Rd., Greer SC 29650, 864-877-3883, Follow up with Primary Care Physician In one to two days.
SPECIAL: Advance activity as tolerated
Encourage fluids
Follow up with primary care physician
Return if worse, or if new problems develop such as fever, worsening redness or swelling of joints, severe pain
Take medication as prescribed.

DISPOSITION
PATIENT: Disposition Type: Discharge, Disposition: Discharge home, Condition: Stable. (09:18 FMS)
Remove from ER. (10:06 APD)

MEDICATION RECONCILIATION (09:18 FMS)
Allopurinol – Continue as previously prescribed: 150 mg(s) by mouth every day.
ADDITIONAL NOTES: Reviewed with patient.

#91

Patient: DAWKINS, JAMES LEWIS
DOB: [redacted] **Age:** 60 Y **Sex:** Male
Phone: [redacted]
Address: [redacted] TAYLORS, SC-29687

Provider: Timothy McHenry, MD
Date: 07/05/2011

Subjective:

CC:

1. Gait instability with imbalance and weakness in the hands as well as neck and back pain. Patient returns with cervical MRI completed on 06/29/11.

HPI:

History of Present Illness:

Pain: stabbing, throbbing, cramping, numbing, tingling, Pain score is a 8/10, pain is **not satisfactorily controlled.** Prior Treatment: Aleve.

SPINE:

Mr. Dawkins returns today for followup after MRI scan of the cervical spine. He continues to have right-greater-than-left arm paresthesias and dysfunction, particularly with dexterity tasks. He continues to have gait imbalance and also has left leg paresthesias. He has intermittent neck pain, but this is variable and most of the time fairly minimal. A couple of times a week he does have significant neck pain of 8/10 to 9/10 on the VAS scale.

ROS:

CONSTITUTIONAL:

Fever no. Weight Loss no. Weight Gain no. Fatigue no. Chills no. Night Sweats no.

CARDIOVASCULAR:

Chest Pain no. Irregular Heart Beat no. Poor Circulation no. Leg/feet swelling no. Leg/foot ulcer no.

GENITOURINARY:

Blood in urine no. Pain in urinating no. Unable to urinate no. Bladder Infection no. Frequent Urination no. Difficulty with urination no.

NEUROLOGICAL:

Paralysis no. Frequent Headaches no. Seizures no. CVA/ITA no. Syncope no. Anxiety/Depression no. Tremors no. Speech Problems no. Feeling of hopelessness no. Sleep disturbance no. Vision Changes no.

-EYES:

Decreased Vision no. Cataracts no.

RESPIRATORY:

COPD no. Asthma no. Persistant Cough no. Shortness of Breath no. Wheezing no. Pneumonia no.

ENT:

Recent loss of hearing no. Sinusitis no. Headache no.

GASTROINTESTINAL:

GERD no. PUD/Gastritis no. Liver Problems no. Stomach Pain no. Diarrhea no. Abdominal Pain no. Nausea/Vomiting no. Black tar-like or bloody stool no.

SKIN:

no Rash or itching, no. Dryness of Skin no. Ulcer no. Cancer no. Open sores no. New Moles no. Poor wound healing no. Skin Infection no.

PSYCHIATRIC:

Depression no. Bipolar Disease no.

ENDOCRINE:
Diabetes no. Thyroid disease no. Heat intolerance no. Cold intolerance no.
HEME/LYMP:
Anemia no. Bleeding Problems no. Blood Transfusion no. Bruises no.
ALLERGIC/IMMUNOLOGIC:
Seasonal no. Iodine no. Food Allergies no.
MUSCULOSKELETAL:
Joint Swelling or Stiffness no. Muscle aches no. Joint Pain no. Pain in multiple joints no. Weakness yes.

Medical History: Hypertension, Kidney Cancer.

Surgical History: Partial Right Kidney Removal. Dr. Hill and Dr. Cobb August 2008.

Hospitalization/Major Diagnostic Procedure: See surgical history .

Family History: Family: Hypertension

Social History: no Alcohol . no Smoking . no Recreational drug use.

Medications: Aleve tablet sodium 220 mg prn pain, Medication List reviewed and reconciled with the patient

Allergies: NKDA.

Objective:

Vitals: Ht 73, Wt lbs 230, BMI 30.34, HR 60.

Past Orders:

Examination:
Imaging Studies:
MRI cervical w/wo on 06/29/11 at Greer- PACS.
SHCC SM Spine:
On physical examination, grip release is slightly diminished in his bilateral hands. Positive Hoffman bilaterally. Unable to do a tandem gait. Motor and sensory intact at all levels of his upper and lower extremities today, but he also notes that he has tingling to light touch in the digits of his right hand.

Assessment:

Assessment:
1. CERVICAL SPINAL STENOSIS - 723.0 (Primary)
2. Myelopathy - 336.9
I reviewed the MRI scan of his cervical spine which shows neutral alignment with severe stenosis across the subaxial segments C3-4, 4-5, 5-6 and 6-7. Severe foraminal stenosis bilaterally at C4-5 and C5-6. Right greater than left foraminal stenosis at C6-7.

Plan:

1. CERVICAL SPINAL STENOSIS
I discussed with him laminoplasty procedure with ARCH fixation including interposition allograft and plate and screw fixation. We will obtain AP and lateral radiographs of his cervical spine today for further assessment of alignment, and the possibility of laminoplasty would be an option for him. TM/bep.

2. Others
ADDENDUM: Cervical spine AP and lateral radiographs show neutral alignment. I discussed with Mr. Dawkins and his wife risks of surgery including loss of alignment and kyphosis and need for further

356

surgery. I think this risk is relatively minimal with laminoplasty in his situation. I will plan on the laminaplasty opening to be on the right side due to his right arm radicular symptoms and likely perform foraminotomies at C4-5, C5-6 bilaterally and C6-7 on the right. We will have him preoperatively evaluated by his internist and see him back one week prior to scheduled surgery.

Immunizations:

Diagnostic Imaging: Cervical Spine, 2-3 views

Labs:

Procedure Codes: 72040 C-SPINE (2 VIEWS) X-RAY

Preventive:

Follow Up: 1 Week before surgery

VIDEOGRAPHER:

On the record at 9:21. The court reporter can swear in the witness.

COURT REPORTER:

Would you raise your right hand? Do you swear or affirm that the testimony you are about to give will be the truth, the whole truth, and nothing but the truth?

WITNESS:

I do.

Timothy P. McHenry, M.D., having been first duly sworn, was examined and deposed as follows:

EXAMINATION BY MOORHEAD:

Q. Dr. McHenry, you are a physician by profession; is that correct?

A. That's correct.

Q. And do you have any kind of specialty?

A. Orthopedic surgery.

Q. And are you Board certified?

A. I am.

Q. Where did you do your undergraduate studies?

A. MIT.

Q. And where did -- where did you do your medical studies?

A. New York University.

Q. And subsequent to that, I assume you did a residency?
A. I did.
Q. Where did you do your --
A. University of Texas Southwestern in Dallas.
Q. And are you licensed in the state of South Carolina?
A. I am.
Q. And have you practiced here for some time?
A. About six and a half years.
Q. And prior to that, where did you practice?
A. I was in the United States Army, so I practiced in a variety of places. But in the Army for about ten years.
Q. All right. Are you licensed in any other states other than --
A. Texas.
Q. Texas. All right. Have you had an occasion to treat Mr. James Dawkins?
A. Yes, sir.
Q. All right. And do you recall how he came to be your patient?
A. I do not.
Q. All right. And the record reflects here that you saw him sometime in the spring -- March of 2009.
A. It looks like, by our records, the first time I saw

him was March 11, 2009. Yes, sir.

Q. And when was the last time you saw him?

A. Looks like -- pretty recently, I know. But it was -- looks like February of this year.

Q. All right. And you have been his orthopedic surgeon for his back and neck problems during that period of time?

A. Yes, sir.

Q. All right, sir. And Doctor, what -- did you do an examination of Mr. Dawkins when he first came to see you?

A. Yes, sir.

Q. And did you repeat those on each visit?

A. Yes, although it may have been a different examination. I mean, it depends on what, you know, we're looking at that particular visit.

Q. I understand. What history of trauma, if any, did you receive from Mr. Dawkins with regard to his neck and back problems?

A. Well, I was told that he was in a motor vehicle collision in September.

Q. Of 2008?

A. 2008, right, because it wouldn't make any -- actually, it says there 2009, but that's actually after the clinic visit. So, I saw him in 2008.

Q. All right, sir. And did Mr. Dawkins explain the symptoms that he was having to you?
A. Yes, sir. He says at that time he had back pain and left radicular leg pain.
Q. All right, sir. And was your examination consistent with what he told you about his symptoms?
A. Yes, sir.
Q. And did you also treat him for his neck?
A. Yes, sir.
Q. And what did your examination reveal about his neck?
A. Well, so he also had symptoms of neck pain and radicular arm pain on the right side, which was all in that accident as well. And the examination was consistent with possible radiculopathy or nerve compression in his neck.
Q. All right, sir. And were his statements about his symptoms consistent with your examination?
A. Yes, sir.
Q. And did you do any radiographic studies either of the neck, or the low back, or both?
A. Yes. We did -- it says here we did neck x-rays. And I reviewed low back x-rays, although I don't know that I ordered those. Those might have been ordered previously, but available to me. It's not really clear here.

Q. All right, sir. And the treatment that you have rendered Mr. Dawkins from the time that you first saw him until the time you last saw him in February of this year, were those treatmetns and recommendations necessary and reasonable from a medical standpoint?

A. I think so.

Q. All right, sir. And have you made any recommendations about -- well, let me -- let me back up. Doctor, what role did the motor vehicle accident of September 24th, 2008 have with regard to Mr. Dawkins' neck and back maladies?

A. Well, in my opinion, it appears to have exacerbated symptoms. You know, he has degenerative changes in both areas, but he didn't have these symptoms, to my knowledge, before the motor vehicle accident. So, the motor vehicle accident aggravated the symptoms.

Q. So, the motor vehicle accident was -- was it the immediate precipitating cause of his problems for which he saw you?

A. Yes, sir.

Q. All right, sir. Did -- have you made any recommendations with regard to any procedures with regard to Mr. Dawkins' neck or -- and/or low back?

A. We had discussed and actually had at one time

scheduled him for surgery on his neck, and he had -- you know, I think right now, you know, his -- you know, he's considering or possibly going to have surgery on his neck. And then depending on that, he may have surgery on his low back as well.

Q. Is it more likely than not that he will have both surgeries?

A. Yes.

Q. And with regard to the neck surgery which you have -- you've recommended neck surgery, correct?

A. Correct.

Q. And with regard to the neck surgery, would you tell us the nature of that? I mean, basically what you would do and what it's called.

A. Well, he has multiple levels of compression of his neurologic elements in his neck. And at one point we had discussed doing anterior discectomies through the front of his neck replacing -- removing three disc levels, decompressing his spinal cord, and replacing them with a bone graft and plate. He deferred that surgery because he was having some kidney problems and had some assessments pending with an oncologist. Since then, we decided that it would possibly be a better approach to do a surgery posteriorly in his neck. But the procedure is the

same thing, decompressing his neurologic elements.

Q. All right, sir. And I don't want to put words in your mouth, but basically what you're talking about is taking out the discs at three levels --

A. Well, that was the first surgery. But no, this is -- this is opening up space. It's called a laminoplasty, which is opening up the lamina, which is the bone in the back of the neck.

Q. Would you remove any discs during that surgery?

A. No.

Q. And would a hospital stay be required to perform that neck surgery?

A. Yes, sir.

Q. And for what length of time?

A. Well, it's a little variable, but generally two to three days.

Q. Okay. And would there be any follow-up care with regard to office visits to you?

A. Yes. Generally, you know, assuming there's no complications or unexpected problems, about three weeks after surgery, six weeks after surgery, three months after surgery, six months, and then a year after surgery.

Q. All right, sir. Would there be any physical therapy involved?

A. Possibly. I mean, you know, initially, no. But it depends on, once he's healed from surgery, how he's doing and if he needs -- if he has functional problems that would benefit from therapy, we would send him to therapy at that point.

Q. Is it more likely than not that he would require physical therapy?

A. I think so, but it's -- you know, but it's -- but not everybody does.

Q. And how many times would you see Mr. Dawkins post-operatively for his neck?

A. Let's see. Three, six, twelve -- probably five times, you know, approximately.

Q. And what do you usually recommend with regard to the number of times physical therapy would be part of his treatment?

A. Well, it depends on, you know, what -- how he's doing, you know. Initially, patients will get physical therapy while they're in the hospital to make sure that they're able to get up and around safely and aren't a fall risk and able to do the things they need to do. And so, that's probably every day for those two or three days after surgery that they're in the hospital. Once they're on the other end, once they've recovered, they may need

therapy between six and ten times.

Q. Okay. All right, sir. Would you -- during the six -- five or six visits that you would see -- is it five or six visits post-operatively that you would see him?

A. Let me count again. Three, six, twelve -- about five.

Q. All right. On each of those occasions, would an x-ray be taken?

A. Yes, sir.

Q. All right. Is that standard procedure?

A. It is for this because you want -- we want to check and make sure that he's maintaining the alignment that he started out with because one of the risks of the surgery is to -- is to fall into malalignment. And then if that happens, he might require another surgery because he's lost alignment in his spine. So, we monitor that to make sure that he's doing okay in that regard.

Q. All right, sir. And the -- what about medications? Would you prescribe medications post-operatively?

A. Generally pain medications while he recovers from the pain of having a surgery. But other than that, no.

Q. And what -- what do you prescribe or would you

prescribe for Mr. Dawkins?

A. Well, generally, at least for the first period of time, I prescribe Oxycodone, and then from there wean down to Lortab various strengths until hopefully, within two to three months after surgery, the patient's not on pain medication anymore.

Q. Can you tell me the number of Oxycodone tablets or the number of Lortab tablets that you would recommend?

A. Well, generally about forty of the Oxycodone. And then when we wean to the Lortab, it's between forty to sixty. And then as various strengths of Lortab as we go forward, it's about the same. And then hopefully we have him off the pain medication in about two or three months.

Q. All right, sir. Going forward in the future, would Mr. Dawkins from time to time need evaluation from a physical therapy standpoint after the initial round as he gets older or --

A. You know, probably not, but it's -- but it's difficult to say. It just depends on how he does.

Q. Okay. That is something within the realm of possibility?

A. Yes.

Q. All right, sir. Let's turn to the low back surgery.

Now, Mr. Dawkins had had low back surgery previously; is that correct?

A. That's correct.

Q. All right. And what -- I think you've already answered this, but what role did the accident of September 24, 2008 play with regard to your treatment and recommendations for Mr. Dawkins' low back?

A. Well, the -- the history I had was that he was doing fairly well before that and that he developed recurrence or these symptoms that he had - the back pain and the leg pain -following the accident.

Q. Okay. So, it's causally related?

A. Yes.

Q. Did you have an opportunity -- or have you had an opportunity to review any of the EMS records, or the ER records, or the family doctor records leading up to your treatment?

A. No.

Q. All right, sir. The treatment that you rendered with regard to Mr. Dawkins' low back, were they -- was it necessary and reasonable given his symptoms?

A. Yes.

Q. All right. What future treatment have you recommended for Mr. Dawkins' low back which are

related to the automobile collision of September of 2008?

A. Well, if he continues to have the symptoms he had and they haven't gotten any better, then decompressing his discs, the lowest segment, L5-S1, and performing a fusion surgery.

Q. All right. And is it more likely than not that he'll have to have that done based on your examination and treatment of him for --

A. Well, based on my last visit I had, yes, it's more likely than not.

Q. All right. And tell us what kind of surgery would be done on the low back.

A. It would be decompressing the nerves so that they don't have any compression, and then putting rods and screws and fusion.

Q. Okay. And how do you decompress the nerves?

A. We remove bone and disc material that's pushing on the nerves.

Q. All right. And is -- would that surgery be necessary and reasonable for Mr. Dawkins given his presentation to you?

A. Yes.

Q. All right. How long would his hospital stay be?

A. From that surgery, usually between three to five

days.

Q. Okay. And I'm going to ask you the same questions with regard to physical therapy. Is it more likely than not that Mr. Dawkins would have physical therapy post-surgically?

A. Yes.

Q. And he would have that in the hospital?

A. Well, he'd have it initially in the hospital. Same reason, to make sure that he's able to mobilize, get up safely, and isn't a fall risk. And then -- and then subsequently, he would -- he would have physical therapy to increase his flexibility, and his core conditioning, and his back.

Q. Can you tell us with reasonable certainty how many P.T. visits -- physical therapy visits he would require?

A. Well, again, it's probably between six and ten. It could be as many as twenty. Some of it depends on the therapist's assessment of what kind of deficits he has, what kind of disability he has, and then what needs to be done to try and help him with it.

Q. All right, sir. Would -- getting to the x-rays, would you perform -- have x-rays taken of Mr. Dawkins' back post-surgically?

A. Yes.

Q. And how many times -- would you do that with each visit?
A. Yes.
Q. And how many visits would you see him?
A. About five.
Q. Okay. And what about pain medications?
A. Same regimen.
Q. Same number? Same regime?
A. Approximately.
Q. Okay. All right, sir. And the future medical with regard to the neck and the back, in your opinion, Doctor, are they causally related to the automobile collision on September 24, 2008?
A. Yes.
Q. Can you say that with a reasonable degree of medical certainty?
A. Yes.
Q. What is -- in your opinion, are the problems which Mr. Dawkins has with regard to his neck and back permanent in nature?
A. Yes.
Q. All right. What about going forward in the future with regard to pain either in the neck or the back? Is that something that -- that you would expect him to have from time to time?

A. From time to time, although the degree and how limiting it is would be variable.

MR. MOORHEAD:

Okay. All right, sir. I believe those are -- let me check my records. I believe those are all the questions I have at this time.

EXAMINATION BY MR. McGARR:

Q. Dr. McHenry, my name is Mark McGarr and I represent Mr. Watts, who's the person that Mr. Dawkins brought suit against. I'll be asking you some questions and actually giving you documents that you probably have never seen before. So, don't be -- don't be shook up by that.

A. Sure.

Q. It's just the nature of the beast. Let me give you this packet, and we'll go in that order. Does it appear that Mr. Dawkins went to see -- and this is using the first document in that packet, and I would probably take the clip off. Does it appear that Mr. Dawkins went to see Dr. Jeray on or about November 12th, 2008?

MR. MOORHEAD:

May I interrupt you just a minute?

WITNESS:

A. Dr. Geary?

EXAMINATION RESUMED BY MR. McGARR:

Q. Geary. I'm sorry.

MR. MOORHEAD:

Okay.

EXAMINATION RESUMED BY MR. McGARR:

Q. Geary. I'm sorry.

A. Yes, it is.

Q. And at that point, does it appear that he gave Dr. Geary a history of his present illness and he said that it was left shoulder, lower back, and left leg pain, and then the ''when'' was the 9/24, and the ''how'' was a motor vehicle accident?

A. Yes.

Q. And later on does it say his, ''Shoulder symptoms began after an MVA on 9/24/08, as did his low back symptoms, and now he has pain with overhead things. Some stiffness into his lower back''?

A. Yes.

Q. And so, that appears to be the history that he gave to Dr. Geary; is that correct?

A. That's correct.

Q. I'm going to the next document in that set of documents. This would be apparently an intake sheet for your office. Did he come to see you initially on 3/11 of 2009?

A. Yes.
Q. And according to this intake sheet, on 3/11 of 2009, you guys had asked, ''What is the main reason for your office visit today?'' And he had put down back pain and leg pain; is that correct?
A. Correct.
Q. And said -- then it says, ''How did this begin? Circle.'' And did he put an X by ''motor vehicle accident''?
A. Correct.
Q. And does it -- later on it says, ''Where is your problem -- your pain or problem?'' And he said back and legs?
A. Correct.
Q. So, the history that he gave to Dr. Geary and the history that he's giving when he's filling out this patient sheet with regard to his back, both indicate that his back problems began as a result of his automobile accident; is that correct?
A. Yes.
Q. Looking at your document where he apparently came to see you guys on 3/11 of 2009 and you're actually getting involved, did he give you a history that the patient was, ''A fifty-eight year old gentleman who was in a motor vehicle collision on September of '09

--'' I understand that that's not correct. It's supposed to be September of '08. ''He had onset of back pain and left posterolateral radicular leg pain at the time''? Is that basically the history he gave you?

A. Well, yeah. Actually, I think there's more history. I mean, that's only the first sentence of the -- of a whole paragraph.

Q. Yes, sir. But what I'm -- with regard to when his problems began is what I'm looking for right now.

A. Okay. Right.

Q. Is that essentially what he gave you?

A. Sometime in 2008, yeah.

Q. Let me show you the next document in this round of documents. This is from Eastside Cardiology, and it's referencing James Dawkins dated February 1 of 2000. Do you have that document?

A. Yes.

Q. Does it appear that he's telling him that his past medical history consisted of having back surgery in 1985?

A. Yes.

Q. If we could go to the next --

MR. MOORHEAD:

I don't want to -- excuse me for interrupting you,

but can you show me where you are?

MR. McGARR:

You're too far -- you're too far ahead.

MR. MOORHEAD:

Okay. Okay, thank you. Pardon the interruption.

EXAMINATION RESUMED BY MR. McGARR:

Q. So, your understanding was that he was doing pretty well with regard to his back before this automobile accident, and the history he gave you was that his back problems began as a result of the automobile accident in 2008; is that correct?

A. Well, no. You know, we knew he had back problems before that. He had surgery, and that wasn't -- that's not -- I mean, that's a known thing. Right? So, we knew that he had had surgery before.

Q. But he's telling you that his back problems had begun as a result of our automobile accident; is that correct?

A. Well, he said his back problems were worsened as a result of the accident. I don't think he ever said that they -- that he didn't have back problems before the accident.

Q. Would you agree that your document of -- when he fills it out on 3/11 of '09 where it says, ''what is your main reason for your office visit today?'' and

he said back pain and leg pain?

A. Right.

Q. ''How did this begin?'' He said motor vehicle accident; is that correct?

A. That's correct.

Q. ''How long has this been a problem?'' And he said for six months?

A. Correct.

Q. So, he's telling you in that intake sheet that it was from a motor vehicle accident that took place approximately six months prior to coming to see you?

A. That's correct.

Q. And would you agree that this 2/1/2000 document indicates that he actually had had back surgery in 1985?

A. I would agree to that.

Q. And would you agree that he's actually told you that he was doing pretty well prior to the automobile accident insofar as his back was concerned, but then that back -- that the automobile accident did his back in?

A. That's -- yeah, I agree with that.

Q. Taking you to the next document in that stack of documents, this is a Spartanburg Regional document dated 5/5 of '97.

A. Okay.
Q. Does it appear that he was having steroid injections provided to his low back as far back as 5/5 of '97 at Spartanburg Regional?
A. Yes.
Q. Going to the next document in that set of documents, this will also be a Spartanburg Regional document. Does it appear that, on 5/5 of '97, he had been referred by Dr. McCorkle for a pain consultation and consideration for a lumbar epidural steroid injection at L5-S1?
A. Yes.
Q. And that's the low back area; is that correct?
A. That's correct.
Q. And that he's describing that the gentleman had been involved in an automobile accident a few weeks earlier which had caused him to have increased and chronic pain in his left hip?
A. Yes.
Q. And that he was having pain that was radiating into both legs and into his feet?
A. Yes.
Q. And that he was having left leg numbness?
A. Yes.
Q. And that --

A. Well, you know, that says for ten years, though.
Q. I understand.
A. That's not a new thing.
Q. And that no meds have helped him permanently?
A. Correct.
Q. So, does it appear that, by '97, he has at least a ten year history of chronic low back trouble that was radiating into both legs?
A. Well, we don't know that. We know that he has -- that he has an episode here that he's getting treatment in 1997. We don't know how long -- if that had been constant or if it had just been a very temporary thing that had been present very briefly and then he had this treatment and then it went away. We don't really know. I mean, we know that he was treated in May of 1997, but, you know, that's all we know, you know, for these symptoms. But as far as how long -- other than the left leg numbness for ten years, you know, it's unclear whether this is just a recent episodic thing or whether it's been present longstanding.
Q. But we at least see left leg numbness times ten years?
A. We do see that.
Q. And that's typically something that would be related

to discs in the low back that are causing left leg numbness?

A. Could be.

Q. I'm going to the next document in this set of documents, and this is date -- this is from the Specialty Group in Greer. Does it appear that Mr. Dawkins went to the Specialty Group in Greer on 1/17 of 2000 and he gave them as his past medical history that it was, ''Remarkable for back pain. He is on disability. History of back operation and lower quadrant pain''?

A. Yes.

Q. So, does it appear that he has been having back problems to the point that he was totally and permanently disabled by the year 2000?

A. Well, it says he has a past medical history and he has back pain. Again, it doesn't say how often he has back pain, if it's present all the time. It says he's had back surgery and it says he's on disability. I guess it would sort of --

Q. Sort of flow that he's on disability --

A. Well, it seems to be -- it seems to indicate he's on disability for his back pain, but it doesn't really state that directly. It just -- you know, it says he's on disability. So, you understand what I'm

saying? I mean, it's not really enough information to really know how often this is, if it's -- you know, to what degree, if it's episodic or not episodic, and, you know, all the time. You know, it could be all the time, chronic. It could be chronic episodic. It could be that he was -- he had, you know, back pain in the past, had a surgery, was put on disability, and now he's doing fine. I mean, you don't really know which of those three it could be.

Q. But the bottom line is, at this point in January 17 of 2000, he is saying that his past medical history is, ''Remarkable for back pain. He's on disability. Has a history of back operation --''

A. I agree.

Q. ''-- with lower quadrant pain''?

A. Well, and another thing -- so, lower quadrant pain doesn't have anything to do with the back.

Q. I agree.

A. So, it kind of rolls it all into this. So, it's really a -- not a very exact past medical history.

Q. Let's go to the next document, which is from Blue Ridge Urology. It will be dated 6/30 of '03. And in the review of his present illness at that point, would you agree that the doctor noted that he had some chronic low back pain?

A. Yes.
Q. Going to the next document, which is from Blue Ridge Urology where he went to see them on November 14th of 2003, does it state that he has some, ''Long time back problems. His back problems are even worse during cold weather''?
A. Yes.
Q. Collectively when you start putting these documents together, does it appear that he has been having chronic back problems since at least 1997?
A. Right, but we don't -- I mean, I agree with that. But again, we don't know how -- what the nature of the symptoms are, if he had relatively, you know, mild symptoms that he was very functional with and, you know -- or if they were very debilitating symptoms. It's really unclear because it doesn't really specify what his functional level was or how significant -- you know, how severe his symptoms were. We just know that he does have a history of back problems.
Q. And at this point we've got a history of chronic back problems, by this last note?
A. Right.
Q. Going to the next document, which is from the Smith Center, does it appear that Mr. Dawkins was there on

November 17th of 2003 and one of his active diagnoses was low back pain?

A. Yes.

Q. And does it appear that, on that date, ''The patient was complaining of pain in his lower back and his groin area. States this happens ever since he hurt his back about twenty years ago. Patient also stated, after hurting his back, the pain started in his lower back, down into his legs, and in the groin area. He has also stated that, when the weather changes, his problems with his back -- when the weather changes, he has problems with his back''?

A. Yes.

Q. Would that tend to indicate that he's had chronic back problems for about twenty years?

A. Yes, it would.

Q. And that would mean that he's had chronic back problems since roughly 1983? Twenty years from 2003?

A. Correct, I guess. You know, and twenty years is probably a fairly -- you know, a fairly broad approximation, but certainly -- certainly sometime around that time.

Q. And it appears that he's having radiating problems which would indicate that he's having some nerve

pinching and that's causing some of his chronic low back problems, at least by 2003?

A. Well, we don't know that. I mean, you know, it could be that his leg pain is related to nerve impingement, it could be the left leg pain -- there's other reasons to have leg pain as well with back conditions or without back conditions. So, it's not always neurologic impingement.

Q. Going to the next document, does it appear that he was at the Smith Center on or about 1/8 of 2004 and again they were noting that his active diagnosis, or one of his active diagnoses, was low back pain?

A. Yes.

Q. Going to the next document, this is also from the Smith Center dated 3/31/2004. Does it appear he went to see them on that date and actually told them, ''The patient felt his blood pressure is up because his back has been hurting a lot with the changes in weather''?

A. Yes.

Q. So, again, is this indicative of someone who has had chronic longstanding low back pain?

A. Yes.

Q. Going to the next document -- and Doctor, you have -- I guarantee you haven't seen any of these

documents, have you?
A. No.
Q. And you have no reason to?
A. (Negative response).
Q. Going to the next document, does it appear that he was back at the Smith Center on 5/6 of '04 and his active diagnosis was still low back pain?
A. One of his active diagnoses, correct.
Q. Going to the next document from the Smith Center dated 6/17 of '04, does it appear that his active diagnosis is still low back pain?
A. I agree, but I -- but I also think that this is probably rolled over from one visit to the next. I don't think this is probably that they've gone in and entered this every time because it's all in the same order and it says -- you know, the active diagnoses, I think, just haven't been changed. So, you know what I'm saying? I mean, it says hemorrhoids, gouty arthritis, hypertension, and low back pain in the same order, same thing. So, yes, it appears that way. But again, whether this was established new -- you know, on each visit or whether it just rolled over from the previous visit, I suspect the later.
Q. Okay. It might be helpful if we go to the next

document, which is from the Smith Center dated 9/15/04.

A. Okay.

Q. Does it appear that he was seeing them on that date -- and I'll quote, ''Patient is here today complaining of lower back pain. Patient is requesting pain medications for his low back pain. He states the Lortab does nothing for him''?

A. Yes.

Q. Would that be indicative of the fact that he was having an active diagnosis of low back pain?

A. Yes.

Q. And does it appear that his low back pain is chronic in nature and has been there for years and years at this point?

A. Well, I think that you've established that. I think, though, the question, again, is how -- you know, how significant is it, you know, and what's the nature of it. Is it constant? Is it episodic?

Q. Apparently pretty significant if the pain -- if Lortab is doing nothing for him.

A. At that point.

Q. Right. Going to the next document from the Smith Center dated 10/4 of 2004, again are they listing him as one of his active diagnoses being low back

pain?
A. Yeah. Excuse me, yes.
Q. The next document would be from the Smith Center dated 11/15 of '04. Do they again list one of his active diagnoses as being low back pain?
A. They do.
Q. Going to the next document from the Smith Center dated 12/14 of '04, do they again list as one of his active diagnoses low back pain?
A. They do. But again, I mean, this is clearly just rolled over from the previous -- I mean, it's always the same, in the same order as hemorrhoids, gouty arthritis, hypertension, and low back pain. So, they're saying that, and certainly they could have updated it every time. But on the other hand, it's really not clear to me, you know --
Q. Well --
A. -- how much this is updated or how much this is just rolled over from the previous visit.
Q. Would you agree that his medications are Flexaril, Lortab, and Indocin?
A. Yes.
Q. And that would be things that you would use for low back problems?
A. Well, among other things, yes. I mean, you know,

they're fairly generalized pain medications. So, it could be used for low back pain. I would assume in this case, or you could assume that that was the reason.

Q. And then going to the next document dated 1/14 of '04, does it appear on the second page of that document that they're again stating that he had an active diagnosis of low back pain?

A. We're on '04 now, or '05?

Q. '05. My apologies.

A. Okay.

Q. 1/14/05.

A. That is correct.

Q. And going to the next document, this was with Blue Ridge Urology. Does it appear on 1/18 of '05 that he's having hip and leg pain?

A. Yes.

Q. And radiating pain that you were seeing, you were relating to being related to his low back; is that correct?

A. At that point he says he has left hip and leg pain.

Q. But when you were treating him, that radiating pain, you were relating that to a problem with his low back; is that correct?

A. I was when I saw him, but I'm not seeing him -- I

didn't see him here.
Q. I understand.
A. Right.
Q. But at least he's saying, ''I've got hip and leg pain,'' on 1/18 of '05; is that correct?
A. Correct.
Q. Going to the next document, which is from the Smith Center dated 2/28/05, does it appear that he was at their office and one of his active diagnoses was low back pain?
A. Yes.
Q. And he's taking medication that you could use -- I take that back. Not on that date. They didn't give him any medications. Going to the next document where he's at the Smith Center on 4/25/05, on page two, are they again listing him as having low back pain as an active diagnosis?
A. Yes.
Q. And they're prescribing medications that you could actually use to treat low back pain?
A. Yes.
Q. In fact, they prescribed him with a Medrol dose pack, which would be to try to get inflammation down in the low back?
A. Well, he has -- they say he has gouty arthritis, and

so -- so, they're prescribing the Medrol for that, it looks like. If you look at the recommendations made for patient, it says, ''Gouty arthritis has been bothering him. He has had to take Medrol for relief. I suggest he see a rheumatologist and consider using Allopurinol.'' So, that -- it appears that that's -- at least that visit is more about gouty arthritis.

Q. And yet they're also giving him the Lortab and the muscle relaxers; is that correct?

A. Right. And again, Lortab, you know, is a pain medication that could be for the pain from gouty arthritis as much as it could be from the low back.

Q. Going to the next document from the Smith Center dated 6/2/05, does it appear that his active diagnosis is low back pain yet again?

A. One of them.

Q. Going to the next document from the Smith Center dated 11/2/05, does it appear that one of his active diagnoses is again low back pain?

A. Yes.

Q. Going to the next document from the Smith Center dated 1/31 of '06, page two, again does it appear that they're listing his active diagnosis -- or one of his active diagnoses as being low back pain?

A. Yes.
Q. Going to the next document with the Smith Center dated 4/21 of '06, does it appear that he was there and, on that date, he stated that, ''He had back surgery in '85 and was recently cutting some wood with a chainsaw about five days ago and he started developing low back, hip, and leg pain yesterday. His left leg seems to be bothering him more than the right, and he is -- and he is only bothered in his right leg occasionally. He also has a problem with sciatica on his left side mostly in the past''?
A. Yes, that's what the history says.
Q. So, would that indicate and somewhat confirm that, when they're saying he's got an active diagnosis of low back pain all these times, that they're treating him for problems that have been sciatic in nature or radiating into his legs in nature in the past and that he's obviously complaining of those radiating problems and low back problems as of this date?
A. I agree with that.
Q. Going to the next document from the Smith Center dated 6/20 of '06, does he go to see them and is one of the things he mentions is that -- he mentions that he had been having problems with his back, but since he's been walking, it may have gotten better?

A. Yes.
Q. And yet would you agree that his diagnosis at that point on page two is still left sciatica and low back pain?
A. Yes.
Q. Going to the next document from the --
A. But again, I mean, you know, I think they're clearly lumping diagnoses in there and carrying over from one time to the next because if he -- you know, if he says that he's -- you know, they've really -- you know, if you look at the majority of them, the four things that remain consistently there on every one of these Smith Center Cardiovascular Wellness medical records is you've got hemorrhoids, gouty arthropathy, hypertension, and low back pain, in that order. So, I don't think they're updating this every time. I think they're rolling it over from one visit to the next, and it may be because they continue to be active problems. It may also be because this is an electronic medical record that rolls it over from one time to the next. And if you don't actively go in and change it, that's what it's going to say. And that's certainly how our medical record works. And so, it's -- and looking at this, I suspect that, you know, this is not a record

that's generated de novo every time he's seen. Most of this is rolled over from the previous time.

Q. Let's go --

A. So, I think that questions the accuracy of some of these, some of the records.

Q. Let's go back to the 4/21/06 visit to the Smith Center. We're going back. At that point, would you agree that their diagnosis was actually left sciatica, insomnia, hemorrhoids, gouty arthropathy, hypertension, and low back pain?

A. Right.

Q. So, they weren't those standard four at that point, were they?

A. Well, it's still the standard four, the last four in the same order. They just added two new ones up top. You see? So, it's -- and again, it's the same order every time, the same wording. So, it's -- it's questionable how -- you know, if this is generated -- I don't think this is generated de novo every time.

Q. If we could go forward a little bit to 9/21/06. Does it appear that he was back at the Smith Center and, at that point, he was complaining of low back pain that comes and goes? This is 9/21/06.

A. Yes.

Q. So, you would agree that he was telling him his back pain was coming and going?
A. Correct.
Q. Going to North Hills, does it appear that he went to see them on 6/28 of '07?
A. Yes.
Q. And at that point, ''The patient was complaining of recurrent back pain localized in the lower back and radiating around his buttocks, thighs, into his testicles. Patient says that he has had back problems before and was evaluated by a neurosurgeon. The back pain is not constant, but occurs one to two times every several weeks''?
A. That's correct.
Q. So, that would clearly indicate that we're dealing with someone who's got chronic low back issues that are radiating in nature?
A. That are episodic, right. So, they're not constant, at least at this point.
Q. If he's having them one to two times every several weeks --
A. As opposed to all the time every day, you know.
Q. Oh, okay.
A. I mean, that's the difference between constant and episodic.

Q. And does it appear that an MRI was done of this gentleman dated July 12th, 2007, and it was done of his low back?

A. Is that the next page?

Q. Yes, sir.

A. Yes.

Q. And does it appear that that MRI is revealing the same problems that you saw when you did an MRI of him?

A. That appears to be the same problems.

Q. Right. So, the MRI pre-automobile accident and the MRI post-automobile accident are showing the exact same problems in the exact same areas; would you agree?

A. That's correct, but that's not -- but that's an expected finding, right. Unless he's had a fracture in his back or some sort of, you know, structural traumatic change, you're probably going to see pretty similar findings.

Q. But my point is, you're wanting to do surgery to correct some areas of his low back; are you not?

A. Correct.

Q. And those areas that you're wanting to correct were already damaged back in 2007?

A. Those areas already had the changes they had, but

whether those changes were symptomatic at that time is not the case. So, it's a difference between saying whether they were damaged or not, you know, or whether they're symptomatic or not. They can look -- you know, changes in your low back can be -- can look how they look and they could be non-symptomatic in some patients, they could be very symptomatic in other patients, or they can progress from being non-symptomatic to very symptomatic and look very similar. So, it's not -- you can't really establish a causative relationship based on the appearance of the studies unless there's been a fracture. What you can do is say, you know, ''What were your symptoms before? What are your symptoms now?'' And it's more of a symptomatic causal relationship as opposed to -- you know, unless -- again, unless there's been a fracture or some sort of, you know, major structural change. You can't look at something and say that, you know, ''It looks the same, so therefore it was the same symptomatically,'' because you can't measure symptoms on an MRI scan.

Q. Not wanting you to do that. What I'm wanting you to tell me is, would you agree that his July 12, 2007 MRI of his low back is showing that he has problems

at multiple areas of his low back and that those problems were in existence as early as July 12, 2007?

A. Okay. Well, I would say he has changes in multiple levels of his low back, and to the extent that they're problems or not problems depends on his symptoms. So, I think it depends on how you want to say it.

Q. Okay.

A. Like for instance, if I was to MRI your low back -- I don't know if you have low back pain or not. But there's a pretty good chance that you're going to have some changes in your low back. Pretty good chance that everybody in this room will have changes in the low back. Hopefully not symptomatic, I mean, you know. And so, it depends. It just -- you know, there's radiographic findings, and then there's radiographic findings that correlate with symptomotology.

Q. Okay. Let me use your terminology. Would you agree that the changes that exist in this gentleman's low back that are seen on MRI on July 12, 2007 are essentially identical to the changes that you saw when you did an MRI of him after the automobile accident?

A. I would say they're certainly similar. I mean, you know, I'm looking at this study and comparing it to the other study. I would -- I would think they're probably indistinguishable, the changes between the one that I saw and then this one. But that being said, I'm not looking at one study and the other study side by side, so I can't say for sure.

Q. But what we have is severe degenerative changes showing up in July of 2012 just like what you saw when you did your MRI after the automobile accident?

A. Well, severe is your word. I mean, I don't -- I don't know that it's severe. I mean, it's certainly -- you know, he has, what they say, mild to moderate degenerative disease that's worse at the L5-S1 level. He has post-surgical changes at that level with some scar formation from the surgery before, and he has an enlarged left S1 nerve root. But again, I mean, you know, severe or not severe is really a judgment call.

Q. But the bottom line is MRI pre and post show essentially the same changes? There's nothing significantly different between those two?

A. I think that's correct. Although, you know, I don't have the studies, both studies.

Q. And then with regard to his symptoms, we're noting

symptoms on 6/28 of '07 that are essentially the symptoms he was complaining of with you, that he's having low back pain that's radiating into his legs?

A. Right, except that it occurs one or two times every several weeks in 2007.

Q. Does it appear that he returns, going to the next document, to North Hills on 8/20 of '07?

A. Yes.

Q. Where he tells them he's continuing to have groin pain which radiates from the lumbar area or the low back area?

A. Yes.

Q. Going to the next document, does it appear he goes back to North Hills on 9/13 of '07 where he was telling them he continues to have -- ''Continues to complain of groin pain, pain mostly localized on the left side and shoots to the back. Patient -- pain occurs daily and he cannot identify any specific identifying factors. Pain ongoing for several months, no improvement.'' Would you agree that this appears very similar, if not identical, to the complaints he was having when he came to see you with regard to his low back and the radiation problems?

A. Well, the thing that's not clear to me - and I'd

have to go look in my records again, I guess - is that -- because certainly from the records back in June 28th, 2007, it was episodic at that point and occurring one or two times every several weeks. My impression was that, when I saw him, it was constant. But I don't know if I -- if that's just what I'm remembering or if that's clearly in the record. I don't know, you know.

Q. I'll get you some records that'll help clarify that in a moment. But at this -- but you would agree --

A. But that would be a difference. I mean, you know, if he had occasional, you know, pain once every -- one or two times every several weeks, and then, you know, depending on how long it lasted and how severe it was or not, you know, it may not be much of an issue other than, you know, maybe a nuisance as opposed to if you had it all the time every day and it was, you know, significant for you. You know, that would -- that would be a different -- even though the symptom location may be the same, you know, the severity, the debility, you know, is going to be different in those two situations. And I'm just not sure, you know, how that -- you know, how those complaints when he went to those other practices compare to, you know, what his complaints

were with me in that regard.

Q. We'll get there. But the bottom line is, on 9/13 of '07, he was at North Hills stating that he, ''Continues to complain of groin pain. Pain mainly localized on the left side and shoots to the back. Pain occurs daily and he cannot identify any specific identifying factors. Pain ongoing for several months, no improvement.''

A. Correct.

Q. That's essentially what he was telling you after the accident; is that correct?

A. That's correct.

Q. Going to the next document, which is a patient history form filled out on 9/26/07 by Mr. Dawkins, does it appear that when they're asking him what types of trouble he's having that he says -- for example, ''Does anything help or make the problem worse?'' And he says, ''Sitting for a long time''?

A. Yes.

Q. And does it say, ''Does the problem interfere with your normal functions?'' And did he say, ''Yes. Intimacy, going to any functions that require extensive sitting''?

A. Yes.

Q. And again, we're dealing with that low back problem

that he's been complaining of pretty significantly for the last few months, maybe even years; is that correct?

A. Correct.

Q. Does it appear that on -- that he went to North Hills on 1/14 of 2008 and his current problem list consisted of lumbosacral neuritis, or a problem with that low back that was radiating?

MR. MOORHEAD:

Are you on 1/14/2008?

WITNESS:

A. Yes.

MR. McGARR:

1/14/2008.

WITNESS:

A. And that's how I would interpret that. But again, that's a fairly non-specific, you know, designation. I mean, thoracic or lumbosacral neuritis, you know --

EXAMINATION RESUMED BY MR. McGARR:

Q. But it just fit with the gentleman who's having trouble sitting and who's having trouble for months with low back pain that's radiating into his legs; would it not?

A. It could. That's right.

Q. Going to the next document in that list of documents, does it appear that he's back at North Hills and he still has a current problem list on 1/28 of 2008 of the lumbar neuritis?
A. Right. But again, it's the exact same current problem list as he had two weeks before. So, you know, it's --
Q. Could be that it's so chronic that it's a current problem, just like these other problems are current?
A. Or it could be that they're just not -- they're just not updating it because he still has a rash, too. I don't know if he -- you know, if he had a rash for the whole two weeks or if they successfully treated it by then, you know.
Q. Does it appear that, on 3/10 of 2008, his current problem list still consisted of problems with his low back?
A. As well as the rash, yes. I mean, so yeah. I mean, it's the same list over and over again.
Q. And then does it appear on the last document that he's taking Celebrex as late as 8/26 of '08?
A. Yes.
Q. And do you realize our accident took place on 9/24 of '08?
A. Sure. The Celebrex, again, is a fairly generalized

medication. I mean, it could be from his gouty arthropathy, you know, it could be that -- you know, he had a biopsy for renal cell cancer sometime around that and it could be because of discomfort. And it's hard to know. I mean, so certainly Celebrex could be for low back --.

Q. Thank you. It could be for low back because that's heavily prescribed for that.

A. It's also a very generalized medication.

Q. Now let's look at the frequency that this gentleman was having with regard to his low back issues. The first document I want to show you is going to be a document from EMS with regard to Mr. Dawkins. This would be EMS that he used the day of the accident, September 24th, 2008.

A. Okay.

Q. When they're doing a history of his present illness, do they list it as, ''Patient has a chief complaint of pain to his left shoulder. Patient was a restrained driver in MVA. Damage to the front quarter panel of vehicle. No airbag deployment noted. Patient also complained of pain to his left arm''?

A. Yes.

Q. Does it appear that, while with EMS, his only

complaints were left shoulder and left arm pain?
A. Yes.
Q. No mention whatsoever of low back issues?
A. Yes, but that was also when he -- right at the point with EMS, right?
Q. Yes, sir.
A. Okay.
Q. Then does it appear that he was sent to Greenville ProAxis Therapy because of a complaint of shoulder problems as well as low back problems?
A. Yes.
Q. And that he was there on November 19th of 2008?
A. Yes.
Q. If you could go to page three of that document. Does it appear that, when they were palpating or checking his low back, they found him to be ''hyper-reactive with pain and wincing to light palpation over the erector spinae of the L4-5 region and the L-PSIS area''?
A. Correct.
Q. So, he's hyper-reactive when they're checking him out; is that correct?
A. Well, that's a subjective -- sure, that's a subjective assessment on their part.
Q. But nonetheless, they're describing his reactions as

hyper-reactive; are they not?

A. Yeah.

Q. Going to page five of that document when they're checking out his presentation, do they again say, ''Hyper-reactive and symptoms not consistent with neural pain secondary to non-dermatonal pattern of pain at the left lower extremity and mild Waddell symptoms were non-organic back pain''?

A. Yeah, that's what they say.

Q. Do they go on to say that, not only was he hyper-active, but that the, ''Patient's symptoms are not consistent with any form of appropriate referral pattern and are scattered from the left extremity to the upper extremity --'' I mean, ''the lower extremity to the upper extremity''?

A. Right. That's a physical therapist's assessment.

Q. And the physical therapist is saying, ''I can't make any hide nor hair of this guy's symptoms because they're scattered everywhere and they don't fit with even the way the nerves are situated in a person's body''?

MR. MOORHEAD:

I object to the form of the question, and I also object on the basis of hearsay. But please answer it, Doctor.

WITNESS:

A. Sure. Well, I mean, that's what they seem to be saying.

EXAMINATION RESUMED BY MR. MCGARR:

Q. Well, what they're saying is that --

A. You know, this a physical therapist. I mean, you know --

Q. I understand.

A. Let's set the context, you know, appropriately. There's no such thing as a mild -- you know, a mild Waddell symptoms. I mean, you know, Waddell has -- they're signs, I mean, and they're delineated in a way of trying to measure somebody for, you know, certain things we're looking for for a non-organic pathology or a reason to have symptoms. So, I'm not, you know -- so, I don't know what a mild Waddell symptom means. I mean, I don't know that they know what it means. I mean, you know, I think that they're -- I think that this is -- this is such a broad generalization of, you know, their opinion that they're having trouble, like you're saying, of nailing down exactly what's going on. But there's a lot of terminology in here that's just -- it's just difficult to interpret, you know, for me. And so, I think it'd be better to ask the physical therapist

what they meant --

Q. But the bottom line is --

A. -- instead of asking me what they meant. I don't know what they meant.

Q. I'm not asking you to tell -- you're the one that's wanting to tell -- you're trying to tell us what they mean. I'm saying what they said. What they said was, ''Hyper-reactive and symptoms are not consistent with neural pain secondary to a non-dermatonal pattern of pain,'' meaning that the pain is not flowing where the nerves, if they're being pinched, should be flowing?

MR. MOORHEAD:

I object on the same basis that I did before.

WITNESS:

A. And that's what they think. Okay? But again, I mean, you know, this is a physical therapist. This isn't an orthopedic surgeon or a neurosurgeon. I don't know what they mean by this. I don't know -- I don't know who the therapist was. I don't know, you know, what their knowledge level is or what their -- you know, so again, I mean, you know, this is, you know, asking me to interpret a physical therapy note. You know, it would be -- that's -- I don't -- I don't put a lot of validity into this.

Okay?

EXAMINATION RESUMED BY MR. McGARR:

Q. Okay. So, you don't believe that the -- when the physical therapist says, ''The patient's symptoms are not consistent with any form of appropriate referral pattern and are scattered from the lower extremity to the upper extremity,'' you don't believe they know what they're talking about?

A. No, I think they may or may not know what they're talking about. And certainly if I was seeing the patient following this and had this note, I would certainty assess them myself to see whether I thought that was the case or not. But I certainly not -- you know, rely on a physical therapist to tell me what -- you know, whether they have an appropriate referral pattern or an inappropriate referral pattern. Frankly, I wouldn't rely on another physician to do that, either. I mean, you know, so it's not anything specifically against therapy. I mean, it's just, you know -- we're all obligated to determine this for ourselves and to verify it for ourselves or to not verify it. And that a physical therapist wrote this -- again, I mean, you know, it's non-specific. I would -- I would use it as a basis to probably assess myself

and see what I thought, but certainly this doesn't mean that much to me.

Q. The average patient who's truly in pain will follow its doctor's advice; will it not?

A. Hopefully.

Q. Does it appear that Mr. Dawkins canceled his physical therapy appointment on 9/21 of '08?

A. Yes.

Q. Does it appear, going to the next document, that he then canceled yet again on December 3rd of 2008?

A. Yes.

Q. Does it appear that, on December 10 of 2008, that he wasn't even engaging in his home exercise program?

A. Yes.

Q. Does it appear that, when they check him out again on page two, that they continue to find him hyper-reactive with pain and wincing to light palpitation?

A. Yes.

Q. Does it appear, going to the next document, that he cancels his appointment with physical therapy yet again on December 16th of 2008?

A. You know what? I would actually, you know, again question that ''hyper-reactive with pain and wincing with light palpation over the erector spinae of the L4-5 region and left PSIS'' because it's exactly the

same wording as on the previous note from November 19th. November 19th, 2008. I mean, it's just odd to me that it's exactly the same wording. You know, it seems to me that that's been pulled forward on the electronic medical record and not necessarily a de novo assessment.

Q. Does it appear that he canceled yet again physical therapy on December 16th of 2008?

A. Yes.

Q. And does it appear that he was discharged from physical therapy for non-compliance on January 20th of 2009?

A. I don't see that one. Do I see that one? I see September 24th. Well, you know -- so, on September -- oh, January 20th. Okay. Yes.

Q. Does it appear on January 20th they discharged him for non-compliance?

A. Well, for attendance problems. And so, when you look at some of the reasons why, I mean, he couldn't come to some of his therapy because he was working. I think that's -- you know, at least he has a functional level. And the last time he didn't make it because he had a death in the family. So, I think that, you know, there are various why he wasn't -- it wasn't just that he was not showing up

to not show up. I mean, you know, whether these are legitimate reasons or not, I can't say. But certainly it's not, you know, consistently that he just didn't show up. There's one of those, there's work conflict for another one, and death in the family for another one.

Q. But they discharged him for non-compliance?

A. They did.

Q. And apparently at this point he was working to the extent that he wasn't even going to physical therapy?

A. Correct.

Q. And that's being done even though he's on total and permanent disability?

MR. MOORHEAD:

I object to the form of the question based on hearsay. There's no factual basis for that. Please -- please answer it if you can.

WITNESS:

A. Okay, sure. Well, I mean, all I know is that it just says here that he had a work conflict, so he no-showed. I mean, so I don't know specifics of what the work conflict was.

EXAMINATION RESUMED BY MR. McGARR:

Q. But let me represent to you he's told us he's on

total and permanent disability. Going to the next document, this is North Hills. Does it appear that, by 3/23 of 2009, he had been cleared to go to back surgery?

A. Yes.

Q. And the next document would be 5/26 of '09 where he's back at North Hills and they're saying, ''We have still cleared you to go and have back surgery. If you choose to, you can''?

A. Correct.

Q. And he did not choose to do the back surgery, did he?

A. Right. Well, I'm not sure who -- you know, what the -- you know, if there was a -- if it was me or somebody else. I don't know that I'd seen him by that point. Had I? I could go back and look at the --

Q. You had.

A. I had? Okay.

Q. You saw him by 3/11 of '09?

A. Right, but I'm not -- looking at that, I don't know that -- on 3/11/09, I didn't discuss surgery with him, doesn't look like, for his low back. In fact, it says we would -- ''At this point, he would like to continue non-surgical care, and non-surgical care

at this point is very reasonable. We'll see him back on a PRN basis if he'd like to be re-evaluated surgically.'' And then -- so, I don't know if that was me that was sending him there for pre-operative assessment medically, or if it was somebody else, or what the -- what the impetus for that was. It's just not clear from this.

Q. But it's irrelevant as to who was asking him to get pre-clearance. He was getting pre-clearance on 3/23/09 for low back surgery, and then he was getting pre-clearance again on 5/26/09 for back and/or neck surgery?

A. Right.

Q. And he was cleared to have those surgeries; was he not?

A. Yes.

Q. And he chose not to have either of those surgeries; is that correct?

A. Correct.

Q. Then it looks as if he came back to see you on 9/9 of 2009; is that correct?

A. Yes.

Q. And at that point you told him that he may be benefiting from having surgery to his low back?

A. Correct.

Q. And would you agree that he didn't do surgery in the year 2009?
A. Yes.
Q. Nor did he do surgery in the year 2010?
A. Correct.
Q. Nor did he do surgery in 2012?
A. Correct.
Q. And there is no plan at this point for him to do surgery in 2013?
A. Well, we haven't, I mean, scheduled surgery. This is -- this is a -- you know, his problems at this point are persistent problems. And it's a -- it's a question of him either electing to have surgery in the hopes that it would improve him or living with the problems he has, and that's the situation in a lot of patients with degenerative problems in their spine. So, again, it's not that it's -- it requires -- in fact, the notes in there fairly -- you know, fairly well demonstrate that, that it's a matter of him either deciding to continue with what he has or undergo surgery in the hope that it would improve.
Q. And he has not chosen to do that even though he's been cleared at least twice to have it done?
A. Correct.
Q. And looking at the vast -- at the records as a whole

that I gave you with regard to his prior back problems, would you agree that he has, by definition, had chronic low back problems for which he complained of for year after year after year, and they were radiating back problems?

A. I would agree with that with the caveat that we don't -- again, we don't know that the -- if they were -- I mean, at least there's indication that they were episodic at some point. And we don't know that -- if that changed to become more constant symptoms and to what degree they were more constant than they were before because, you know, again, that one note said it was, you know, a couple of times every several weeks. We don't even know the couple of times every several weeks, how long they lasted. I mean, you know, and then as opposed to somebody comes in and says, ''I have constant pain now all the time.'' You know, so that's a -- I mean, that is potentially a difference. And I don't know, you know, how much that difference is there.

Q. Well, let me see if we can compare and contrast his post-accident back issues with his pre-accident back issues. Does it appear that, when he went to North Hills on 10/23 of '09, and at that point he was feeling much better?

A. Yes, but it doesn't really say much better from what. I mean, it says, ''He presents here for follow up with his numerous medical problems.'' So, apparently he has a lot of things going on, and it says he's feeling much better. That may mean much better from a variety of medical conditions, variety of symptoms. It could be that the back issues are one of those, or it could be that the back issue is not one. I mean, it's just not clear. I mean, so --

Q. All right. It may be a little clearer when we get to the next document. On 3/1 of 2010, does it appear he goes back to North Hills?

A. Yes.

Q. And at that point his history of present illness makes no mention of neck problems or low back problems, does it?

A. No, because he's mostly being seen for a knee problem at that point.

Q. And yet on page two, they did do an exam of his musculoskeletal system and they found that he had no tenderness in his spine, he had full range of motion, and he had normal rotation, meaning he could move from side to side, and no instability; is that correct?

A. That's their physical examination at that point.

Q. And their physical examination essentially of his spinal system is normal?

A. Right. But again, just like the physical therapist's note we talked about before, I mean, it doesn't mean much to me. I mean, it's --

Q. Doctor, this is a doctor.

MR. MOORHEAD:

Let him finish his answer, please.

WITNESS:

A. So, I think that -- you know, I think that -- sure, it's a doctor, but it's not an orthopedic surgeon or a neurosurgeon, and it's not me. So, I don't know to what degree they did these tests and how they determined it. So, I would take a look at it and say, you know -- if I thought that might be the case, I'd examine them. But as far as looking at somebody else's note and me saying, ''well, yeah, I'm sure he was normal at that point,'' I don't know whether he was or not. I know that they say that he was. You should ask them. But I'm not going to look at their note and say that they were.

EXAMINATION RESUMED BY MR. McGARR:

Q. I'm just asking you to see -- to agree with me that that's what they said is that his neck and back examines essentially on that date were normal.

A. Well, they're saying he didn't have any kyphosis, lordosis, which is actually sort of, you know -- it's an interesting way of terminology because everybody has kyphosis and lordosis in their spine. That's a normal finding. So, for them to say you don't have kyphosis or lordosis, I don't know what that means. I mean, that's a -- that's a non sequitur for an examination finding. So, that alone makes me look at that and say, you know, that doesn't really have any validity. I mean, you know, they're saying -- because everybody in this room has kyphosis in their thoracic spine, lordosis in their lumbar spine and -- because that's the way we're built. So, you know, that's just not an accurate description of anybody's normal back.

Q. Full range of motion, normal rotation, and no instability is what they noted; is it not?

A. Right. And I don't know how they would -- how they would determine instability on an examination, either, of a back. I mean, you know, that's something that we determine radiographically, normally. It's not like a shoulder or something where you can sort of, you know, move your shoulder joint in and out of location. That's just not the way it works in the spine. So, again, I mean, you

know, the statements that are here, I think, are questionable as to what exactly are meant by the person examining him, you know, or what they think they mean. And so, to me, it doesn't really mean much. I mean, I would want to examine him myself and determine whether I thought it was true or not. But the terminology I would use is, you know, ''no excessive kyphosis'' or ''no abnormal lordosis'', I mean, because everybody has kyphosis and lordosis. As far as instability, you know, maybe ''no symptoms of instability'' would be -- but you can't measure instability there usually on an examination of the spine. So, this is -- it is questionable how valid this physical examination is.

Q. So, you're not really keen on the physical therapist's evaluation, and now you're not keen on the North Hills doctor's evaluation; is that correct?

A. Well, sure, because it's not my evaluation. I mean, you know, I think you have to verify all the stuff yourself. I mean, I'm sure that these physicians are good physicians, and I'm sure that the physical therapist is a good physical therapist. But different people mean different things by their assessments, and it's not how I would term things.

But then again, you know, I'm an orthopedic spine surgeon. So, you know, my knowledge and examination of the area is a lot more specific and a lot -- you know, than someone who is a -- who is a medical doctor who has a scope of practice that's much broader than mine, but not as knowledgeable in the one area of the spine as mine. You know, I would defer to them about, you know, a heart exam, lung exam, all the rest of those things, certainly. I mean, they know more than me about that. But about the spine, not the case.

Q. Does it appear he returns to North Hills on 9/8/2010 and on that date he makes no mention of neck or low back problems?

A. Correct.

Q. Does it appear that he's at the Greenville Memorial Hospital emergency room on September 23rd of 2010?

A. Yes.

Q. And on the second page, they did a review of the system. And did he -- and did he state that he was having no back pain on that date?

A. Yeah, it does. And ''no neck pain'', was that crossed out by you, or was that crossed out -- what was that? Do you see what I mean?

Q. The ''no neck pain'' is still there. It's -- it's

just darkened. We'll talk about his neck in a moment. Right now I want to talk about his low back. Would you agree that, when they reviewed his systems while he was at the hospital on September 23rd, 2010, he told them that he had no back pain?

A. Correct.

Q. And when they did a neurologic exam of his body to see if he had any of that radiating pain, they came back with a negative neurologic review of his systems?

A. Correct.

Q. So, they're finding a gentleman who's saying, ''I have no back pain,'' and they're not finding any evidence of radiation -- of radiating pain going into his legs; is that correct?

A. That is correct.

Q. And then they get more specific on the next page when they're doing a neurologic exam. And would you agree that they find no focal motor deficits, no focal sensory deficits -- I'm sorry. At this point they're dealing in large part with his face. Would you agree that they're finding that his gait is normal?

A. Correct.

Q. Meaning he walks like a normal person?

A. Correct.
Q. And then on the fifth page of this document, does it appear that he arrived ambulatory with a steady gait?
A. Correct.
Q. So, they're finding that he's saying, ''I have no low back pain,'' and they're finding no neurologic symptoms indicating that anything's happening with regard to his low back on that date; is that correct?
A. Right, but they're seeing him for a gouty arthritis attack. Right?
Q. So, you don't think much of the hospital system's doctors, either?
A. No, that's not what I'm saying. I'm saying that his primary complaint was not his back or his leg. It was -- it was a -- it appears to be a gouty arthritis attack in his, maybe, elbow.
Q. And in fact, he's not complaining of low back pain at all. He's saying, ''My back's not giving me pain in the least,'' on that date; is that correct?
A. Let me see.
Q. The second page.
A. No, I understand what your point is with all the review of systems stuff. And you know, what I would

say is that his -- the reason he's being seen is for elbow problems. It's not for back problems.

Q. And he --

A. So, he may -- you know, it's -- you could infer that he's not having any back problems. You could also infer that, you know, he's saying, ''The back's not my problem. It's not the reason I'm here. I'm here for my elbow.'' And so, it's just not something that's being highlighted in the record or significant to his visit at this point. I mean, this is an emergency room record. This isn't a comprehensive, you know, physical examination for general medical status. This is somebody being treated for an elbow problem.

Q. But in his musculoskeletal system, he is saying no back pain; is that correct?

A. Well, they have written down here he's not having any back pain. And you know, to -- you know, how that was put to him or not put to him, I don't know. I mean, it's just -- you know, it looks here in review of systems that he's not having any back pain. Could be that they said, you know, ''Are any of these things bothering you at this time?'' ''No.'' You know, or it could be, you know, ''Is this anything --'' you know, ''Anything here that's

worsened?'' or -- you know, it's hard to know, you know. Again, this isn't my record, so I don't know what it means.

Q. Doctor, does it appear he goes back to the Greenville Memorial Hospital on October 16th of 2010 where his complaint was a pain in his ankle, and they then check his musculoskeletal system yet again and he tells them he has no back pain?

A. Correct.

Q. They then actually exam his low back and they find that he has no tenderness, and that there is no tenderness to palpitation, and that he has a normal inspection; is that correct?

A. That is correct.

Q. And they find his gait to be normal; is that correct?

A. That is correct.

Q. Going to the next document in this set of documents, does it appear that he is at the hospital on this date --

A. This is North Hills Medical Center?

Q. No, that should be GHS.

A. Which date?

Q. I take that back. It's the same date. Going -- continuing with the document dated October 16th,

2010 where he's at the hospital, on page four, did they check his left lower extremity and did the patient deny numbness or tingling and did he have full range of motion?

A. Correct.

Q. Now going to North Hills Medical, does it appear that he went to see them on 3/23/11 and denied any acute back exacerbations?

A. Correct.

Q. Does it appear, Doctor, that I've given you a number of visits to a number of different entities where he is either specifically not complaining of back pain or specifically saying, ''I'm not having back pain,'' from 2009 through 2011?

A. Yeah. You know, so yes, it appears that way. But the setting of the -- of most of these encounters is the emergency room, and the emergency room is very much you're going in to be seen for what's your specific complaint. In this case, elbow pain, or knee pain, or something like that. And to what degree these other areas are assessed, I don't know. Okay? You know, so you'll have to talk to the emergency room doctor, but, you know, it's -- you know, I don't put a lot of validity necessarily in that.

Q. I understand. Anybody who says he's not hurting, you just tend to disagree with?
A. No, I'm saying that the -- you know, you're asking me to interpret emergency room notes, and, you know, I'm not an emergency room physician. I don't know what -- you know, how that was generated. I don't know whether the physician generated that or whether the nurse generated that, you know, what they did to decide that. You know, that's not my area of practice.
Q. Were you aware that this gentleman had a pretty severe trip and fall on 6/21 of 2011?
A. No.
Q. Could that have exacerbated his problem and made that potential for him having surgery that much greater?
MR. MOORHEAD:
I object to the form of the question. There's no basis for that assumption. It may be helpful if you have that record to give it to the doctor and let him review it.
MR. McGARR:
We do, 6/21/2011.
WITNESS:
A. And it was my record, actually. And so, I guess I

was aware because he fell and twisted his left ankle.

EXAMINATION RESUMED BY MR. McGARR:

Q. And if you fall hard enough and you're twisting your left ankle, couldn't that exacerbate a problem with your low back?

A. You know, I suppose. I mean, on the other hand, if it's a ankle injury, it really shouldn't have anything to do with your back.

Q. If you fall after twisting your ankle, are you telling me and the jury that that can't affect your low back?

A. What I'm telling you is is that it probably would not affect your low back. If you injured your ankle, why would it affect your back? I mean --

Q. Because if you've fallen, Doctor, you've fallen.

A. -- it's an ankle injury. Right.

Q. So, is it your testimony that an automobile accident that was insignificant could have resulted in this guy's need for surgery?

MR. MOORHEAD:

Object to the form of the question and the characterization of ''insignificant''.

EXAMINATION RESUMED BY MR. McGARR:

Q. Let me rephrase that. That an automobile accident

where he's not -- where he's not hit, he hasn't hit the ground, could cause a need for surgery to his low back --

A. So, you're telling me that you want me to say that an automobile accident, right, with -- you know, how much does an automobile weigh?

Q. Doctor, let me finish the question, then you answer.

A. Okay.

Q. So, you're willing to say to a reasonable degree of medical certainty that an automobile accident caused this gentleman's need for surgery that has never taken place to date; is that correct?

A. If he had symptoms as a result of the automobile accident that could be attributed to findings in his low back and he didn't have the symptoms to the degree prior to the accident, then causally, it's related to that. And that would be the reason why he would need surgery or the reason why his symptoms were exacerbated to the degree he needed surgery. Now, as far as the question of whether you twisted your ankle and it could hurt your back, I suppose it's possible. I think it's unlikely. Most of the patients we see that twist their ankle or injure their ankle don't have back problems as a result of that. So, it's -- now, if you fell and hurt your

back, certainly you could do that. But if you fell and hurt your ankle, that's not hurting your back. So, that's, you know --

Q. So, it's your testimony that a fall can't exacerbate a low back problem that has been in existence since 1985?

A. Could a fall exacerbate a low back? Sure, it could. Okay? But if you're asking me that, when I saw him and he had left ankle pain as a result of a fall, did that also exacerbate his low back condition, if it says that he was having exacerbation of his low back condition, then he could have. But I don't think it says that. I'd have to look at the note all the way through. So, I -- looks to me like he fell and twisted his ankle and had an ankle injury.

Q. Doctor, going to the last document in this set of documents, does it appear that he was back at the Greenville Memorial emergency room on June 22nd, 2011 where he again makes no mention of low back issues?

A. Well, he was being seen for a left knee and foot problem for two days which he attributes to gout.

Q. But he's not talking at all about his low back anywhere in there, is he?

A. Well, you haven't highlighted anything that says

that he is. It's a fairly long record.

Q. And when they check that left lower extremity, they find that he has no tenderness to palpation, he has full range of motion, and then he has a number of normal exams done to test to see if he's having any radiating pain coming from the low back. And all those tests came back normal?

A. Which tests are those?

Q. They're page three.

A. Okay.

Q. Lower extremity.

A. Right. So, the ones you've highlighted?

Q. No, I highlighted the whole thing. But for example, Murray's?

A. Yeah. So, that's not a test to determine whether there's radiating pain from the low back. Those are -- those are tests to determine -- the Lachman test, the Draw test, the McMurray test, Apley's test, those are all tests to determine whether you have knee instability like a ligamentous injury or whether you have a cartilage tear in your knee. Those are all specific for those findings. It's nothing to do with the low back and radiating pain from the low back. I'm not really sure why those tests would apply to somebody that had knee pain and

a history of swelling with a history of gout. I mean, if you're assessing him for gouty arthropathy, I don't know why you're testing him with a ligamentous exam. I mean, that's generally somebody who's twisted their knee and sustained an injury to their knee. So, again, I mean, this is -- you know, the validity of that examination, to me, is questionable as an orthopedic surgeon. But it's not an orthopedic surgeon that generated this, it's an ER doctor. So, you're asking me to interpret, you know, something from somebody that's not an orthopedic specialist.

Q. Doctor, would you agree that this gentleman had longstanding problems with his low back prior to our automobile accident?

A. Yes.

Q. Would you agree that his MRI findings prior to our automobile accident are essentially identical to the MRI findings that came about after you did an MRI for him after the accident?

A. I think that's true. Although, again, I haven't, you know, seen both those MRI scans. But I certainly think -- I would agree in principle.

Q. I know you completely disagree and don't think much of these doctors that have examined him since you

saw him. But would you agree that there are a number of medical records where he's not complaining of low back pain, not complaining of leg pain, and not -- and actually having normal tests done? I know you don't like their tests. But insofar as their tests, they're coming back normal?

A. Well, I think it's -- I mean, I question whether this was not -- whether this was normal tests or whether this was not the primary complaint. The primary complaint was gout in a lot of these cases, and so that was what was focused on. And we have a long medical record that was generated in an electronic medical records system. I'm not sure what went into generating that record. So, I'm not saying that those tests were accurate or inaccurate. What I'm saying is I didn't perform them, so I don't know.

Q. But --

A. And I didn't see the patient at that time. I don't know.

Q. Let's assume they're accurate.

A. Okay.

Q. What these doctors are saying and these nurses are saying is that he's not complaining of low back pain on a number of occasions since you've seen him and,

when they're testing him, the tests with regard to low back pain are coming back normal?

A. Tests with regard to low back pain?

Q. Yes, where they're testing and he's not having any pain to palpation, he's got full range of motion, those types of things.

A. Okay. By the records, yes, I would agree with that.

Q. So, based on those records, if they're accurate and if these people are actually competent, he's not having consistent day-in/day-out low back problems that are radiating into his legs?

A. By those records, no.

Q. And that would mean that his post-accident condition is essentially identical to his pre-accident condition because sometimes he has low back problems and sometimes he doesn't, if these --

A. That, I don't know.

Q. If these doctors are accurate, I understand.

A. Well, I think that -- I think that, again, you're taking the patient in different context, being seen by different providers for different chief complaints. And so, you really can't say. I mean, you know, you have to -- you know, in order for you to make that determination, you'd like to see him seen by the same person who does the same

examination, asks the same questions, and see him, you know, for the same problems. What you have here is a plethora of medical records sometimes in the emergency room where he's being seen for some acute problem that's not his low back complaint at that point, or by medical doctors who are treating him for a variety of medical conditions that he also has. And so, you know, to try to, you know, then say, well, you know, that this clearly shows that, it doesn't clearly show it. It just shows that, you know, potentially that wasn't the focus of the visit. So, you know, it may not have been explored or commented on to the degree that it would have been commented on if he was being seen for those complaints.

VIDEOGRAPHER:

This marks the end of video number one. We're off the record at 10:50 a.m.

(OFF THE RECORD)

VIDEOGRAPHER:

This is video number two. We're on the record at 10:54 a.m.

EXAMINATION RESUMED BY MR. MCGARR:

Q. Doctor, this should go a bit more quickly because we're going to be covering some records we've

already talked about. Again, the first document in this set of documents is the EMS report from the date of the accident. Would you agree that that EMS report indicates that Mr. Dawkins was not complaining of neck pain while with EMS?

A. Yes.

Q. Then --

A. We've already looked at that record, haven't we?

Q. That's what I'm saying. We're moving --

A. So, we're going again? All right.

Q. Well, now we're doing neck. I'm sorry.

A. Okay, right. Is that going to take another hour? Because again, I have a patient -- a clinic full of patients. Okay? I want to get this on the record. This was supposed to be an hour deposition. I don't know how long it's gone. But these questions are circular, we're going over the same things over and over again. You're asking me to interpret other physicians, other -- you know, physical therapy notes, things like that that are not things that I have done, things that I had -- that have -- you know, that are part of my assessment. And so, you know, I find this very tedious and questionable to why I'm being asked to do this. You know, it's -- you know, you guys are lawyers, so I guess it's for

you to decide. But you know, it certainly isn't right for the twenty patients that I have out there that are waiting for me.

Q. Doctor, let's just make sure that we clarify a few things. We were supposed to start this deposition at 8:00 this morning; is that correct?

A. That's correct, and I was on call last night. Okay? And so, you know, I have other responsibilities than to sit in a three hour deposition with you all. And my primary responsibility is to patients, and not to go over other providers' notes with you and try to explain them to you. Okay? You know, that's not my responsibility. Okay? You should be asking those providers about their notes, not me. Okay?

Q. Yes, Doctor. But my point is that you're acting as if we started at 8:00, when we didn't. We actually started at about 9:30.

A. Right, and it was supposed to be an hour deposition. And we didn't -- well, we started about 9:15. It was supposed to be an hour deposition, and we're well over an hour. And we're starting now another tape, and now we're starting with the neck after having spent an hour and a half on the back. That's another hour and a half. So, you know, let's move forward. Okay? But please try to get through it

and try not to -- okay.

Q. Thank you, Doctor. And you would agree, to shortcut things, that he was sent to physical therapy initially because of a low back problem and a left shoulder issue; is that correct?

A. Correct.

Q. Not a neck issue? And I know you don't think much of the physical therapist. But going to the physical therapist --

A. Actually, I think a lot of the physical therapist, but they're not my notes. So, they're their notes. And so, again you're asking me to interpret their notes. You should be asking them to interpret their notes and tell you what they meant, not me.

Q. Okay. Doctor, you consistently have to interpret physical therapy notes when you send people to physical therapists because they send you their summaries to tell you what they've been doing, don't you?

A. I look at their notes to see whether they've made progress on what I've asked them to treat. Okay? Now, as far as what their assessments are, I generally don't look at them much. Okay? I've made my own assessment. Again, if they have made an assessment and I feel that I need to either verify

it or reassess it myself, I'll do that. But it's not my assessment. It's their assessment.

Q. But it's not unfamiliar territory for you to be reviewing physical therapy's -- physical therapist's notes because, if you referred them to them, you'll be reviewing those notes at some point; is that correct?

A. I do review their notes.

Q. And it's not uncommon for you to be reviewing MRI's that you didn't order yourself, that someone else ordered?

A. Correct.

Q. And it's not uncommon for you to see emergency room records because people come from the emergency room and come see you?

A. Correct.

Q. So, the things I've shown you aren't something that you've never seen before and haven't had to deal with before. By the very nature of what you do for a living, you have to look at those documents; isn't that correct?

A. Yeah, but it generally goes like this, you know: ''I was seen in the emergency room because I hurt my ankle.'' ''Okay, let's look at your ankle.'' Okay? Now, do I go back and look at the emergency room

doctor's assessment, generally not. Okay? I know they've been seen in the emergency room because they've hurt their ankle. I'm going to make my own assessment. Okay?

Q. Yes, sir.

A. I don't rely on their assessment. If I had to rely -- I mean, if I relied on their assessment, why do they need to see me in the first place at all? Right?

Q. Yes, sir. Well, going back to the physical therapy, he was sent to physical therapy not for neck pain, but because of left shoulder pain and low back pain initially; is that correct?

A. That's correct.

Q. And when he went to the physical therapist on November 19th, 2008, would you agree that the physical therapist assessed his left shoulder, and her assessment was, ''Assessment of joint complex above and below the shoulder demonstrated no abnormal findings and all appropriate tests were negative,'' meaning normal; is that correct? On page two of that document.

A. Yeah, so I don't know what they mean by that.

Q. Okay. And going to page five of that document, again that physical therapist notes, ''Patient's

symptoms are not consistent with any form of appropriate referral pattern and are scattered from the lower extremity to the upper extremity''?

A. That's what they've written.

Q. And quickly, on November 21, 2008, he cancels a physical therapy appointment?

A. Right.

Q. December 3rd, 2008, he cancels a physical therapy appointment?

A. That's correct.

Q. On December 10, 2008, he is not complying with his home therapy program?

A. Correct. These are the same notes we reviewed already, right?

Q. Right.

A. Okay.

Q. On December 16th of 2008, he canceled a physical therapy appointment?

A. Correct.

Q. And he was then discharged on January 20th of 2009 for non-compliance?

A. Correct.

Q. Again, quickly going through notes we've done before, but this is because we're dealing with the neck. He then gets clearance to have neck surgery

on 5/26 of 2009; is that correct?
A. Correct.
Q. And he didn't choose to do neck surgery in 2009; is that correct?
A. That's correct.
Q. Didn't choose to do neck surgery in 2010?
A. That's correct.
Q. Didn't choose to do neck surgery in 2011?
A. Correct.
Q. Will not be doing neck surgery in 2012?
A. I would assume not.
Q. And has not scheduled surgery for 2013, has he?
A. Correct?
Q. Going to the next document, and this is your document dated 9/29/2009, would you agree that, on that date, you had noted that his -- ''He intermittently has numbness in his fingers, but that has actually improved compared with previously''?
A. 9/9/2009?
Q. Yes, sir.
A. Okay. Correct.
Q. And when you checked his musculoskeletal system on that date, you found no joint swelling, his muscles weren't aching, joint pain was not in existence, multiple -- pain in multiple joints was not in

existence, and he had no weakness?
A. That's a review of systems that's completed by the patient. So, that's not -- that's not my checking him. That's a self report done by the patient.
Q. So, the patient on that date is reporting he doesn't have joint swelling, he doesn't have muscle aches, he doesn't have joint pain, doesn't have pain in multiple joints, and has no weakness; is that correct?
A. That's correct.
Q. So, that was done on 9/9 of 2009; is that correct?
A. That's correct.
Q. And then when you checked him, his general appearance was that he was in no acute distress?
A. Correct.
Q. And his motor strength in both his arms and his legs was a five of five, which is a normal finding; is that correct?
A. That's correct.
Q. Going to the next document in that set of documents that's dated 10/23 of '09 is with North Hills Medical Center?
A. That's correct.
Q. Again, he -- does he present today for a follow up for his numerous medical problems and he was feeling

much better on that date?

A. Yeah. Again, we've been through this record again before. But for his numerous medical problems, he feels much better. That's correct.

Q. You can disregard the 12/14/09 document. Does it appear on 3/1/2010 that his neck was examined and they found full range of motion, normal rotation, no instability, and I'm -- you have to assume they're saying no abnormal kyphosis and no abnormal lordosis because everybody has a curve in their spine. They're just saying that it's not abnormal.

MR. MOORHEAD:

Objection.

WITNESS:

A. Well, again, I mean, this isn't specific to the neck. It just says spine, ribs, and pelvis. This is -- this is not very specific. And again, I -- you know, it doesn't say ''no abnormal kyphosis''. It just says ''no kyphosis or lordosis''. So, I'm just reading back what it says. That's just not a valid characterization of somebody's spine.

EXAMINATION RESUMED BY MR. MCGARR:

Q. We know you don't like these records. Going to the next document, this is a Greenville Hospital document dated September 23rd, 2010. On that date,

would you agree that he's not presenting with regard to neck problems?

A. That's correct.

Q. And on the second page, he's actually specifically saying, ''I'm not having neck pain''?

A. That's correct.

Q. Going to the next document in that set of documents, this would be dated October 16th, 2010. Would you agree that he's back at the Greenville Hospital emergency room?

A. That's correct.

Q. And he's not complaining of neck problems on that date?

A. No, he's not.

Q. And on the second page, they checked his neck and he had normal range of motion?

A. That's correct.

Q. They then checked his upper extremities and the inspection was normal and he had normal range of motion?

A. Correct.

Q. Upper extremities would be moving those arms around to see if there's any radiating pain or if he can't get his shoulder -- let's say a rotator cuff tear. That's -- that's what that examination's for; is

that correct?
A. Well, I would assume, since he's being seen for an elbow problem, it would be his elbow.
Q. Then you saw him on 6/21 of 2011; is that correct? The next document.
A. Yes.
Q. And when you saw him on that date, that was where he tripped and fell?
A. Yes.
Q. And on the third page of that document, would you agree that he told you he was not having significant neck pain at that time?
A. Yes.
Q. And then he's back at the hospital on January -- on June 22nd, 2011 where he's specifically not complaining of neck problems?
A. Well, he's not complaining of neck pain. I mean, so there's a difference -- you know, he's -- you know, the concern with him is that he -- is that he has symptoms of myelopathy, which could be with neck pain or without neck pain. It has to do with spinal cord compression and loss of function of your extremities due to spinal cord dysfunction. It's really -- you know, whether you have neck pain or not with that, you know, it does not really mean

that there's not -- that he wasn't having neck problems. Myelopathy is something that a lot of times exists without neck pain. So, to try to -- you know, to characterize him not having neck pain and say he's not having neck problems is inaccurate. He's having neck problems. He has myelopathy. That's attributable to the finding in his neck. Not having neck pain, sure. But not having neck problems, no, it's not -- that's not accurate.

Q. Can you go with me to page three of that document --

A. Sure.

Q. -- where they actually did an inspection of his neck?

A. We're on my note in June?

Q. No, sir, this is where he's at the hospital.

A. Hospital, okay.

Q. On June 22nd, 2011.

A. Okay.

Q. He didn't present to the hospital with neck pain or myelopathy, did he?

A. He didn't present to the hospital with neck pain. I don't know if they tested him for myelopathy or not. I mean, he's -- he's being seen for pain and swelling in his knee and foot. That's what their -- you know, emergency room focuses on the problem that

the patient comes in with. They're not seeing him for his neck. They probably didn't test him for myelopathy. You know, I'm not sure that, unless it was profound myelopathy, that they would -- that's not something that's generally going to be in their scope of practice to tease out in a patient. It's just -- that's not what they do. I mean, that's what I do.

Q. And would you agree, on page three of that document, they did inspect his neck and they found that he had normal range of motion?

A. Correct.

Q. And then they inspected or checked out his upper extremities, which would be his arms, and they found that his inspection was normal and he had normal range of motion?

A. Correct.

Q. So, if there was something significant going on with that neck, that should have evoked a pain response, and if he was having radiating pain into the arms, that should have evoked a pain response --

A. No, this is such a generalized, you know, normal thing. This really doesn't mean much at all. I mean, inspection normal. You know, it doesn't say what was tested and what wasn't tested. I mean,

that's just -- you know, to look at that and say that that thereby signifies that the patient wasn't having myelopathy just isn't true. I mean, you know, you have to do specific tests. Just like that examination you questioned me about on the last videotape - Apley's test, McMurray's test, Lachman's test - those are all specifically looking at knee instability and/or signs of cartilage or meniscal tear in the knee. Those tests specifically being normal would indicate that those problems most likely aren't present. If you're going to look at somebody's upper extremities and say inspection normal and say that indicates there's not myelopathy, no, it doesn't. It just indicates that they probably didn't test those things. So, and there's a -- and just like with the knee, there's several tests that we would test for whether somebody's manifesting signs of myelopathy. And none of those appear to have been tested, so we can't say they weren't there. You just say, you know, they just weren't tested.

MR. McGARR:

All right. Thank you, Doctor.

RE-EXAMINATION BY MR. MOORHEAD:

Q. Doctor, I'm going to be very brief. I'm very

mindful of your need to get to your patients. Are you aware that Mr. Dawkins doesn't have any way of paying for the surgery at this point?

A. Yes, I am. Although, I'm not sure when I became aware of that, but I think it's been through, I guess, correspondence with -- I don't even know who she is, but someone that's sort of delineating costs on how much it would cost.

Q. All right, sir. Now, a couple of things on the EMS report on the date of the accident. And I'll hand this to you. This is the EMS report. Do you know what an LBB collar immobilization would be?

A. Can I see it?

Q. Yeah, it's on page two of that document that Mr. McGarr referred to.

A. I would -- I don't know, but I think it's probably a backboard, something backboard. But -- just because, when somebody gets transported from the scene of a motor vehicle collision, there are precautions in general and a lot of times they'll be transported on a backboard --

Q. All right, sir.

A. -- one of those wooden boards in a collar. And that's fairly standard procedure, so I assume that's what that is.

Q. All right, sir. Let me show you the emergency room record of the date of the accident and what Mr. Dawkins was complaining of. At the bottom of page one in bold, does it read, ''Historian reports back pain''? Down at the bottom of that page in bold black.

A. Yes.

Q. All right, sir. And go to the next page, if you would, unless you have some other comment about page --

A. Well, I mean, again, that's in the review of systems that the other attorney, we were kind of going through that before. And you know, review of systems may mean that that's an acute symptom, it may mean it's a chronic symptom. I mean, you know, it's just not specific enough to know.

Q. All right, sir. Look at the second page. Was there a presentation or clinical assessment there done about the middle of the way down where he reports about pain on palpation to the spine?

A. Yes.

Q. So, that's in the record as well as what Mr. McGarr referred to?

A. Correct.

Q. And that's on the date of the accident, or

immediately after the accident?

A. Okay.

Q. Okay. All right, sir. Now, are you the only orthopedic surgeon who has treated Mr. Dawkins for his neck and back problems since the accident of September of 2008, to the best of your knowledge?

A. Well, I think Dr. Geary has in the -- in that he saw him and, I believe, referred him to physical therapy, and the physical therapy probably consisted of some therapy for his back complaints. I guess you could say Dr. Geary's treated him as well. Although, you know, Dr. Geary's not a spine specialist orthopedics. I mean, so he --

Q. All right, sir.

A. -- didn't continue to treat him. He referred him to me.

Q. Well, from March the 11th of 2009 up until the present year, you've been the only orthopedic surgeon who's been assessing his neck and his low back problems?

A. As far as I know.

Q. Okay. And in your opinion, he needs surgery both on his neck and on his back?

A. Yes. Well, I think that, in my opinion, he needs surgery on his neck because he's developing

something called myelopathy, which is generally something that can be progressive and cause debilitation and can, at some point, not be recoverable and is concerning. As far as his low back is concerned, I think it depends on his symptomatic level and how he's doing functionally with that. So, you know, I think he needs surgery on his neck. I think that he may benefit from surgery on his low back, but it's more of an elective situation, you know, ''Do I live with the symptoms I have? Do I have surgery to try to remedy the symptoms to a certain degree?'' That's the choice for the low back. For the -- for the neck, it appears that he's developing some signs of myelopathy, some gait instability, some problems with some finger and hand dexterity. And that's in some of the later notes that I've done that -- and that's more of a situation that he should probably have that surgery.

Q. All right, sir.

A. Although, again, I haven't seen him since February of this year. So, you know, reassessing him and determining has that progressed, has it not, are the findings still there, is a necessary thing to determine that.

Q. All right, sir. And based on your last examination, it's more likely than not that he'll need both the neck and the low back surgery?

A. Correct.

Q. And the causative factor immediately precipitating that need was this automobile accident we're here about?

A. Correct.

MR. MOORHEAD:

All right. That's all I have. Thank you.

RE-EXAMINATION BY MR. MCGARR:

Q. I've got two follow ups. Are you aware that this gentleman is on Social Security disability?

A. No. Well, I mean, I guess I was aware he was on chronic disability. So, the nature of the -- right. I mean, I didn't know it was Social Security disability.

Q. And are you aware that he's either on Medicare or Medicaid?

A. No, not -- but again, you know, it's probably in my records. So, I think if I looked it up, you know, I certainly -- I mean, it's probably accessible to me, but I don't generally look at that particular thing.

Q. So, the statement that says that he can't afford this surgery is not accurate? He has the ability to

pay for this surgery because it's paid for by the government?

A. So, that makes sense to me. To the degree to what it would be paid for, I don't know. You know, we -- you know, if it's fully covered, partially covered, uncovered, I don't know because, you know, again, it's --

Q. I do, and it's paid for.

A. Okay.

MR. MOORHEAD:

I object to the form of the question.

WITNESS:

A. Because you know, this is something I don't know. I mean, I don't --

MR. MOORHEAD:

And I object to it and move to strike because, number one, it's a collateral source. Number two, it would be Medicare, not Social Security disability. And number three, if Medicare pays, they get their money back. So, but I object and move to strike, and that's all I have.

RE-EXAMINATION RESUMED BY MR. McGARR:

Q. That's okay. I don't know who told you --

A. I don't understand all that, so --

Q. It's okay. It's fine. I just -- you had been --

someone had asserted to you they couldn't do the surgery because they couldn't afford it, so that's why I had to ask the question.

A. No, I understand.

MR. McGARR:

We're done.

MR. MOORHEAD:

Yeah, we're done.

VIDEOGRAPHER:

This concludes the deposition of Dr. McHenry. Off the record at 11:16 a.m.

(There being no further questions, the deposition was concluded at 11:16 a.m.).

CERTIFICATE

I, the undersigned, Lisa M. Nowell, Notary Public in and for the State of South Carolina, do hereby certify that the foregoing deposition was taken on the 26th day of September, 2012;

That the within deponent was sworn to tell the truth and that the foregoing is an accurate transcription of the testimony taken under oath;

I further certify that I am neither Counsel nor Solicitor to any of the parties in said suit, nor interested in the event of the cause.

IN WITNESS WHEREOF, I have hereunto set my hand and seal this 11th day of October, 2012.

_____

Lisa M. Nowell

NOTARY PUBLIC FOR SOUTH CAROLINA

MY COMMISSION EXPIRES 11/24/2013.
