DECISION AND ORDER

OF THE

SOUTH CAROLINA WORKERS' COMPENSATION COMMISSION

W.C.C. FILE NO.: 0307461

Alvin L. Menie,

Employee/Claimant,

-vs-

State Accident Fund,

Employer and Carrier, Defendant.

HEARING:	Held on January 30, 2012, in Columbia, South Carolina per notices timely and properly served upon all parties of interest and pursuant to a stipulation of the parties as to venue.
APPEARANCES:	Preston F. McDaniel, Esquire of Columbia, South Carolina appearing on behalf of the Claimant. Andrew E. Haselden, Esquire of Charleston, South Carolina appearing on behalf of the Defendant.
PURPOSE OF THE HEARING:	To determine the issues as set forth on the Forms 50 and 51.
DECISION AND ORDER:	By: Commissioner G. Bryan Lyndon
FILED:	*April 11, 2012*

STATEMENT OF THE CASE

This matter was heard before the undersigned Commissioner on January 30, 2012, in Columbia, South Carolina pursuant to a Form 50 (Employee's Request for Hearing) filed on behalf of the Claimant on or about May 12, 2011, and the Defendants' Form 51 (Employer's Answer to Request for Hearing) filed on behalf of the Defendants on or about June 9, 2011. One or more prior Hearings had been set on the aforementioned Forms 50 and 51; however, those Hearings were cancelled and/or postponed due to various procedural and/or circumstantial reasons that are not relevant to the issues that were before the undersigned Commissioner on January 30, 2012.

The claim involves a denied claim of a cardiac injury and/or condition, which the Claimant alleges to have resulted from unusual and extraordinary conditions of employment. More specifically, the Claimant alleges he was required to do the work of three premium auditors by the State Accident Fund for a period of time from on or about January 1, 2003 until on or about March 3, 2003. The Defendant denies the Claimant's work conditions during the aforementioned period were unusual and/or extraordinary, and they further deny the Claimant is entitled to any medical benefits, indemnity benefits, temporary disability benefits, and/or permanency benefits secondary to his heart condition, which the Defendant claims is totally unrelated to his employment conditions.

Although the Claimant's Form 50 (Request for Hearing) and Form 58 (Pre-Hearing Brief) also alluded to an alleged psychological injury resulting from the same allegedly unusual and extraordinary work conditions; the Claimant's position at the January 30, 2012 Hearing was limited to his contentions that unusual and extraordinary work conditions at the State Accident Fund from on or about January 1, 2003 to March 3, 2003, had caused him to suffer an acute onset of atrial fibrillation on March 3, 2003 and that condition was compensable under § 42-1-160 of the South Carolina Workers' Compensation Act (hereinafter "the Act") and common law jurisprudence

interpreting the compensability of heart attacks and other cardiac conditions resulting from unusual and extraordinary conditions of employment.

The Claimant further maintained, represented and stipulated that he was not making any claim for back due or ongoing temporary total disability compensation, nor was he making any claim that he was permanently and totally disabled in accordance with § 42-9-10 of the Act as a result of his cardiac contention. Rather, the Claimant sought payment of all past causally related medical expenses, as well as all future causally related and compensable medical expenses pursuant to § 42-15-60 of the Act and/or Dodge v. Bruccoli, Clark, Layman, Inc., 334 S.C. 574, 514 S.E.2d 593 (Ct. App. 1999). With regard to permanency, the Claimant maintained, represented and stipulated that he was only seeking an award of scheduled permanent partial disability benefits of up to 250 weeks pursuant to R.67-1101 of the South Carolina Code of Regulations. Finally, the Claimant maintained he had an expert medical opinion to support his contentions as to the causality and compensability of his cardiac injury and/or condition.

The Defendant took the position that the events of on or about January 1, 2003 to on or about March 3, 2003 did not in any way constitute unusual and extraordinary circumstances and/or conditions of employment. The Defendant further indicated the Claimant's personnel records reflected that the Claimant had never worked more than a forty hour work week during the period in question. In addition, the Defendant maintained the Claimant had previously attempted to allege his cardiac condition was related to his military service during the Vietnam War when the Claimant submitted an application for Veterans Disability Benefits to the United States Department of Veterans Affairs (hereinafter referred to as "the V.A.").

In light of these contentions, the Defendant further maintained the Claimant could not meet his burden of proof under § 42-1-160 of the Act and/or common law jurisprudence interpreting the compensability of heart attacks and other cardiac conditions resulting from unusual and

extraordinary conditions of employment. The Defendant's' denial of compensability was also based upon the testimony of the Claimant's former co-workers and/or supervisors regarding the Claimant's work conditions and work responsibilities during the period in question.

Finally, the Defendants addressed its interpretation of the common law jurisprudence relevant to the case at bar by presenting the undersigned Commissioner with a Memorandum of Law regarding the Defendant's contention that the facts of the present case are clearly governed by the holdings in the cases of Sims v. S.C. State Commission of Forestry, 235 S.C. 1, 109 S.E.2d 701 (1959), West v. City of Spartanburg, 236 S.C. 553, 115 S.E.2d. 295 (1960), and Lockridge v. Santens of America, Inc., 344 S.C. 511, 544 S.E.2d 842 (Ct. App. 2001). In addition, the Defendant's Memorandum of Law summarized the Defendant's contention that the medical causation statement(s)/questionnaire(s) obtained from Charles W. Hendricks, M.D., a cardiologist, were of no evidentiary value to the case at bar because they constituted medical opinion testimony based on hypothetical facts that were not supported by facts in evidence; and therefore, should not be considered by the undersigned Commissioner pursuant to the holdings in Brown v. La France Industries, 286 S.C. 319, 333 S.E.2d 348 (Ct. App. 1985) and Young v. Tide Craft, Inc., 270 S.C. 453, 242 S.E.2d 671 (1978).

STIPULATIONS

There were no objections to jurisdiction, venue or the vast majority of the parties' APA Submissions. To the extent there were any objections to the parties' APA Submissions, those will be addressed hereinbelow. The parties further stipulated to an average weekly wage of Seven Hundred Seventy-Five and 11/100 ($775.11) Dollars, with a resulting compensation rate of Five Hundred Sixteen and 77/100 ($516.77) Dollars. It was further stipulated that the Commission's file became part of the record, with the exception of self-serving declarations and unstipulated medical reports. Finally, the Claimant's attorney stipulated that he was responsible for paying to the

Defendant the sum of Two Hundred Sixteen and 38/100 ($216.38) Dollars for outstanding copying and processing charges associated with the expenses incurred by the Defendant in responding to a SCWCC Form 27 (Subpoena) served upon the Defendant commanding production of an extensive array of documents related to the case at bar.

ADMINISTRATIVE PROCEDURES ACT SUBMISSIONS

As indicated above, there was an objection raised by the Claimant's attorney to the Defendant's Exhibit "B" submitted as part of the Defendant's APA Submission. This Exhibit (Defendant's APA Submissions, pgs. 34-41) consisted of an article regarding atrial fibrillation that was posted on the website *CardioSmart* (www.cardiosmart.org). The undersigned Commissioner ruled that Defendant's Exhibit "B" was an admissible and permissible submission; however, he further indicated the article would be given very little weight when the undersigned Commissioner decided this matter.

With the Defendant's Exhibit "B" allowed into evidence, the parties' APA Submissions, which were otherwise stipulated to being admissible and permissible APA Submissions, consisted of the following:

Claimant's APA Submissions

1. Medical Correspondence and Opinions/Questionnaires prepared and/or completed by Charles W. Hendricks, M.S. and dated March 24, 2005 – December 7, 2010 (Claimant's APA Submissions pgs. 1 - 10);

2. Medical/EMS Report dated March 3, 2003 (Claimant's APA Submissions pgs. 11 – 12);

3. Medical Reports from Lexington Medical Center dated March 4, 2003 through September 24, 2008 (Claimant's APA Submissions pgs. 13 – 56);

4. Medical Reports from Charles W. Hendricks dated March 21, 2003 through September 24, 2008 (Claimant's APA Submissions pgs. 57 – 105);

5. Medical/Psychological Report of Selman Watson, Ph.D. dated July 16, 2003 (Claimant's APA Submissions pgs. 106 – 111); and

6. Documents and Records from the State Accident Fund (Claimant's APA Submissions pgs. 112 – 190).

Defendant's APA Submissions

1. Medical Reports from Lexington Medical Center dated March 3, 2003 through March 7, 2003 (Defendant's APA Submissions pgs. 1 – 4);

2. Medical Reports from Columbia Heart Clinic, P.A. dated March 21, 2003 through February 3, 2011 (Defendant's APA Submissions pgs. 5 – 19);

3. Medical Opinion Statement/Letter of Michael R. Zile, M.D. dated August 11, 2011 (Defendant's APA Submissions pg. 20); and

4. Medical Reports and Documents Regarding Claimant's V.A. Benefits from Dorn V.A. Medical Center dated November 19, 2009 through September 17, 2011 (Defendant's APA Submissions pgs. 150 – 173).

Defendant's Exhibits

"A." Affidavit of Counsel dated August 10, 2011 (Defendant's APA Submission's pgs. 21 – 33);

"B." Article on Atrial Fibrillation from *CardioSmart* dated June 10, 2011 (Defendant's APA Submissions pgs. 34 – 41);

"C." Personal Locator Forms for Claimant dated January 1, 2002 through March 31, 2003 (Defendant's APA Submissions pgs. 42 – 56);

"D." Monthly Timesheets for Carla Johnson dated January 3, 2003 through March 31, 2003 (Defendant's APA Submissions pgs. 57 – 59);

"E." Monthly Timesheets for Claimant dated January 1, 2002 through August 31, 2004 (Defendant's APA Submissions pgs. 60 – 91); and

"F" Request for Leave Forms dated February 28, 2002 through September 3, 2004 (Defendant's APA Submissions pgs. 92 – 149).

EVIDENCE SUMMARY

The Claimant presented the testimony of Ms. Shawn Holman, a former employee of the Defendant. The Claimant testified on his own behalf at the conclusion of Ms. Holman's testimony. He did not present any other witness testimony (including any expert testimony via any deposition(s)). The Defendant presented the testimony of two fact witnesses, Mr. Gerald Allen Murphy and Mr. Kirk J. Adair, both of whom are presently employed by the Defendant. Mr. Murphy was also employed by the Defendant during all periods relevant to this matter.

Ms. Holman was the first witness called by the Claimant. Ms. Holman testified she was employed by the Defendant for a period of approximately fifteen years, and that she was working as a premium auditor at the time she resigned her position with the Defendant on or about December 31, 2002 (Tr. p. 12). Ms. Holman explained and testified the Defendant, at some point prior to her departure, initiated an organizational plan known as "Team Concept," which consisted of dividing the State of South Carolina into three[1] geographic regions and assigning a team of adjusters, adjusters' assistants, and other personnel essential to the Defendant's claims management and premium auditing processes to each region (Tr. p. 13). Each team was responsible for roughly 200 accounts (i.e., various state agencies, counties, municipalities, etc. who received their workers'

[1] Ms. Holman actually testified the State of South Carolina was divided into three or four regions as part of "Team Concept;" however, the testimony of all the various witnesses appears to rather strongly indicate the State was divided into just three regions.

compensation insurance coverage from the Defendant), and there was only a single premium auditor assigned to each team. (Tr. p. 13). According to Ms. Holman's testimony, only premium auditors could address e-mails pertaining to premium issues, and the premium auditors were also responsible for conducting an audit at the end of each the insureds' policy periods. (Tr. pp. 13, 14).

Ms. Holman further testified that the premium auditors were responsible for taking an individual insured's experience modifier (hereinafter "E-Mods") and calculating the insured's premium increase based thereon; these E-Mods often resulted in an insured's premiums being increased by two or three times the original quoted premium according to Ms. Holman. (Tr. pp. 14 – 16). Premium auditors were also responsible for meeting with representatives from each individual insured to discuss their respective premium increases; it was commonplace for an insured to want to challenge premium increases and/or their E-Mods. (Tr. pp. 15 – 17).

Ms. Holman further testified and explained that the Defendant's insureds were broken up into two distinct groups; the first group being state agencies, which were on a July 1st to June 30th fiscal year, and the second group being other entities/political subdivisions such as counties, cities, municipalities, etc., which operated on a fiscal year based on the standard calendar year (i.e., January 1st to December 31st). (Tr. pp. 18 – 19). Ms. Holman testified she typically performed 200 audits per year. (Tr. p. 19). At this point, the Claimant's attorney presented Ms. Holman with Page 113 of the Claimant's APA Submissions, which was a letter issued by the Defendant notifying its insured of a 24.7% increase in their base premiums that would be going into effect on January 1, 2003 (Tr. pp. 20, 21). After reviewing said letter, Ms. Holman testified there had been no "significant" increase in base premiums made by the Defendant from 1996 until this increase in 2003 (Tr. pp. 20, 21). Although she was not employed by the Defendant at the time this base premium increase would have taken effect, Ms. Holman testified and speculated the Defendant's insureds would have been

upset, confused and/or in need of clarification with respect to this base premium rate increase. (Tr. pp. 21 – 23).

With regard to the number of premium auditors employed by the Defendant at the time Ms. Holman resigned in December of 2002, Ms. Holman testified the Defendant had employed three premium auditors at that time (Ms. Holman, the Claimant and Ms. Carla Johnson). (Tr. p. 23). Ms. Holman further testified she was a member of the United States Army Reserve at this time; and therefore, the Claimant would have to cover for her when she was fulfilling her military obligations. (Tr. pp. 24, 25). Ms. Holman also testified the Defendant's computer program it employed to help produce E-Mods and perform other calculations essential to the auditing of premiums was still new in 2002 and was experiencing considerable technical glitches. (Tr. pp. 25, 26).

With regard to Carla Johnson, Ms. Holman testified Ms. Johnson was in poor health and "probably" would have had spotty attendance at work in late 2002. (Tr. pp. 27, 28). Ms. Holman further testified that she and the Claimant would cover for Ms. Johnson when Ms. Johnson's health rendered her unable to work. (Tr. p. 28). Finally, the Claimant's attorney presented Ms. Holman with Page 186 of the Claimant's APA Submission, which was a positive job evaluation the Claimant had received from his superiors at the Defendant on or about October 10, 2003; and in response to questioning regarding the same, Ms. Holman agreed the Claimant was a good employee during the time they worked together for the Defendant. (Tr. pp. 30 – 33).

Prior to Ms. Holman's cross-examination by the Defendant's attorney, she was examined by the undersigned Commissioner. In response to the Commissioner's questioning, Ms. Holman agreed that the volume and intensity of the premium auditors' workloads would vary; that work would sometime come in fits and starts; and that it was typical for the premium auditors to assist one another when circumstances warranted. (Tr. pp. 34-36). The Commissioner also asked Ms. Holman about the Claimant's contention he was required to handle premium auditing functions on

all of the approximately 600 insureds' accounts for a period from on or about January 1, 2003 until March 3, 2003. In response to these questions, Ms. Holman indicated that dealing with all 600 accounts would be possible but that some of the other duties of a premium auditor would have to be neglected. (Tr. pp. 37, 38). The Commissioner further questioned Ms. Holman as to what, if any, penalty a premium auditor would be subject to for not having a certain number of audits completed by a certain point in the calendar year, and Ms. Holman testified she was never personally punished for such issues. (Tr. pp. 38, 39).

Following a brief re-direct examination, Ms. Holman was cross-examined by the Defendant's attorney. In response to this questioning, she indicated that meetings between premium auditors and angry representatives from the individual insureds "went on all of the time," and not just after the base premium increase instituted at the beginning of 2003. (Tr. p. 45). Ms. Holman further conceded that insureds were almost never happy when they received notification of any premium increase. (Tr. p. 45). Ms. Holman further conceded there had been a 10.9% base premium increase in 2001. (Tr. pp. 46, 47). More importantly, Ms. Holman conceded that premium auditors have up to 180 days to perform a premium audit following the close of a policy period. (Tr. pp. 46, 47). Likewise, Ms. Holman could not dispute the 'new' computer system she alluded to on her direct examinations had come on line by May 25, 1999. (Tr. pp. 47, 48). In addition, Ms. Holman had no direct knowledge to dispute that Mr. Warren Farray, who the Defendant hired as a premium auditor effective March 4, 2003, had in excess of twenty years experience as a premium auditor and underwriter. (Tr. pp. 48, 49). Finally, Ms. Holman acknowledged that other employees of the Defendant could answer phone calls during times of high call volume. (Tr. p. 49).

The Claimant then testified on his own behalf. The Claimant is 68 years old and married with no dependent children or other dependents besides his wife. (Tr. p. 51). He has a B.A. in Economics, as well as Associates Degrees in Accounting and Business Management, and he served

three years in the United States Army during the Vietnam War. (Tr. p. 53). The Claimant does not dispute being exposed to Agent Orange during the Vietnam War, and following the filing of claim for V.A. Disability Benefits in July of 2009; the Claimant began receiving V.A. Disability Benefits secondary to health conditions resulting from said exposure. (Tr. pp. 52-54). The Claimant became a resident of the State of South Carolina in July of 1968, and he went to work for the Defendant on March 17, 1984. (Tr. p. 55). The Claimant testified he became a premium auditor in May of 1993. (Tr. p. 57). The Claimant further testified the Defendant's computer system was still having issues at the times relevant to the case at bar, and he specifically testified these glitches would require E-Mods to be verified and rerun. (Tr. pp. 58-60). The Claimant did not dispute that only the Defendant's insureds that were counties, cities, municipalities, and/or other local political entities would have been being audited during the period the Claimant alleges to have been exposed to unusual and extraordinary conditions of employment, and he admitted that none of the audits for said insured had to be done any earlier than 180 days from the end of their policy period (i.e., December 31st). (Tr. p. 62). The Claimant testified that Carla Johnson went out of work on December 27, 2002; and therefore, when the Claimant returned to work following the Christmas and New Year's Holliday(s) on or about January 2, 2003; he was presented with a significant amount of phone calls, voicemails, etc. pertaining to the 24.7% base premium increase. (Tr. pp. 62, 63, 68, and 69). The Claimant testified his own personal estimates/calculations was that he spent 58% of his work hours during the period from January 2, 2003 until March 3, 2003 covering for the duties and responsibilities of the other two premium auditors. (Tr. p. 70).

The Claimant testified the new auditor hired to replace Ms. Johnson started on or about March 3, 2003, which was the same day the Claimant alleges to have first experienced symptoms of his atrial fibrillation. (Tr. p. 72). When asked why the Claimant felt the need to devote so much time to the duties of the other auditors, the Claimant testified that "...with [his] ego [he] thought

[he] could handle everything that came forth in [January and February of 2003]...," (Tr. p. 75). In addition, the Claimant indicated his perception of the temporary increase in his workload experienced in January and February of 2003 was that it was manageable and that he "...could handle all of those..." (Tr. p. 75).

With regard to his atrial fibrillation, the Claimant testified that he has been hospitalized on three subsequent occasions (i.e., in addition to March 3, 2003), and he testified that he suffers from fatigue and extreme loss of the ability to walk even limited distances. (Tr. pp. 87-90). The Claimant's current medications being taken to treat his atrial fibrillation are set forth on Page 85 of the Claimant's APA Submissions. (Tr. pp. 87, 88). The Claimant acknowledged (notwithstanding any of his medical conditions and/or the cause(s) thereof) that he worked for the Defendant herein until May 1, 2009. (Tr. p. 93). The Claimant's estimated out-of-pocket medical expenses that he alleges to be causally related and compensable total roughly $40,000:00 according to the Claimant's testimony. (Tr. p. 96).

The Claimant was then briefly cross-examined. During cross-examination, the Claimant admitted he first treated with Dr. Hendricks on March 3, 2003, at Lexington Medical Center and had continued treating with him since that date. (Tr. pp. 98, 99). When asked to present some tangible/documentary evidence of his allegedly excessive and/or increased work duties from January 1, 2003 to March 3, 2003; the Claimant acknowledged he had no such documentation in his APA Submissions (Tr. pp. 101-104). Although the Claimant contended that 1/6 of his audits were supposed to be done by the end of January each year, the Claimant could point to no specific instance where he was punished or demoted for failing to do so. (Tr. pp. 104, 105). Likewise, the Claimant admitted he had no documentation to substantiate his claim of having sustained $40,000.00 in allegedly causally related and compensable medical expenses, at which point the

Claimant's attorney stipulated the Claimant had no such documentation in the record. (Tr. pp. 106 – 107).

The undersigned Commissioner then conducted his own rather extensive verbal examination of the Claimant. In response to the Commissioner's questions, the Claimant testified that he did request assistance once Ms. Johnson had gone out on leave and Ms. Holman had resigned, and the Claimant admits the Defendant hired a new employee/trainee on March 3, 2003. (Tr. pp. 107, 108). The Claimant also admitted the Defendant provided him with his own in-office printer to reduce the time the Claimant spent traversing the hallways to and from the printer, and the Claimant admitted he was still able to take thirty minutes for lunch each day during the period in question. (Tr. pp. 108, 109).

In addition, the Claimant admitted the decision to take on the extra work was his own, and he acknowledged there would have been no adverse consequences to simply refusing to take on the other auditors' work. (Tr. p. 10). The Claimant confirmed his atrial fibrillation had required a total of four hospitalizations over the last nine years, and he acknowledged his kidney disease and diabetes were causally related to exposure to Agent Orange. (Tr. p. 112). The Claimant testified he received $941.00 in V.A. Disability Benefits, and he confirmed for the Commissioner that he voluntarily retired in 2009 as part of the State of South Carolina's TERI Plan. (Tr. p. 113).

During a brief re-direct examination, the Claimant clarified that his limitations and complications resulting from his atrial fibrillation are not limited to those requiring hospitalization. (Tr. pp. 114, 115). The Claimant's case was then concluded.

The Defendant's first witness was Mr. Gerald Allen Murphy. Mr. Murphy has been employed by the Defendant since March of 1995, and he is presently the Defendant's Manager of Administrative Services. (Tr. p. 117, 123). Mr. Murphy testified the Defendant utilized a program known as "Locator" to track, monitor and compile employee attendance. (Tr. p. 118). Mr. Murphy

testified he used this program to compare and contrast the Claimant's work hours in January and February of 2002 with the Claimant's work hours in January and February of 2003. (Tr. p. 119). This study of the Locator data established the Claimant worked an average of sixteen extra minutes per day in January and February of 2003 than he had during those same two months of the prior year. (Tr. p. 119). Mr. Murphy also indicated the Locator data reflected the Claimant was working as the lone premium auditor for a sum total of twenty-five business days during the period in question. (Tr. p. 119). Page 58 of the Defendant's APA Submissions and Mr. Murphy's testimony also establish Ms. Carla Johnson returned from medical leave on February 10, 2003, and Mr. Farray (who had in excess of twenty years of premium auditing and underwriting experience) started on March 3, 2003. (Tr. pp. 119, 120).

With regard to the issue of whether the employer could function with one premium auditor, Mr. Murphy testified the Defendant did so from November of 2009 until January of 2010 and again from February of 2010 until September of 2010. (Tr. pp. 120, 121). The Defendant has never returned to three premium auditors at any point following the Claimant's retirement (in 2009). (Tr. p. 121).

Mr. Murphy did not dispute the fact the Claimant was a well-liked and gregarious employee during his tenure with Defendant. (Tr. p. 122). However, Mr. Murphy did not agree with and/or confirm the Claimant's testimony about having to have 1/6 of his audits done by the end of January. (Tr. p. 123). In fact, Mr. Murphy explained and testified that January is typically a month where the total number of audits performed is very low due to the lack of the requisite information needed from the insureds to do the audit. (Tr. p. 125). Mr. Murphy indicated his review of various data and documents in the Defendant's possession had indicated there were no premium audits done in January of 2002. (Tr. p. 125). Although the Claimant's medical opinion(s)/questionnaire(s) from Dr. Hendricks are premised on a contention/allegation that the number of audits the Claimant was

asked to do increased "threefold during the time of January through March of 2003, Mr. Murphy disputed it would have been possible for such an increase in audits to have incurred since the requisite data would not have been available to do the audits. (Tr. p. 125).

Finally, Mr. Murphy addressed the basis and rationale for the Claimant receiving the pay increase memorialized and summarized in a letter issued to the Claimant on April 15, 2003 (Claimant's APA Submissions, p. 112), and Mr. Murphy explained the Defendant was obligated to have objective reasons for the pay increase or it otherwise could not have given it to the Claimant. (Tr. pp. 125-128). The undersigned Commissioner then interjected with a question of Mr. Murphy regarding the efforts to which the Defendant went to in order to keep similarly situated employees at similar salaries, and Mr. Murphy confirmed the Defendant does try to do so. (Tr. p. 129).

The final witness was Mr. Kirk J. Adair, who is presently employed by the Defendant as a premium auditor. (Tr. p. 142). Mr. Adair came to the Defendant after many years working for various private sector insurers as a premium auditor. (Tr. p. 142). Mr. Adair testified he worked as the lone premium auditor from January 14, 2011 through March 14, 2011 without virtually any tangible difficulty, and he described his current position as being noticeably less stressful than similar positions in the private sector. (Tr. pp. 142-144). Mr. Adair also confirmed he continues to do premium audits for all of the Defendant's insureds with the assistance of only one additional premium auditor. (Tr. p. 144).

Mr. Adair also explained the current audit process to the Commissioner via his testimony, and on cross-examination confirmed the current audits are done using N.C.C.I. Classifications whenever possible and that the auditors no longer have to create their own codes. (Tr. pp. 146. 147). Following the conclusion of Mr. Adair's testimony, the Defendant's case was presented.

The medical evidence submitted by the parties speaks for itself. To the extent the medical evidence had any impact on the undersigned Commissioner's decision; the undersigned Commissioner will address those reports in his Findings of Fact set forth hereinbelow.

CONCLUSION

The undersigned Commissioner has thoroughly reviewed the evidence in the record, considered the testimony summarized hereinabove and reached a decision. Based on the evidence presented, I find that the Claimant has failed to meet his burden of proof with regard to his alleged heart injury/condition as is required by § 42-1-160 of the Act and the common law of this State; therefore, the Claimant is not entitled to any past or future medical benefits; temporary disability benefits; and/or any permanent disability of any kind or nature secondary to his alleged heart injury/condition.

Accordingly, the Claimant is not entitled to any further benefits under the South Carolina Workers' Compensation Act secondary to the above-captioned matter.

FINDINGS OF FACT

1. All parties to this proceeding are subject to and bound by the terms and provisions of the South Carolina Workers' Compensation Act (hereinafter and hereinbefore "the Act").

2. The Claimant alleges injury to the heart as a result of unusual and extraordinary conditions of employment on March 3, 2003.

3. The Claimant was working as an auditor and claims that from January 1, 2003 to March 3, 2003, he was under stress as a result of the illness of a co-worker and labor turnover. The period was about 25 business days. The Claimant stated the department reorganization required more work.

4. The Claimant did not work excessive overtime, and the evidence shows the Claimant worked no more than 40 hours per week.

5. A witness for the Claimant (Ms. Holman) testified about the team concept in the auditing department as compared with the department concept. She also testified that during the period of time in question (2002/2003) there was a new computer system which had glitches at the outset.

6. The Claimant's witness (Ms. Holman) also testified that when they went to the team concept, they would still help each other so the job would not go undone.

7. The Claimant's witness (Ms. Holman) also testified that workloads always varied from one year to the next.

8. The Claimant's witness testified it could take up to 180 days to complete an audit. The Claimant stated that if the computer system was installed in 1999, then there were still problems with it in 2002.

9. A witness (Mr. Murphy) for the Defendant testified the Claimant worked for about 25 business days alone in the audit department. There was no overtime worked and a trainee had been hired to assist the Claimant.

10. The Defendant's witness (Mr. Murphy) stated that there had been other times when auditors worked in a like position for as long as 8 months.

11. As of the date of Hearing, the Defendant was employing just two auditors, and the Defendant never returned to three auditors.

12. The Defendant's witness (Mr. Murphy) testified that Claimant never asked for help. If he had it was available.

13. The Defendant's witness (Mr. Murphy) was credible.

14. A second witness for the Defendant (Mr. Adair) testified he had handled the job by himself and it was not as difficult as his previous jobs.

15. The Claimant has had numerous health problems some of which are being treated by the VA due to exposure to Agent Orange in Vietnam.

16. After considering all of the evidence, I find Claimant failed to prove his heart condition was a result of unusual and extraordinary conditions of employment.

17. Linking heart disease to work based on what is unusual and extraordinary is impossible for a doctor to conclude, legally.

18. What pressure the Claimant was under during the short period of time in 2003 was short in duration and not unusual based on witness testimony.

19. Labor turnover, illness of co-workers and computer problems are common to almost all work environments and are not unusual.

20. Any pressure the Claimant was under was self-imposed. The Claimant stated his ego would be damaged if he did not keep up. The Claimant did not work overtime.

21. The Claimant voluntarily took on the position, was commended for his work and received a pay increase.

22. The Claimant saw Dr. Hendricks six times in 2003 and 2004 for heart problems and never mentioned stress. None of Dr. Hendricks notes from that period mention stress.

23. The applicable Compensation Rate is Five Hundred Sixteen and 77/100 ($516.77) Dollars, which is based on an Average Weekly Wage of Seven Hundred Seventy-Five and 11/100 ($775.11) Dollars.

24. The Claimant's claim for any benefits Under the Act is denied.

RULINGS OF LAW

1. Under § 42-1-130, the Claimant was a covered employee and under § 42-1-140, the Employer was a covered Employer at the time in question.

2. Under § 42-1-160, and pursuant to the holdings in Sims v. S.C. State Commission of Forestry, 235 S.C. 1, 109 S.E.2d 701 (1959), West v. City of Spartanburg, 236 S.C. 553, 115 S.E.2d. 295 (1960), and Lockridge v. Santens of America, Inc., 344 S.C. 511, 544 S.E.2d 842 (Ct. App. 2001); the Claimant failed to demonstrate that he suffered a compensable injury by accident to his heart and/or a compensable cardiac condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 through March 3, 2003.

3. Under § 42-15-60, the Claimant is not entitled to medical care, benefits and/or treatment (past or future) secondary to his alleged work injury of January 19, 2011.

4. Under § 42-9-10, § 42-9-20, § 42-9-260, § 42-9-210, and Regulations 67-501 through 510; the Claimant is not entitled to any temporary disability compensation secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

5. Under § 42-9-10, § 42-9-20 and § 42-9-30, the Claimant did not sustain any compensable disability, permanent loss of use to any body part and/or permanent loss of earning capacity secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

6. Under § 42-1-40, the Claimant's average weekly wage is Seven Hundred Seventy-Five and 11/100 ($775.11) Dollar with a corresponding compensation rate of Five Hundred Sixteen and 77/100 ($516.77) Dollars

7. Under § 42-1-160, § 42-15-60, § 42-9-10, § 42-9-20, § 42-9-30, § 42-9-260, and Regulations 67-501 through 510, the Claimant failed to establish a compensable claim for benefits under the Act; and therefore, the Claimant is not entitled to any benefits of any kind under the Act.

ORDER

IT IS, THEREFORE, HEREBY ORDERED that the Claimant's claim for medical and/or any compensation benefits under the Act as a result of an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003 is hereby denied due to the Claimant's failure to establish the requisite burden of proof to support and prove his allegations.

IT IS FURTHER ORDERED is not entitled to any further medical, monetary and/or compensation benefits of any kind under the Act secondary an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003

IT IS FURTHER ORDERED that the Claimant's attorney shall tender to the Defendant a payment in the amount of Two Hundred Sixteen and 38/100 ($216.38) Dollars in accordance with stipulation contained hereinabove.

IT IS SO ORDERED.

G. Bryan Lyndon, Commissioner
South Carolina Workers' Compensation Commission
Dated: *April 11, 2012*

CERTIFICATE OF SERVICE

This is to certify the undersigned has this date served this order in the above entitled action upon all parties to this cause by sending an electronic copy hereof by electronic mail addressed to the attorney or attorneys for said parties or by depositing a copy hereof, postage paid, in the United States mail addressed to any unrepresented party.

By Tamara Morris on April 11, 2012

APPELLATE PANEL

DECISION AND ORDER OF THE

SOUTH CAROLINA WORKERS' COMPENSATION COMMISSION

WCC File No.: 0307461

Alvin L. Menie,

Employee/Claimant,

vs.

The State Accident Fund,

Employer,
Insurance Carrier,
Defendant.

Appellate Panel Review held in Columbia, South Carolina, on August 28, 2012, per notices timely and properly served on all parties of interest.

Appellate Panel Decision and Order filed 11/29/2012

APPEARANCES:

The Claimant was represented by Preston F. McDaniel, Esquire, of Columbia, SC

The Defendant was represented by Andrew E. Haselden, Esquire, of Howser, Newman & Besley, LLC, Charleston, SC

STATEMENT OF THE CASE

This matter came to be heard before Commissioner G. Bryan Lyndon in Columbia, South Carolina, on January 30, 2012, pursuant to the Plaintiff's Form 50 and the Defendant's Form 51. On April 11, 2012, he issued an Order stating in pertinent part as follows:

FINDINGS OF FACT

1. All parties to this proceeding are subject to and bound by the terms and provisions of the South Carolina Workers' Compensation Act (hereinafter and hereinbefore "the Act").

2. The Claimant alleges injury to the heart as a result of unusual and extraordinary conditions of employment on March 3, 2003.

3. The Claimant was working as an auditor and claims that from January 1, 2003 to March 3, 2003, he was under stress as a result of the illness of a co-worker and labor turnover. The period was about 25 business days. The Claimant stated the department reorganization required more work.

4. The Claimant did not work excessive overtime, and the evidence shows the Claimant worked no more than 40 hours per week.

5. A witness for the Claimant (Ms. Holman) testified about the team concept in the auditing department as compared with the department concept. She also testified that during the period of time in question (2002/2003) there was a new computer system which had glitches at the outset.

6. The Claimant's witness (Ms. Holman) also testified that when they went to the team concept, they would still help each other so the job would not go undone.

7. The Claimant's witness (Ms. Holman) also testified that workloads always varied from one year to the next.

8. The Claimant's witness testified it could take up to 180 days to complete an audit. The Claimant stated that if the computer system was installed in 1999, then there were still problems with it in 2002.

9. A witness (Mr. Murphy) for the Defendant testified the Claimant worked for about 25 business days alone in the audit department. There was no overtime worked and a trainee had been hired to assist the Claimant.

10. The Defendant's witness (Mr. Murphy) stated that there had been other times when auditors worked in a like position for as long as 8 months.

11. As of the date of Hearing, the Defendant was employing just two auditors, and the Defendant never returned to three auditors.

12. The Defendant's witness (Mr. Murphy) testified that Claimant never asked for help. If he had it was available.

13. The Defendant's witness (Mr. Murphy) was credible.

14. A second witness for the Defendant (Mr. Adair) testified he had handled the job by himself and it was not as difficult as his previous jobs.

15. The Claimant has had numerous health problems some of which are being treated by the VA due to exposure to Agent Orange in Vietnam.

16. After considering all of the evidence, I find Claimant failed to prove his heart condition was a result of unusual and extraordinary conditions of employment.

17. Linking heart disease to work based on what is unusual and extraordinary is impossible for a doctor to conclude, legally.

18. What pressure the Claimant was under during the short period of time in 2003 was short in duration and not unusual based on witness testimony.

19. Labor turnover, illness of co-workers and computer problems are common to almost all work environments and are not unusual.

20. Any pressure the Claimant was under was self-imposed. The Claimant stated his ego would be damaged if he did not keep up. The Claimant did not work overtime.

21. The Claimant voluntarily took on the position, was commended for his work and received a pay increase.

22. The Claimant saw Dr. Hendricks six times in 2003 and 2004 for heart problems and never mentioned stress. None of Dr. Hendricks notes from that period mention stress.

23. The applicable Compensation Rate is Five Hundred Sixteen and 77/100 ($516.77) Dollars, which is based on an Average Weekly Wage of Seven Hundred Seventy-Five and 11/100 ($775.11) Dollars.

24. The Claimant's claim for any benefits Under the Act is denied.

RULINGS OF LAW

1. Under § 42-1-130, the Claimant was a covered employee and under § 42-1-140, the Employer was a covered Employer at the time in question.

2. Under § 42-1-160, and pursuant to the holdings in Sims v. S.C. State Commission of Forestry, 235 S.C. 1, 109 S.E.2d 701 (1959), West v. City of Spartanburg, 236 S.C. 553, 115 S.E.2d. 295 (1960), and Lockridge v. Santens of America, Inc., 344 S.C. 511, 544 S.E.2d 842 (Ct. App. 2001); the Clamant failed to demonstrate that he suffered a compensable injury by accident to his heart and/or a compensable cardiac condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 through March 3, 2003.

3. Under § 42-15-60, the Claimant is not entitled to medical care, benefits and/or treatment (past or future) secondary to his alleged work injury of January 19, 2011.

4. Under § 42-9-10, § 42-9-20, § 42-9-260, § 42-9-210, and Regulations 67-501 through 510; the Claimant is not entitled to any temporary disability compensation secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

5. Under § 42-9-10, § 42-9-20 and § 42-9-30, the Claimant did not sustain any compensable disability, permanent loss of use to any body part and/or permanent loss of earning capacity secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

6. Under § 42-1-40, the Claimant's average weekly wage is Seven Hundred Seventy-Five and 11/100 ($775.11) Dollar with a corresponding compensation rate of Five Hundred Sixteen and 77/100 ($516.77) Dollars

7. Under § 42-1-160, § 42-15-60, § 42-9-10, § 42-9-20, § 42-9-30, § 42-9-260, and Regulations 67-501 through 510, the Claimant failed to establish a compensable claim for benefits under the Act; and therefore, the Claimant is not entitled to any benefits of any kind under the Act.

ORDER

IT IS, THEREFORE, HEREBY ORDERED that the Claimant's claim for medical and/or any compensation benefits under the Act as a result of an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003 is hereby denied due to the Claimant's failure to establish the requisite burden of proof to support and prove his allegations.

IT IS FURTHER ORDERED is not entitled to any further medical, monetary and/or compensation benefits of any kind under the Act secondary an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003.

IT IS FURTHER ORDERED that the Claimant's attorney shall tender to the Defendant a payment in the amount of Two Hundred Sixteen and 38/100 ($216.38) Dollars in accordance with stipulation contained hereinabove.

IT IS SO ORDERED.

Within the statutory period, Claimant filed an Application for Review in the case setting forth his reasons, copies of which were furnished to all interested parties, prior to oral argument presented before the Appellate Panel on August 28, 2012. By appeal, Claimant submitted the following eighteen (18) grounds for review:

1. That pursuant to S.C. Code of Laws §42-17-40, the Claimant requests a review of all of the Findings of Fact, the Conclusions of Law, the Order and Award and of all rulings and decisions made by the Commissioner at

the hearing, as contained in the Record or as made at any unrecorded pre-hearing conference, and in any communications concerning the claim, Order, Award and Decision rendered by the Hearing Commissioner in this matter.

2. That the Hearing Commissioner erred as a matter of law in his application of the law under S.C. Code §42-1-160 and the application of the Claimant's burden of proof which is by a preponderance of the evidence and finding that the Claimant as a matter of law did not establish that he had sustained a compensable heart-related condition as a result of injury by accident stemming from the unusual and extraordinary conditions in his employment occurring just prior to and at the time of his first atrial fibrillation that resulted in his continuing and permanent condition thereafter.

3. That the Hearing Commissioner erred as a matter of law by allowing the testimony of Mr. Kirk Adair who was not employed with the State Accident Fund as an auditor or in any capacity during the time that was relevant to whether or not the Claimant's condition arose out of and in the course of his employment and constituted an injury by accident within the meaning of the Act. That testimony was irrelevant and immaterial and prejudicial to the Claimant as it compared totally dissimilar times in the Auditing Department. This would be similar to comparing the stress levels of military personnel stationed in Hawaii on December 7, 1941 to that of military personnel assigned to Hawaii on December 7, 1991.

4. That the Hearing Commissioner erred as a matter of law by allowing the testimony of Mr. Murphy in reference to any reasons for the Claimant's pay raise or interpretation of any of the documents in reference to the conditions in the Auditing Department and during the time the Claimant developed his heart-related condition and as to whether or not the conditions in that Department constituted unusual and extraordinary conditions in the employment.

5. That the Hearing Commissioner erred in making specific Findings of Fact in reference to the testimony of Ms. Holloman and that of the Claimant and citing that testimony without noting. in the Findings of Fact that both Ms. Holloman who was an Auditor in the Auditing Department at the time that the Claimant's heart condition came about and the Claimant's was that the conditions that existed between January 1, 2003 and March 3, 2003 (including but not limited to the fact that the Agency just prior to this time had announced the largest increase in premiums for the account holders that had ever occurred and that the Auditing Department as far as handling all of the functions had gone from three (3) Auditors to one (1) Auditor) wherein based on these facts and all the relevant facts at that time, in their opinions those work conditions for an Auditor in the Auditing Department constituted unusual and extraordinary conditions to the usual and ordinary job of the Auditor in the Auditing Department of the State Accident Fund at this time. There is simply no other evidence as to that condition at that time.

6. That the Hearing Commissioner further erred as a matter of law by not finding that the Claimant sustained an injury by accident due to unusual and extraordinary conditions wherein both the Manager of Administrative Services and the Deputy Director, Ross Gamble, in approving a performance pay raise on April 15, 2003 in reference to the time of the premium increase and the Auditing Department going from three (3) to one (1) Auditor to handle all of the functions of the Auditing Department stated, "you helped to keep these essential functions going throughout a period of transition caused by staff turnover and other extraordinary circumstances." There was also no opinion stated contrary to this and neither Ms. Flateau nor Mr. Ross Gamble were called as witnesses to further explain their opinion and therefore the Commissioner erred by not finding that the Claimant was exposed to unusual and extraordinary conditions where management thought the conditions were extraordinary.

7. That the Hearing Commissioner erred by making Finding of Fact No. 17 which is an error of law under law by finding that, "linking heart disease to work-based on what is unusual and extraordinary is impossible for a doctor to conclude, legally." This is a mis-statement of the law and under the uncontested medical evidence both from the psychologist hired by the Defendants to perform an evaluation who found that Mr. Menie, "appears to have suffered a cardiac arrhythmia from an accumulation of stress on the job"; and the treating cardiologist who found based on a review of the job responsibilities of Mr. Menie that in his, "job responsibilities and work load as set forth above and specifically between December 27, 2002 and March 4, 2003" stated to a reasonable degree of medical certainty was the, "cause of his onset of high blood pressure and the initial atrial fibrillation" and further that it was the, "physical and emotional job stress placed upon him by his job duties and responsibilities that was the cause of this condition." There is no medical evidence to the contrary. Again, it was his, "opinion to a reasonable medical certainty that Mr. Menie's cardiological problems of atrial fibrillation and high blood pressure were caused by the physical and emotional stress arising out of and from his job duties, responsibilities and work load.

8. That it was an error of law as not being based on the evidence and being on the basis of surmise, speculation and innuendo for the Commissioner to make Finding of Fact No. 18 in reference to the pressure that the Claimant was under and that it was not unusual based on the witness testimony. There is absolutely no evidence from any witness that the conditions to which Mr. Menie was exposed was not contrary to the usual and ordinary conditions of employment as an Auditor in the State Accident Fund during the period of time that was alleged to have resulted in his condition and in fact all of the testimony was to the contrary that the conditions were unusual and extraordinary in his employment during that period of time.

9. That it was an error of law for the Hearing Commissioner to making Finding of Fact No. 19 wherein he found that such conditions as labor turnover, illness of co-workers and computer problems are common in almost all work environments and are not unusual. This is a specific error of law and represents a total lack of understanding of the prior case law and our statutory law in reference to unusual and extraordinary conditions. In multiple cases

including the case of Shealy v. Aiken Co., Stokes v. First National, Smith v. NCCI, and others wherein the Court has found all three (3) of these factors to be conditions that can constitute unusual and extraordinary conditions in the employment. This blanket Finding of Fact which is not a Finding based on the evidence and on applicable law is arbitrary, capricious and is evidence that the Commissioner's decision was based upon an abuse of discretion.

10. That the Hearing Commissioner erred as a matter of law by finding Finding of Fact No. 20 which is irrelevant to whether or not the conditions are unusual and extraordinary to which the Claimant was exposed.

11. That the Hearing Commissioner erred as a matter of law by making Finding of Fact No. 21 specifically where there is no evidence that the Claimant, "voluntarily took on the position" and it is further an error of law because the Finding that he was commended or received a pay raise for his work has nothing to do with and is irrelevant and immaterial to the decision of whether or not the Claimant sustained injury by accident arising out of and in the course of his employment due to unusual and extraordinary conditions and also further establishes that the Commissioner's Decision was arbitrary, capricious and characterized by an abuse of discretion.

12. That the Hearing Commissioner erred as a matter of law by making Finding of Fact No. 22 wherein he states that Dr. Hendricks saw the Claimant six (6) times in 2003 and 2004 and did not mention stress. This Finding is irrelevant but more importantly it is contradicted by Dr. Hendricks' testimony and evidence presented that when he first saw Mr. Menie in the hospital following his initial atrial fibrillation on March 3, 2003 he and Mr. Menie specifically discussed at that time that he was under a lot of job stress at work.

13. That the Hearing Commissioner erred as a matter of law both concerning his statement as to what a medical doctor may testify to concerning whether or not conditions are unusual and extraordinary and as to the doctor's opinion wherein the doctor stated that it was his opinion that Mr. Menie's atrial fibrillation and high blood pressure, "resulted from, as Mr. Gambrel put it 'extraordinary' job duties, responsibilities and workload of his job." Any expert may testify as to the ultimate issue in any case as a matter of law under our existing evidence law and the Commissioner's statement to the contrary is an error of law and must be reversed.

14. That the Hearing Commissioner erred as a matter of law in making Conclusion of Law No. 2 wherein such Conclusion of Law is contrary to the established precedents under S.C. Code §42-1-160 as to the establishment of a heart-related condition as being due to unusual and extraordinary conditions.

15. That the Hearing Commissioner erred as a matter of law by not finding the claim compensable where the employer had agreed to accept the claim in principle following the accident when the claim was filed.

16. That the Hearing Commissioner erred as a matter of law in making Conclusion of Law No. 3, 4 and 5 all of which are based upon Conclusion of Law No. 2 that he did not sustain an injury by accident upon which these Conclusions of Law are based.

17. That the Hearing Commissioner erred as a matter of law by making Conclusion of Law No. 7 which is also based upon the decision that the Claimant did not sustain his burden of proof of proving as a matter of law that he had sustained injury by accident as a matter of law under the Act.

18. That the Hearing Commissioner erred as a matter of law by finding that the Claimant had not established that the conditions of employment were unusual and extraordinary where he does not state why each of the issues and conditions as presented to his treating doctor were not unusual and extraordinary.

All proffered testimony has been taken. Such, together with all documentary evidence, has been delivered by oral argument to the individual members of the Full Commission and has been under study and consideration.

In an appellate review, the Appellate Panel shall, pursuant to S.C. Code Ann. §42-17-50 (1985), review the Award, weigh the evidence as was presented to the Hearing Commissioner at the initial Hearing, and, if ground be shown therefore, make its own Findings of Fact and reach its own Conclusions of Law consistent with or inconsistent with those of the Hearing Commissioner. After careful review of the record and consideration of the arguments raised at oral arguments, the Appellate Panel, by a unanimous vote, has determined that all of the Hearing Commissioner's Findings of Fact and Conclusions of Law are correct. However, the Hearing Commissioner's Finding of Fact No. 22 needs to be amended to correct a scrivener's error. With the lone exception of Finding of Fact No. 22, which shall be amended hereinbelow, the Hearing Commissioner's Findings of Fact and Conclusions of Law shall become, and hereby are, the law of the case, and therefore the Hearing Commissioner's Decision and Order is otherwise affirmed in its entirety.

FINDINGS OF FACT

1. All parties to this proceeding are subject to and bound by the terms and provisions of the South Carolina Workers' Compensation Act (hereinafter and hereinbefore "the Act").

2. The Claimant alleges injury to the heart as a result of unusual and extraordinary conditions of employment on March 3, 2003.

3. The Claimant was working as an auditor and claims that from January 1, 2003 to March 3, 2003, he was under stress as a result of the illness of a co-worker and labor turnover. The period was about 25 business days. The Claimant stated the department reorganization required more work.

4. The Claimant did not work excessive overtime, and the evidence shows the Claimant worked no more than 40 hours per week.

5. A witness for the Claimant (Ms. Holman) testified about the team concept in the auditing department as compared with the department concept. She also testified that during the period of time in question (2002/2003) there was a new computer system which had glitches at the outset.

6. The Claimant's witness (Ms. Holman) also testified that when they went to the team concept, they would still help each other so the job would not go undone.

7. The Claimant's witness (Ms. Holman) also testified that workloads always varied from one year to the next.

8. The Claimant's witness testified it could take up to 180 days to complete an audit. The Claimant stated that if the computer system was installed in 1999, then there were still problems with it in 2002.

9. A witness (Mr. Murphy) for the Defendant testified the Claimant worked for about 25 business days alone in the audit department. There was no overtime worked and a trainee had been hired to assist the Claimant.

10. The Defendant's witness (Mr. Murphy) stated that there had been other times when auditors worked in a like position for as long as 8 months.

11. As of the date of Hearing, the Defendant was employing just two auditors, and the Defendant never returned to three auditors.

12. The Defendant's witness (Mr. Murphy) testified that Claimant never asked for help. If he had it was available.

13. The Defendant's witness (Mr. Murphy) was credible.

14. A second witness for the Defendant (Mr. Adair) testified he had handled the job by himself and it was not as difficult as his previous jobs.

15. The Claimant has had numerous health problems some of which are being treated by the VA due to exposure to Agent Orange in Vietnam.

16. After considering all of the evidence, we find Claimant failed to prove his heart condition was a result of unusual and extraordinary conditions of employment.

17. Linking heart disease to work based on what is unusual and extraordinary is impossible for a doctor to conclude, legally.

18. What pressure the Claimant was under during the short period of time in 2003 was short in duration and not unusual based on witness testimony.

19. Labor turnover, illness of co-workers and computer problems are common to almost all work environments and are not unusual.

20. Any pressure the Claimant was under was self-imposed. The Claimant stated his ego would be damaged if he did not keep up. The Claimant did not work overtime.

21. The Claimant voluntarily took on the position, was commended for his work and received a pay increase.

22. The Claimant saw Dr. Hendricks six times in 2003 and 2004 for heart problems and never mentioned stress. None of Dr. Hendricks' notes from that period mention stress.

23. The applicable Compensation Rate is Five Hundred Sixteen and 77/100 ($516.77) Dollars, which is based on an Average Weekly Wage of Seven Hundred Seventy-Five and 11/100 ($775.11) Dollars.

24. The Claimant's claim for any benefits Under the Act is denied.

RULINGS OF LAW

1. Under § 42-1-130, the Claimant was a covered employee and under § 42-1-140, the Employer was a covered Employer at the time in question.

2. Under § 42-1-160, and pursuant to the holdings in Sims v. S.C. State Commission of Forestry, 235 S.C. 1, 109 S.E.2d 701 (1959), West v. City of Spartanburg, 236 S.C. 553, 115 S.E.2d. 295 (1960), and Lockridge v. Santens of America, Inc., 344 S.C. 511, 544 S.E.2d 842 (Ct. App. 2001); the Claimant failed to demonstrate that he suffered a compensable injury by accident to his heart and/or a compensable cardiac condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 through March 3, 2003.

3. Under § 42-15-60, the Claimant is not entitled to medical care, benefits and/or treatment (past or future) secondary to his alleged work injury of January 19, 2011.

4. Under § 42-9-10, § 42-9-20, § 42-9-260, § 42-9-210, and Regulations 67-501 through 510; the Claimant is not entitled to any temporary disability compensation secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

5. Under § 42-9-10, § 42-9-20 and § 42-9-30, the Claimant did not sustain any compensable disability, permanent loss of use to any body part and/or permanent loss of earning capacity secondary to his alleged heart injury and/or hear condition secondary to allegedly unusual and extraordinary conditions of employment from January 1, 2003 to March 3, 2003.

6. Under § 42-1-40, the Claimant's average weekly wage is Seven Hundred Seventy-Five and 11/100 ($775.11) Dollar with a corresponding compensation rate of Five Hundred Sixteen and 77/100 ($516.77) Dollars

7. Under § 42-1-160, § 42-15-60, § 42-9-10, § 42-9-20, § 42-9-30, § 42-9-260, and Regulations 67-501 through 510, the Claimant failed to establish a compensable claim for benefits under the Act; and therefore, the Claimant is not entitled to any benefits of any kind under the Act.

ORDER

IT IS, THEREFORE, HEREBY ORDERED that the Claimant's claim for

medical and/or any compensation benefits under the Act as a result of an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003 is hereby denied due to the Claimant's failure to establish the requisite burden of proof to support and prove his allegations.

IT IS FURTHER ORDERED is not entitled to any further medical, monetary and/or compensation benefits of any kind under the Act secondary an alleged injury to heart arising out of unusual and extraordinary conditions of his employment the Claimant alleges to have been subjected to in the course of his employment from January 1, 2003 through March 3, 2003.

IT IS FURTHER ORDERED that the Claimant's attorney shall tender to the Defendant a payment in the amount of Two Hundred Sixteen and 38/100 ($216.38) Dollars in accordance with stipulation contained hereinabove.

IT IS SO ORDERED.

SCRCP Form 4C (10/2011)

SCANNED

STATE OF SOUTH CAROLINA COUNTY OF RICHLAND ALVIN L. MENIE, Employee/Appellant, vs. STATE ACCIDENT FUND, Employer, and SELF-INSURED, Carrier, Defendants.	)	IN THE COURT OF COMMON PLEAS FIFTH JUDICIAL CIRCUIT C/A No.: 2012-CP-40-08296 **ORDER**

RICHLAND COUNTY
FILED
2014 APR 15 AM 9:21
JEANETTE W. McBRIDE
C.C.P. & G.S.

This matter was originally set before me on April 4, 2014, for an appeal hearing on the appeal filed from the Order of the South Carolina Workers' Compensation Commission in this matter. Prior to the date for hearing, the Appellant's Counsel filed a Motion for a Continuance and to Compel the production of the Commission Record. In fairness to all parties including the South Carolina Workers' Compensation Commission, this is not really a dispute over the Record being provided but was caused by a change in policy at the Commission in reference to providing the original Record to the Circuit Courts for hearings. This policy change was in large measure caused by problems the Commission had had with

SCANNED

having Records forwarded to the Court being returned to the Commission after the appeals were heard.

In reference to this case, after the Motion was filed and it was realized there was a problem the parties including the Commission exchanged correspondence and communication via email with the Court and all the parties are in agreement and are willing to work together to provide the Record so that this matter may be heard.

On the date of the hearing, Mr. Haselden representing the Defendants, waived appearance and Mr. McDaniel appeared to address this issue as Counsel for the Parties are of the same opinion. Mr. McDaniel and I spoke with the Judicial Director of the Commission and the Commission is willing to provide the Record or do whatever the Court requests so that the Record may be obtained so that this matter may be set for hearing.

Both before, during and after our conversation with the Judicial Director, Mr. McDaniel stated that he would be willing to get with Defense Counsel and see if they could agree on the Records needed, which is what he had originally tried to do but was not able to accomplish due to Defense Counsel's misunderstanding in that Defense Counsel thought the Record would simply be sent by the Commission in accordance with the Circuit Court Rules. At this point, to obtain anything less than the entire original Record of the Commission would entail Mr. McDaniel

getting with Mr. Haselden, agreeing on what records would be copied and then either obtaining certified copies from the Commission or Counsel entering into an agreement that this is the Record to be presented. This process would obviously take a tremendous amount of time in reference to both Counsel of Record and the Commission.

At the conclusion of our conversation, I asked Mr. McDaniel what would be the easiest, simplest and fastest way to obtain a Record for the Court so that this matter may be set for hearing as fast as possible. Mr. McDaniel again advised the Court that he would be willing to contact Mr. Haselden and try to agree upon a Record and to go to the Commission but the easiest, fastest and quickest way to obtain a Record for the Court would be for the Commission to simply forward the original Record to the Court for hearing pursuant to the Circuit Court Rule.

In addition to this information, I have reviewed the documentation from the Commission and I understand the Commission's position and concern over their Record. However, the focus of the Court at this point is to obtain the Record of the Commission as easily, as quickly and with as little effort as if possible on behalf of all the parties so the Court may proceed as soon as possible with hearing the appeal. Based on all this, I am ordering that the Commission produce the original Record to the Court for purposes of the appeal in this matter within seven (7)

days of the date of this Order. I am also ordering that Counsel for both parties are to advise the Commission as soon as they are advised that this matter is set for hearing on the appeal and within seven (7) days of the date that a decision is rendered on the appeal to notify the Commission that a decision has been rendered. Counsel are also to contact the Clerk of Court and request that the Record be returned to the Commission, and to follow up with the Circuit Court to ensure that the Record is properly returned to the Commission.

THEREFORE IT IS ORDERED that the South Carolina Workers' Compensation Commission be and hereby is ordered to forward the Record before the Commission to the Clerk of the Circuit Court within seven (7) days of the date of the receipt of this Order.

IT IS FURTHER ORDERED that Counsel for the Parties will notify the Commission upon this matter being set for hearing, when this matter is actually heard and will again notify the Commission upon an Order being filed concerning the appeal in this matter. Counsel are further ordered to follow up with the Clerk of Court within seven (7) days of the date of the filing of the Order to ensure that the Commission's Record is returned to the Commission with a copy of all communication and correspondence with the Clerk's Office to be provided to the Commission. The Commission is requested to notify the Court upon receipt of the Record.

IT IS FURTHER ORDERED that upon receipt of the Record by the Clerk of Court this matter is to be reset for a non-jury term of Court no less than thirty (30) days after the receipt of the Record by the Clerk's office. The Commission shall notify the parties of the submission of the Record to the Court and the Clerk's office shall confirm receipt to the parties.

AND IT IS SO ORDERED.

SCRCP Form 4C (10/2011)

SCANNED

STATE OF SOUTH CAROLINA COUNTY OF RICHLAND	IN THE COURT OF COMMON PLEAS FIFTH JUDICIAL CIRCUIT
Alvin L. Menie, Appellant, vs. State Accident Fund, Respondent.	CASE NO. 2012-CP-40-08296 **ORDER**

RICHLAND COUNTY
FILED
2015 DEC -2 AM 10:43
JEANETTE W. McBRIDE
C.C.P. & G.S.

This matter came before the Court on June 20, 2014, for a hearing on Appellant Alvin L. Menie's ("Menie") appeal from an Order by the South Carolina Workers' Compensation Commission ("Commission") dated November 29, 2012. Present at the hearing were Preston F. McDaniel, Esquire, counsel for Appellant, and Andrew E. Haselden, Esquire, counsel for Respondent. After considering the law, the briefs filed by the parties, the arguments of counsel, and all matters submitted, the decision of the Commission is **AFFIRMED.**

FACTUAL BACKGROUND

Menie worked in the Auditing Department of the State Accident Fund ("SAF") from 1984 to 2009. SAF is responsible for providing insurance for local, county, state and other governmental agencies within South Carolina that provide Workers' Compensation coverage. In the Fall of 2002, SAF had 3 auditors in the auditing department: Menie, Ms. Carla Johnson ("Johnson"), and Ms. Shaun Holmon ("Holmon"). In December of 2002, SAF advised all of its premium accounts that they would incur a rate increase of an average 24.7% effective January 1, 2003. The rate increase generated many calls from different agencies seeking to determine whether and why their respective rates would be increasing.

SAF, moreover, was in the process of implementing a new computer system using its own unique classification codes instead of utilizing the National Council of Compensation Insurers (NCCI) classification codes to classify jobs into categories. The system had a lot of issues, and it took some time for the system to become fully functional. Specifically, the system failures caused the auditors to have to resubmit items numerous times.

By the last week in December 2002, Johnson was absent on medical leave and Holmon no longer was employed with SAF. Menie, thus, was left by himself to complete all of the

SCANNED

auditing work for SAF from January 1, 2003, to February 10, 2003. During this 25 business day period, Menie worked by himself and answered questions from all agencies and reviewed/addressed all the correspondence concerning the rate increase. Moreover, instead of having to perform 33 audits in January, Menie had to perform 99 audits. On March 3, 2003, while at work, Menie suffered a cardiac event, atrial fibrillation, and was transported to Lexington Medical Center.

PROCEDURAL BACKGROUND

A hearing was conducted before Commissioner G. Bryan Lyndon on January 30, 2012. During the hearing, Menie contended that he sustained a work-induced onset of atrial fibrillation on March 3, 2003, and that the condition was compensable under S.C. Code Ann. § 42-1-160 of the South Carolina Workers' Compensation Act and the common law concerning cardiac conditions induced by unusual and extraordinary work conditions. Menie sought payment of all past and future causally-related medical expenses.

SAF argued that Menie did not experience unusual and extraordinary work conditions from January 1, 2003, to March 3, 2003. Thus, SAF argued that Menie's claim was not compensable. SAF explained that Menie's personnel records reflected that Menie never worked more than 40 hours in a workweek during the subject period. SAF, moreover, argued that Menie previously claimed his cardiac condition was related to his military service during the Vietnam War in his application seeking Veterans Disability Benefits from the United States Department of Veteran Affairs ("VA").

After considering the testimony of all the witnesses, observing the witnesses during their testimony, reviewing the APA Submissions, and considering the applicable law, Commissioner Lyndon issued a Decision and Order, dated April 11, 2012, ruling that Menie failed to prove that his heart condition was the result of unusual and extraordinary conditions of employment. Accordingly, Commissioner Lyndon determined that Menie was not entitled to any Workers' Compensation benefits.

Menie appealed Commissioner Lyndon's Order to the Full Commission, and the Commission heard oral arguments on August 28, 2012. On November 29, 2012, the Commission issued its Order unanimously affirming Commissioner Lyndon's determination that Menie's claim was not compensable. Menie appealed the Commission's Order to the Court.

SCANNED

LEGAL STANDARD

The South Carolina Administrative Procedures Act "establishes the standard for judicial review of decisions of the Commission." *Bone v. U.S. Food Service*, 404 S.C. 67, 73, 744 S.E.2d 552, 556 (2013). "A reviewing court may reverse or modify a decision of [the Commission] if the findings, inferences, conclusions or decisions of [the Commission] are clearly erroneous in view of the reliable, probative and substantial evidence on the whole record." *Id.* The Court "may not substitute its judgment for that of the [Commission] as to the weight of the evidence on questions of fact," and may only reverse the Commission if its decision is controlled by an error of law. *Frame v. Resort Services, Inc.*, 357 S.C. 520, 527, 593 S.E.2d 491, 495 (Ct. App. 2004). Thus, the Court's review is limited to determining whether the Commission's decision "is unsupported by substantial evidence or is controlled by some error of law." *Gibson v. Spartanburg Sch. Dist. No. 3*, 338 S.C. 510, 517, 526 S.E.2d 725, 728–729 (Ct. App. 2000). "Substantial evidence is not a mere scintilla of evidence, nor the evidence viewed blindly from one side of the case, but is evidence which, considering the record as a whole, would allow reasonable minds to reach the conclusion the administrative agency reached in order to justify its action." *Hargrove v. Titan Textile Co.*, 360 S.C. 276, 289, 599 S.E.2d 604, 611 (Ct. App. 2004). "The possibility of drawing two inconsistent conclusions from the evidence does not prevent the Commission's finding from being supported by substantial evidence." *Sharpe v. Case Produce, Inc.*, 336 S.C. 154, 160, 519 S.E.2d 102, 105 (1999). Determinations concerning "witness credibility and the weight to be accorded evidence [are] reserved to the [Commission]." *Shealy v. Aiken Cnty.*, 341 S.C. 448, 455, 535 S.E.2d 438, 442 (2000).

DISCUSSION

On appeal, Menie contends that because of his increased workload during the subject period, he suffered an acute onset of atrial fibrillation and should receive workers' compensation benefits. Menie contends that: (a) the Commission's decision was based on surmise, speculation and innuendo; (b) the Commission erred in allowing and relying on Kirk Adair's testimony; and (c) the Commission erred by making a general finding that "labor turnover, illness of co-workers and computer problems are common to almost all work environments and are not unusual." The Court will address each of these arguments in turn.

SCANNED

I. Surmise, Speculation and Innuendo

Menie argues that there is no substantial evidence in the record to support the Commission's decision, and thus, its decision is based on surmise, speculation and innuendo. "A claimant may recover workers' compensation benefits if he sustains an 'injury by accident arising out of and in the course of [his] employment.'" *Jordan v. Kelly Co., Inc.*, 381 S.C. 483, 486, 674 S.E.2d 166, 168 (2009) (quoting S.C. Code Ann. § 42-1-160 (2006)). "A heart attack suffered by an employee constitutes a compensable accident within the meaning of the Workers' Compensation Act if it is induced by unexpected strain or overexertion in the performance of the duties of [a claimant's] employment or by unusual and extraordinary conditions in employment." *Hoxit v. Michelin Tire Corp.*, 304 S.C. 461, 464, 405 S.E.2d 407, 409 (1991); *Brown v. La France Industries, a Div. of Riegel Textile Corp.*, 286 S.C. 319, 330, 333 S.E.2d 348, 355 (Ct. App. 1985). The Commission found that Menie failed to prove his working conditions were unusual and extraordinary. South Carolina courts have, for many years, grappled with what constitutes unusual and extraordinary working conditions.

In *Kearse v. S.C. Wildlife Res. Dep't*, 236 S.C. 540, 542, 115 S.E.2d 183, 184 (1960), the claimant, Kearse, suffered a cerebral thrombosis arising out of his employment. Kearse was employed as a game warden with the South Carolina Wildlife Resources Department. *Id.* For a period of two or three weeks prior to his stroke, Kearse, along with other game wardens, met each other each morning before daylight and did not leave until dark. *Id.* at 542, 115 S.E.2d at 184–85. Kearse worked between sixteen and eighteen hours a day within this period. *Id.* at 542, 115 S.E.2d at 185. Several days before his stroke, Kearse along with other game wardens, "dragged [a] boat over cypress knees, logs, mud and water to the main stream, a distance of about 50 yards." *Id.* Kearse paddled the boat up the stream about 300 yards while another game warden held a flashlight. *Id.* at 542–43, 115 S.E.2d at 185. Both game wardens then dragged the boat for about 25 or 30 feet. *Id.* at 543, 115 S.E.2d at 185. A few days after dragging the boat, Kearse had to push an automobile a "considerable distance over rough terrain to get it started." *Id.* The Workers' Commission awarded Kearse permanent and total disability. The Supreme Court affirmed the Commission finding that:

> [W]hile the evidence shows that the type of activity in which [Kearse] was engaged was common to his position as game warden, it further abundantly shows that the hours in which he was so employed were unusually long, the work environment was unusually difficult, and that there were several

SCANNED

> incidents in which [Kearse], because of unusual circumstances, greatly over-exerted himself in the performance of his duties.

Id. at 546–47, 115 S.E.2d at 187.

In *McWhorter v. S.C. Dep't of Ins.*, 252 S.C. 90, 92, 165 S.E.2d 365, 365 (1969), the claimant, McWhorter, suffered a heart attack and died while working with the South Carolina Department of Insurance. McWhorter's job duties typically required him to be at work from 9 am to 5 pm, with an hour lunch break and a morning and afternoon coffee break. *Id.* at 92, 165 S.E.2d at 365–66. In the ten days preceding his heart attack, however, McWhorter worked more than 121 hours and drove over 1500 miles in preparation for an upcoming trial. *Id.* at 92, 165 S.E.2d at 366. McWhorter, moreover, worked 23 hours in the weekend (time he usually had off) immediately before the trial. *Id.* at 93, 165 S.E.2d at 366. On the Monday trial commenced, McWhorter awoke about 3:30 that morning and picked up a witness. *Id.* After arriving in Greenville, McWhorter participated in a conference with other people involved in the case from about 7 a.m. to 9 a.m. *Id.* McWhorter then assisted during the trial until about 12:35 p.m. *Id.* He then "carr[ied] voluminous files and records to the [prosecutor's office] in the [c]ourt [h]ouse, then walked down three flight of stairs in the [c]ourt [h]ouse, and shortly after emerging from the building he suffered a heart attack and died." *Id.* The Workers' Commission deemed McWhorter's claim compensable. *Id.* at 98, 165 S.E.2d at 368. The Supreme Court affirmed finding that:

> [McWhorter] was engaged in an unusual investigation, under extraordinary conditions of employment, with unusually long hours, great mental stress and strain, emotional involvement, lack of sleep, time pressure, physical exertion, and other extraordinary conditions of employment at the time of his attack.

Id. at 97, 165 S.E.2d at 368.

In *Cline v. Nosredna Corp., Inc.*, 291 S.C. 75, 78, 352 S.E.2d 291, 293 (Ct. App. 1986), the claimant, Mr. Cline, suffered a heart attack arising out of his employment and was diagnosed with atrial fibrillation. In 1977, Cline worked as a food service manager for a restaurant. *Id.* at 77, 352 S.E.2d at 292. In 1982, Cline was made food service manager of an additional store. *Id.* at 77, 352 S.E.2d at 293. Cline had to manage the day-time operations of both stores and "supervised the cooks, ordered, inspected and inventoried food, and shopped competitively for food and utensils." *Id.* at 77, 352 S.E.2d at 292. Additionally, "[t]he restaurants were one hundred fifty feet apart, requiring Cline to continuously traverse the distance between them each

SCANNED

day." *Id.* at 77–78, 352 S.E.2d at 293. Three months after opening the second store, Cline suffered a heart attack. *Id.* at 78, 352 S.E.2d at 293. The Supreme Court affirmed the Commission's finding that Cline's preexisting condition of congestive heart failure was "aggravated and accelerated by [Cline's] unusual and extraordinary employment conditions." *Id.* at 78, 352 S.E.2d at 293.

In *Watt v. Piedmont Automotive*, 384 S.C. 203, 206, 681 S.E.2d 615, 617 (Ct. App. 2009), the claimant, Roger Watt ("Watt"), suffered congestive heart failure and unstable angina pectoris allegedly because of unusual and extraordinary work conditions. In 1991, Watt began working for a car dealership as a technician and team leader. *Id.* at 205, 681 S.E.2d at 616. In 1995, Watt was promoted to service director of both the car dealership and an additional dealership. *Id.* Thereafter, he was removed as service director of the additional dealership but retained his position as service manager of the original dealership. *Id.* Watt contended that the dealership's "implementation of a 'Net Profit' program [the year before he was terminated] produced an extraordinary working condition causing him stress that aggravated his cardiovascular disease and caused the blockage of his coronary arteries." *Id.* at 206, 681 S.E.2d at 617. The new system, according to Watt, angered customers and generated a lot of complaints. *Id.* at 210, 681 S.E.2d at 619. One of Watt's co-employees explained that the implementation of the new system doubled Watt's work, and that Watt "always appeared tired and worked late every night." *Id.* The Commission denied Watt's workers' compensation claim finding that Watt "failed to establish the stressful employment conditions causing the injury were extraordinary and unusual in comparison to the normal conditions of employment." *Id.* at 206, 681 S.E.2d at 616. The circuit court reversed the Commission. *Id.* at 207, 681 S.E.2d at 617.

On appeal, the Court of Appeals reversed the circuit court's determination that Watt's claim was not compensable. *Id.* at 212, 681 S.E.2d at 620. The Court of Appeals acknowledged that there was conflicting evidence concerning whether Watt was working under unusual and extraordinary working conditions; however, "'it [was] not the task of an appellate court to weigh the evidence as found by [the Commission].'" *Id.* at 211, 681 S.E.2d at 619 (quoting *Jordan v. Kelly Co.*, 381 S.C. 483, 487, 674 S.E.2d 166, 169 (2009)). The Court of Appeals found substantial evidence existed in the record to show that Watt "was accustomed to working 55 and 60 hour weeks . . . [and] that the implementation of [the new system] did not result in unusual or

SCANNED

extraordinary conditions of employment." *Id.* at 211, 681 S.E.2d at 619. Therefore, "the circuit court erred in reversing the order of the [Commission]." *Id.*

Of all the cases discussed above, the facts of *Watt* most closely parallel the facts in the instant matter. Just as in *Watt*, where Watt alleged that his employer's implementation of a new program, in part, produced an extraordinary working condition, here, Menie claims that SAF's use of its own identification codes, in part, produced an unusual and extraordinary condition. Moreover, just as in *Watt*, where Watt alleged that he had to work longer hours in response to the new system, here, Menie contends that he had to work longer hours. Furthermore, Watt claimed that his employer's new system generated a lot of complaints that he had to respond to; Menie has claimed the same. Lastly, Watt argued that his work was doubled; Menie argues his work tripled.

Accordingly, just as in *Watt*, the Commission was in a better position to weigh the evidence presented in the instant matter. The Commission acknowledged that Menie worked as the lone premium auditor for SAF from January 3, 2003, to February 10, 2003. The Commission, moreover, acknowledged that SAF informed its insureds of the average 24.7% increase in premiums immediately before that time period. Lastly, it was undisputed that Menie suffered atrial fibrillation on March 3, 2003. The Commission, however, after reviewing all of the evidence, found that Menie failed to prove that he suffered atrial fibrillation because of unusual and extraordinary work conditions.

Menie did not work excessive overtime and never worked more than 40 hours a week. SAF presented testimony from two witnesses: Gerald Murphy ("Murphy") and Kirk Adair ("Adair"). Murphy has been employed by SAF since March 1995 and was, at the time of the hearing, SAF's Manager of Administrative Services. Murphy testified that SAF utilized a program known as "Locator" to track, monitor and compile employee attendance. Murphy testified he used the program to compare and contrast Menie's work hours in January and February of 2002 with Menie's work hours in January and February of 2003. The program's data indicated that Menie worked an average of 16 extra minutes per day in January and February of 2003 than he had during those same months in 2002. Murphy also testified that there had been other instances when auditors worked in a similar position as Menie for as long as eight months.

SCANNED

Adair, who was employed by SAF as a premium auditor at the time of the hearing, testified that he came to SAF after working in the private sector as a premium auditor. Adair testified that he worked along with one additional premium auditor, and they were able to perform all of SAF's premium audits. Menie worked as the sole auditor from on, or about, January 1, 2003, to February 10, 2003. On February 10, 2003, Johnson returned from medical leave. Moreover, on March 3, 2003, SAF hired another premium auditor, Warren Farray. Menie took about two weeks off from work because of his cardiac event. Thus, within a few weeks of Menie's event, SAF was again operating with three premium auditors. Menie continued to perform his job without issues for over six years until his retirement in 2009. SAF never returned to three premium auditors following Menie's retirement in 2009.

Furthermore, Menie, via his APA submissions, submitted an opinion from Dr. Hendricks, his treating physician, explaining that the conditions Menie experienced at work caused his atrial fibrillation. Dr. Hendricks' opinion was based upon a presentation of what Menie allegedly was experiencing during the subject time. Menie provided Dr. Hendricks the conditions he was facing at work during the subject time, and based upon Menie's recitation of his working conditions, Dr. Hendricks' determined that Menie's working conditions caused him to suffer from atrial fibrillation. Specifically, Menie asked Dr. Hendricks to respond to about 10 pages of questions. Dr. Hendricks was asked to "provide answers and opinions to the . . . questions concerning Mr. Menie and his heart condition." Menie's APA Submissions at 3. There were several questions including whether Menie had a history of cardiac problems, the effect on Menie's health by him having to answer all correspondence concerning specific issues, the effect on Menie by him having to work longer hours, working through breaks and lunch, and ultimately, whether Menie's atrial fibrillation was caused by the physical and emotional stress arising out of his work duties. Following the event, however, Menie saw Dr. Hendricks six times in 2003 and 2004 for heart problems and never mentioned stress. Nonetheless, Dr. Hendricks concluded that "Menie's cardiological problems of atrial fibrillation and high blood pressure were caused by the physical and emotional stress arising out of and from [Menie's] job duties, responsibilities and work load." Menie's APA Submissions 6.

Menie's medical records and Dr. Hendricks' deposition testimony were reviewed by Dr. Michael Zile, a cardiology professor at MUSC. Dr. Zile's professional opinion was that Menie's working conditions did not contribute to Menie's development of atrial fibrillation. Dr. Zile

SCANNED

noted, specifically, that "to a reasonable degree of medical certainty . . . [Menie's] atrial fibrillation was caused by pre-existing and underlying cardiovascular disease processes including but not limited to morbid obesity, sleep apnea, hypertension, sick sinus node syndrome, and diabetes." SAF's APA Submissions 20. Menie, thus, had numerous health problems some of which were being treated by the VA due to exposure to Agent Orange while serving in Vietnam. The Court recognizes that there was conflicting medical evidence; "[w]hen conflicting medical evidence is presented, [the Court] must not substitute its judgment for that of the fact finder, which in this case is the [Commission]." *Brunson v. American Koyo Bearings*, 395 S.C. 450, 458, 718 S.E.2d 755, 759–690 (Ct. App. 2011).

In light of the substantial evidence in the record, the Commission's decision was not based upon surmise, speculation, and innuendo. Accordingly, the Commission properly determined that Menie's atrial fibrillation was not compensable by Workers' Compensation.

II. Adair Testimony

Menie argues that the Commission erred as a matter of law by admitting and relying on Adair's testimony. Adair started working with SAF in 2010. Adair provided testimony concerning his prior experience as a premium auditor, working conditions of his prior places of employment compared to SAF working conditions, and his working conditions at SAF during a two-month time period when he worked by himself. Menie claims that there was a stark temporal distinction between when Adair worked at SAF and when Menie worked at SAF. Menie suffered from his atrial fibrillation when he was working at SAF in 2003; Adair, however, provided testimony regarding the position of an auditor between 2010 and 2012. According to Menie, "there is no question that [Commissioner Lyndon] relied on [Adair's] testimony . . . that he[:] 'had handled the job by himself and it was not as difficult as his previous jobs.'" Appellant's Mem. Law 32.

Menie contends such evidence was irrelevant and immaterial. According to Menie, the conditions of employment between 2010 and 2012 were not relevant or material to the conditions of employment Menie experienced between January 1, 2003 and March 3, 2003. Thus, Menie claims the Commission erred as a matter of law by relying on it to make its decision.

Determinations regarding the relevancy and materiality of evidence are left within the sound discretion of the trial court, here the Commission. *See Bankers Trust of S.C. v. Bruce*, 283 S.C. 408, 416–17, 323 S.E.2d 523, 529 (Ct. App. 1984) ("The determination of the relevancy of

SCANNED

evidence is largely within the discretion of the trial judge."). Such determination will not be disturbed absent an abuse of discretion. *Kennedy v. Griffin*, 358 S.C. 122, 127–28, 595 S.E.2d 248, 250 (Ct. App. 2004); *see also Gadson v. Mikasa Corp.*, 368 S.C. 214, 228, 628 S.E.2d 262, 269–70 (Ct. App. 2006) (where the Court of Appeals applied the abuse of discretion standard to the Commission's admission of expert testimony). Moreover, "[t]he admission or exclusion of evidence of prior or subsequent existence as inferring existence at a particular time is within the trial court's discretion." *Henderson v. St. Francis Community Hosp.*, 295 S.C. 441, 447, 369 S.E.2d 652, 656 (Ct. App. 1988), *rev'd on other grounds*, *Henderson v. St. Francis Community Hosp.*, 303 S.C. 177, 399 S.E.2d 767 (1990). The Commission possessed the discretion to determine whether Adair's testimony concerning SAF working conditions between 2010 and 2012 were relevant to SAF working conditions in 2003. Even if Adair's testimony was not relevant and it was excluded, there is substantial evidence in the record to support the decision of the Commission. Accordingly, the Commission did not commit an error of law in admitting Adair's testimony.

III. Labor Turnover, Co-worker Illness, and Computer Problems

Menie argues that the Commission erred in finding that labor turnover, illness of co-workers, and computer problems are common and not unusual. More specifically, Menie alleges that "[t]his Finding of Fact is totally and absolutely contrary to law and requires reversal as it indicates that the Commission failed" to apply South Carolina law to the case. Appellant's Mem. Law 34. Menie cites *Stokes v. First Nat'l Bank*, 306 S.C. 46, 410 S.E.2d 248 (1991), in support of his assertion that labor turnover, co-worker illness, and computer problems constitutes unusual and extraordinary conditions.

In *Stokes*, "[a]s a result of merger activity and the resignation on one of [Stokes'] managers . . . Stokes' work hours increased from approximately 45 hours per week to 60 hours per week" and then ultimately workdays of 16 to 18 hours. *Id.* at 47, 410 S.E.2d at 249. Since Stokes' work hours were increased due to the resignation of one of his managers, *Stokes* arguably involved labor turnover. The *Stokes* case, however, did not involve co-worker illness and computer problems. The Court may reverse the Commission's decision when it is affected by an error of law. *Corbin v. Kohler Co.*, 351 S.C. 613, 617, 571 S.E.2d 92, 95 (Ct. App. 2002). Labor turnover, co-worker illness, and computer problems, however, are common in almost all sectors of employer, and thus, do not in and of themselves, constitute unusual or extraordinary

SCANNED

working conditions. *See, e.g., Hoxit v. Michelin Tire Corp.*, 304 S.C. 461, 464, 405 S.E.2d 407, 409 (1991) (where the Supreme Court affirmed the Commission's denial of a claimant's workers' compensation claim after he suffered cardiac arrhythmia that was, in part, allegedly caused by stress related to computer problems). Accordingly, the Commission did not commit an error of law.

ORDER

For the reasons stated above, it is therefore **ORDERED** that the decision of the South Carolina Workers' Commission is **AFFIRMED.**

AND IT IS SO ORDERED.

SCRCP Form 4C (10/2011) SCANNED

STATE OF SOUTH CAROLINA COUNTY OF RICHLAND	)	IN THE COURT OF COMMON PLEAS FIFTH JUDICIAL CIRCUIT
Alvin L. Menie, Appellant, vs. State Accident Fund, Respondent.	)	CASE NO. 2012-CP-40-08296 **ORDER**

RICHLAND COUNTY
FILED
2016 APR 11 PM 2:17
JEANETTE W. WALTERS
C.C.P. & G.S.

This matter is before the Court on Appellant Alvin L. Menie's ("Menie") Motion for a New Trial pursuant to Rule 59(a), SCRCP, to Alter or Amend Judgment pursuant to Rule 59(e), SCRCP, and to Vacate and Remand this matter pursuant to Rule 60(b), SCRCP. This matter came before the Court on June 20, 2014, for a hearing on an appeal from an Order by the South Carolina Workers' Compensation Commission ("Commission") dated November 29, 2012. On November 4, 2015, the Court affirmed the Commission's Order. Appellant filed this Motion on December 7, 2015.[1] After considering the law, the briefs filed by the parties, the arguments of counsel, and all matters submitted, Appellant's Motion is **DENIED**.

In Menie's Memorandum in Support of his Rule 59(a)&(e), and Rule 60(b) motion, Menie contends that the evidence in the record "on the element as to whether [Menie] was exposed to unusual and extraordinary conditions in the employment is uncontradicted and undisputed." Appellant's Memo. at 2. Appellant, thus, argues that the Court, in its Order affirming the Commission, "failed to specifically apply the decisions of the SC Supreme Court that where the evidence is undisputed and there is no substantial evidence in the Record to support the decisions in this case . . . this Court is required by those decisions to reverse the [Commission]." Appellant's Memo. at 4. Menie, however, fails to acknowledge that SAF did provide contradictory evidence concerning whether Applicant faced unusual and extraordinary working conditions.

Menie argues that he, one of Menie's co-workers, and Menie's supervisor all provided information in the record that Menie was facing unusual and extraordinary circumstances at the

[1] In an Order dated December 28, 2015, the Court originally denied this Motion. On January 29, 2016, the Court, however, vacated that Order.

SCANNED

time he suffered from atrial fibrillation. SAF, however, according to Appellant, provided no evidence that Menie did not face unusual and extraordinary circumstances. The Court disagrees. Gerald Murphy ("Murphy") who was, at the time of the hearing, SAF's Manager of Administrative Services, testified that Menie only worked an average of 16 extra minutes per day in January and February 2003 than he did during those same months in 2002. According to Murphy, Menie worked alone for 25 days only and did not work any overtime during that period. Murphy also testified that there had been other instances when auditors worked in a similar position as Menie for as long as eight months, without issue. Murphy, moreover, testified that Menie was not required to complete all of the 600 audits within the subject period.[2] Murphy explained that, in fact, January typically is a month where the total number of audits performed is very low due to the lack of requisite information needed from the insureds to perform the respective audits. Menie, moreover, testified that he had already received some of the necessary information from the policyholders or was able to conduct some of the respective audits.[3] Furthermore, Murphy testified that by January 10, 2003, 318 out of 522 accounts had paid their premium, which included the 24.7% increase. Moreover, Carla Johnson ("Johnson"), an employee with SAF, returned from medical leave on February 10, 2003, and began working on her workload of approximately 200 audits. Additionally, Shaun Holmon ("Holmon"), a SAF auditor who left in 2002, testified there had been previous double-digit premium increases, that other SAF employees could answer phone calls, and that auditors had up to 180 days to perform a premium audit following the close of a policy period.

In light of the evidence provided by Murphy, Johnson, and Holmon, SAF presented evidence that Menie did not face unusual and extraordinary conditions. Thus, there is substantial evidence in the record to support the Commission's finding. Even if the Commission incorrectly found that Menie did not face unusual and extraordinary working conditions, Menie failed to prove, to the Commission, that Menie's alleged unusual and extraordinary conditions caused his atrial fibrillation.

"In order for [a workers' compensation claimant] to recover workers' compensation benefits, he must prove *both*: (1) that he was exposed to unusual and extraordinary conditions in

---

[2] In fact, Menie testified that he was required only to complete 100 audits by the end of January.
[3] *See, e.g.*, Commission Hearing Transcript of Record at 105:3–8, wherein Menie stated that "some people don't have to wait until they get their W-3s. . . . Others have theirs ready and available that you could do audits on prior to February the 1st."

his employment; and (2) that these unusual and extraordinary conditions were the proximate cause of his [heart condition]." *Shealy v. Aiken Cnty.*, 341 S.C. 448, 459, 535 S.E.2d 438, 444 (2000) (emphasis added). "Undoubtedly, the record must evince a causal connection between any extreme exertion or extraordinary or unusual conditions of employment and a claimant's heart-related injury or death." *South Carolina Second Injury Fund v. Liberty Mut. Ins. Co.*, 353 S.C. 117, 126, 576 S.E.2d 199, 204 (Ct. App. 2003). "Whether there is any causal connection between employment and an injury is a question of fact for the Commission." *Sharpe v. Case Produce, Inc.*, 336 S.C. 154, 159, 519 S.E.2d 102, 105 (1999).

The Commission found that the Appellant "failed to prove his heart condition was a result of unusual and extraordinary conditions of employment." Appellate Panel Decision and Order at 3. Menie, via his APA submissions, submitted an opinion from Dr. Richard Hendricks ("Hendricks") his treating physician, explaining that the conditions Menie experienced at work caused his atrial fibrillation. Hendricks' opinion, however, was based on hypotheticals presented by Menie—hypotheticals that were not wholly supported by the facts in evidence. Menie, moreover, did not even mention stress related to his job to Hendricks until approximately a year after developing his condition as reflected in the medical records. Dr. Michael Zile ("Zile"), SAF's medical expert, reviewed Menie's medical records and Hendrick's deposition testimony and noted that "to a reasonable degree of medical certainty . . . [Menie's] atrial fibrillation was caused by pre-existing and underlying cardiovascular disease processes including but not limited to morbid obesity, sleep apnea, hypertension, sick sinus node syndrome, and diabetes." SAF's APA Submissions 20. At the time of onset of the atrial fibrillation, the medical records reveal that Menie had several health problems. Additionally Menie later sought treatment for several health issues by the VA due to exposure to Agent Orange while serving in Vietnam. Accordingly, even if the Commission improperly found that Menie did not face unusual and extraordinary working conditions, Menie still failed to prove that his working conditions caused his heart condition.

Appellant also argues that the Commission committed an error of law by admitting and relying on Kirk Adair's ("Adair") testimony. Adair, another auditor with SAF, testified that he started working with SAF in 2010 after working in the private sector. Adair provided testimony concerning his prior experience as an auditor, working conditions of his prior places of employment compared to SAF working conditions, and his working conditions at SAF during a

ard #3

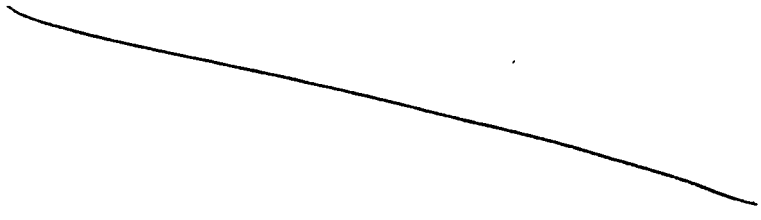

two-month period when he worked by himself. Adair further testified that he worked along with one additional premium auditor and they were able to perform all of SAF's premium audits.

Menie argues that there was a stark temporal distinction between when Adair worked at SAF and when Menie worked at SAF. Menie suffered his atrial fibrillation when he was working at SAF in 2003; Adair, however, provided testimony regarding the position of an auditor with SAF between 2010 and 2012. Menie contends that the conditions of employment between 2010 and 2012 were too remote to be relevant or material to the conditions of employment Menie experienced between January 1, 2003 and March 3, 2003. Menie, thus, claims the Commission erred as a matter of law by relying on Adair's testimony to make its decision.

The Court may reverse the Commission if it finds that the Commission's findings, inferences, conclusions, or decisions are affected by an error of law. *See* S.C. Code Ann. § 1-23-380(5) (Supp. 2015). Pursuant to the Administrative Procedures Act which governs hearings before the Commission, "[i]rrelevant, immaterial or unduly repetitious evidence shall be excluded." S.C. Code Ann. § 1-23-330(1) (1976). Upon further review of the record, the Court agrees with Menie that the Commission committed an error by admitting and relying upon Adair's testimony. The Court acknowledges that determinations regarding the relevancy and materiality of evidence generally are left within the sound discretion of the trial court, here the Commission. *See Bankers Trust of S.C. v. Bruce*, 283 S.C. 408, 416–17, 323 S.E.2d 523, 529 (Ct. App. 1984). Here, however, the Commission admitted and relied upon testimony from Adair concerning SAF working conditions nearly nine years after Menie suffered his heart condition. Menie suffered from his heart condition during a time when he had to manually enter "experience modifier" information into SAF's computer system; Adair did not have to manually enter experience modifier information because SAF's system was, by that time, automated. Moreover, Menie worked with SAF when it was using its own unique classification system; Adair worked for SAF after it transitioned to a national model coding system wherein the computer automatically generated necessary information. Adair's testimony was too remote to be relevant or material. *See, e.g., Rutledge v. St. Paul Fire & Marine Ins. Co.*, 286 S.C. 360, 368, 334 S.E.2d 131, 136 (Ct. App. 1985) (where the Court of Appeals upheld the trial court's determination that an appraisal of certain real property prepared three years before it was destroyed by fire was too remote to be admissible as evidence); and *Henderson v. St. Francis*

Community Hosp., 295 S.C. 441, 447–48 369 S.E.2d 652, 656 (Ct. App. 1988), *rev'd on other grounds*, 303 S.C. 177, 399 S.E.2d 767 (1990) (where the Court of Appeals upheld the trial court's determination that testimony concerning the condition of a parking lot approximately a year and a half after the plaintiff was injured in the parking lot was too remote to be admissible as evidence). The Commission expressly relied on Adair's testimony. *See Appellate Panel Decision and Order* at 3 ("A second witness for the Defendant (Mr. Adair) testified he had handled the job by himself and it was not as difficult as his previous jobs."). Accordingly, the Court finds that the Commission committed an error of law by admitting and relying upon Adair's testimony.

Although, however, the Court finds that the Commission committed an error of law by relying on Adair's testimony, this error was harmless. The Court may only reverse the Commission if Menie "has suffered the appropriate degree of prejudice *and* the [C]ommission's decision is affected by an error of law[.]" *Therrell v. Jerry's, Inc.*, 370 S.C. 22, 25, 633 S.E.2d 893, 894–95 (2006) (emphasis added). Accordingly, "an error is not reversible unless prejudice to the complaining party has resulted therefrom." *Sanders v. Wal-Mart Stores, Inc.*, 379 S.C. 554, 562, 666 S.E.2d 297, 301 (Ct. App. 2008). As discussed above, since substantial evidence exists in the record to support the Commission's decision, even when excluding Adair's testimony, Menie has not been prejudiced by the admission of Adair's testimony. In other words, this Court is not relying on Adair's testimony in finding that substantial evidence exists in the record to support the Commission's decision. The Court, thus, finds that the Commission's admission of, and reliance upon, Adair's testimony was harmless. *See, e.g., Eadie v. H.A. Sack Co.*, 322 S.C. 164, 172, 470 S.E.2d 397, 401 (Ct. App. 1996) (where the Court of Appeals found that although the Commission committed an error of law by improperly taking judicial notice of an industry standard, it was harmless and, thus, did not warrant reversal).

For the reasons stated above, the Court hereby **DENIES** Appellant's Motion for a New Trial, to Alter or Amend Judgment, and to Vacate and Remand this matter. Pursuant to Rule 59(f), the Court is of the opinion that oral argument is not necessary.

AND IT IS SO ORDERED.

Complete each information blank. To request a hearing, check Box 13b, indicate the kinds of benefits claimed by checking the box(es) at Lines 6, 7, 8, and 9, and file this form in duplicate.

A claim for workers' compensation benefits is made based on the following grounds: **Date of Injury or Illness:** 03-03-03

☒ Injury ☐ Illness ☑ Repetitive Trauma

1a. The claimant sustained an injury to heart/cardiovascular system/psychological (Part(s) of Body Injured) on 03-03-03 (Month/Day/Year) in Richland county,
1b. state of SC.
Body part(s) affected are: heart/cardiovascular system/psychological

Briefly describe how the accident occurred. Heart condition developed due to unexpected strain, over exertion and/or unusual and extraordinary conditions of employment including but not limited to stress-related to handling job duties of 3 employees - auditors and extraordinary rate increase during the period of Fall 2002 and then specifically December 27, 2002 through March 4, 2003.

2. Both the claimant and the employer were subject to the South Carolina Workers' Compensation Act at the time of injury.

3. The relationship of employer and employee existed at the time of injury.

4. At the time of the injury the claimant was performing services arising out of and in the course of employment.

5. Notice of the accidental injury was given to the Employer on 03-04-03 (Month/Day/Year) in the following manner: Telephone call to Ross Gamble.

☒ 6. Due to injury, the claimant is in need of (check one):

☑ (a) medical examination and treatment for: pursuant to treating cardiologist condition is chronic and permanent and will require lifetime treatment and reimbursement for past medical care.

☐ (b) additional medical examination and treatment for: Heart problems and psychological problems

☐ 7. Due to injury, the claimant requests temporary total disability benefits because of lost compensable time from work and wages for the period of:

☒ 8. Due to the injury, the Claimant has permanent disability of the following nature and extent (check one):

☒ (1) General Disability: ☒ Total ☒ Partial
☒ (2) Specific Disability: ☒ Total ☒ Partial
☒ (3) Wage Loss

☐ 9. Due to the injury, the Claimant has a serious bodily disfigurement consisting of: N/A

10a. At the time of the injury, the Claimant was paid weekly wages of $To Be Determined, and demands accounting of days worked and wages earned as provided by law.

10b. Give names and addresses of all employers for whom the Claimant has worked since the date of the accident: Same Employer - State Fund; now retired.

11a. Further grounds or unusual aspects of claim: Any and all benefits under the Act.

11b. List names and addresses of all physicians or other medical specialists who have seen or treated the Claimant as a result of the accident: Dr. C. W. Hendricks, M.D., Columbia Heart Clinic, Columbia, SC

11c. To the best of your knowledge, did you have any prior permanent disability? N/A
If yes, describe: _____

12. Appropriate benefits as provided in the Act for the above grounds and other relief as the Workers' Compensation Commission may direct as just and proper.

☐ 13a. **I am filing a claim. I am not requesting a hearing at this time.**

☒ 13b. **I am requesting a hearing. A $25 fee is required.**

14. Estimated time needed for hearing: 1 hour

I verify the contents of this form are accurate and true to the best of my knowledge.

Complete each information blank. Specify clearly when contentions are admitted in part and denied in part. The employer/carrier in answer to the claim, respectfully shows:

1. It is **denied** the employee sustained an injury or illness on or about the date set forth in the Form 50. The reasons for denial are:
   Claimant did not sustain any compensable accidental injuries within the course and scope of his employment. Specifically, the Claimant's job duties did not rise to the level of unusual or extraordinary such that they caused his alleged injuries/condition
2. It is **admitted** that both the employer and employee were subject to the Workers' Compensation Act at the time in question. The reasons for denial are:
3. It is **admitted** that the relationship of employer and employee existed at the time in question. The reasons for denial are:
4. It is **admitted** that at the time in question the employee was performing services arising out of and in the course of employment. The reasons for denial are:
5. It is **admitted** that notice of injury was given the employer. The reasons for denial are:
6. It is **denied** that the employee **needs** medical care as a result of injury or illness. The reasons for denial are:
   Claimant did not sustain any compensable accidental injuries within the course and scope of his employment.
7. It is **denied** that the employee is entitled to temporary total disability for the period(s) of :
   Claimant is not claiming he is entitled to TTD benefits
8. It is **denied** that the employee is permanently disabled. The reasons for denial are:
   Disability to be determined by the SCWCC
9. It is **denied** that the employee has serious disfigurement.
10. It is contended that an average weekly wage of **$775.11** applies, according to attached Form 20 as provided by law.

ATTACHMENT TO FORM 58

Alvin Menie v. State Accident Fund
WCC File No.: 0307461

4. a. Whether the Claimant suffered injury by accident arising out of and in the course of his employment. A heart condition, is compensable if it results from unexpected strain or overexertion in the performance of the duties of the employment or if it is as a result of unusual and/or extraordinary conditions in the employment. Mr. Menie was a Senior Premium Auditor in the Auditing Department of the State Accident Fund at the time he developed his heart condition of atrial fibrillation on March 3, 2003. The evidence will establish that in the time leading up to Mr. Menie's hospitalization on an emergency basis on March 3rd, 2003, that the Auditing Department performed 800+ audits and that the Auditing Department up until the end of December of 2002 consisted of three (3) auditors, in addition to Mr. Menie (Ms. Carla Johnson and Ms. Shawn Holloman) who performed those audits. Prior to January 1, 2003, the State Accident Fund advised all of its premium accounts that a huge rate increase would take effect on January 1, 2003 with an average rate increase of 24.7%. The evidence will establish that this resulted in a tremendous amount of additional workload, written communication and telephone calls with all the Agencies scrambling to minimize the effect of this tremendous rate increase on their particular agency. In addition, as of the end of December, the Auditing Staff went from three (3) to one (1), that being Mr. Menie due to the sickness of one auditor and the other auditor leaving the Agency. Therefore, not only was Mr. Menie left to do the work of three (3) auditors, thus increasing his workload from an auditing standpoint by three-fold during the time of January through March 2003, but he was left to field all of the questions and telephone calls and do all the responses necessary to respond to the tremendous rate increase. The Deputy Commissioner for the Agency described Mr. Menie's workload during this time and referred to his workload and the situation at the Agency in the Auditing Department in a Memo dated April 15, 2003 wherein he described it as, "you helped to keep these essential functions going throughout a period of transition caused by **staff turnover and other extraordinary circumstances**."

b. That as a result of the development of his medical heart condition and other conditions that have stemmed from this heart condition in reference to his heart and cardiovascular system, Mr. Menie has undergone four (4) emergency hospitalizations and has been under constant medical care for the heart condition which resulted from this injury by accident since March 3, 2003. His doctor has now said that his condition is permanent and that he will need lifelong medical care and the Claimant would request all the past, present and future medical care to be paid for as part of this compensable injury.

c. That as a result of the development of the heart condition and cardiovascular problems resulting from his injury by accident, the Claimant would submit that he is totally and permanently disabled. Based on his age education, background and experience and the physical facts of the injury, the jobs that he can perform are so limited in quality, quantity and dependability that a reasonably stable job market for them does not exist. Mr. Menie's treating cardiologist has stated that this injury to his heart has resulted in a 1/3rd decrease in his ability of his heart to function and that he is restricted to only performing the activities of daily living and can work in a sedentary capacity but without stress.

d. In the alternative, there is no question that the evidence will establish that Mr. Menie has suffered a substantial loss of earning capacity due to the injury resulting to his heart. He is limited to at best low stress jobs of a sedentary nature. Due to his income at the time of the injury, the Claimant would submit that he should be entitled to compensation for 340 weeks at the maximum compensation rate at the time of his injury for this permanent partial loss of earning capacity.

e. In the further alternative, the authorized treating cardiologist has stated that he has had a substantial loss of use of his heart to do any work requiring the use of his heart. The doctor stated that at best he is limited to sedentary low-stress work and therefore the Act provides that the Claimant under a scheduled member award for loss of use to the heart may receive a maximum award of 250 weeks for partial loss of use of the heart resulting from an injury. The Claimant would ask the Commission to award him the maximum award that it can

award him for the permanent loss of use of his heart as a result of this injury.

f. Claimant's entitlement to a lump sum award with Social Security language.

5. **IN CORRELATION WITH RESPONSES UNDER NUMBER 4:**

a. §42-1-160. Any heart condition or cardiovascular problem constitutes compensable injury by accident if it is induced by unexpected strain or overexertion in the performance or the duties of the Claimant's employment or by unusual and/or extraordinary conditions in the employment. Kearse v. S.C. Wildlife Resources Dept., 236 S.C. 540, 115 S.E.2d 183 (1960). The right to compensation is not effected by the fact that the unusual or excessive strain which participates the heart condition occurs while the employee is performing work of the same general type as that in which he was regularly involved. McWhorter v. S.C. Dept. of Insurance, 252 S.C. 90, 165 S.E.2d 365 (1969). The Supreme Court and Court of Appeals have specifically held repeatedly that where the heart problems result from extraordinary duties and/or an increase in hours or responsibilities that such conditions in the workplace constitute unusual and/or extraordinary conditions in the employment constituting injury by accident. See Kearse v. S.C. Wildlife Resources Dept., supra; Poulos v. Pete's Drive-In #3, 284 S.C. 264, 325 S.E.2d 583 (S.C. App. 1984), cert. denied., 286 S.C. 128, 332 S.E.2d 529 (1985); Canady v. Charleston County School Dist., 265 S.C. 21, 216 S.E.2d, 755 (1975); Cline v. Nosredna, 291 S.C. 75, 352 S.E.2d 291 (S.C. App. 1986). "Heart attack from pre-existing pathology coupled with unusual and extraordinary conditions of employment is a compensable injury." (Mr. Cline was the food manager for one restaurant and the employer added on a second restaurant and made him food manager over that restaurant.

Physical and/or mental or emotional problems resulting in disability are compensable if they result from unusual and/or extraordinary conditions in the employment. Smith v. NCCI, Inc., 369 S.C. 236, 631 S.E.2d 268 (S.C. App. 2006), reh. denied. See also Stokes v. First National Bank, 306 S.C. 46, 410 S.E.2d 248 (S.C. 1991); 298 S.C. 13, 377 S.E.2d 922 (S.C. App. 1988). (Workload with decrease in staff necessary to perform functions resulting in longer hours and/or more stress plus bank merger

constituted unusual and extraordinary conditions in the employment resulting from the same duties which the Claimant normally performed but increased workload and stress in his job was compensable.);

b. Claimant's entitlement to lifetime medical care under §42-15-60; Dykes v. Daniel Construction Co., 262 S.C. 98, 202 S.E.2d 646; Dodge v. Bruccoli, et al., 334 S.C. 574, 514 SE2d 593 (SC App 1999);

c. §42-9-10 and §42-1-120 defines total disability under §42-9-10; Coleman v. Quality Concrete Products, Inc., 245 S.C. 645, 142 S.E.2d 43 (1965); Colvin v. E.I. Dupont DeNemours Co., 227 S.C. 465, 88 S.E.2d 581 (1955); Stephenson v. Rice Services, 323 S.C. 113, 473 S.E.2d 699;

d. Permanent partial loss of earning capacity as provided in §42-9-20; Bowen v. Chiquola Mfg. Co., 238 S.C. 322, 120 S.E.2d 99 (1961); Bennett v. Gary Smith Builders, 271 S.C. 94, 245 S.E.2d 129 (1978);

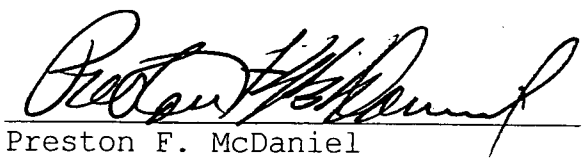

e. In the alternative, Claimant's entitlement to scheduled member awards under S.C. Code §42-9-30 and Commission Reg. 67-1101;

f. Claimant's entitlement to a lump sum award pursuant to S.C. Code §42-9-301 and R. 67-1605 with language in the award that such lump sum as awarded by the Commission is being ordered to be paid in lieu of the Claimant's entitlement to payments of compensation being made on a per week basis spread over the Claimant's lifetime (as established by the South Carolina Mortality Table, S.C. Code of Laws §19-1-150) which payment method the Commission may order under SC Code of Laws §42-9-240 and pursuant to James v. Anne's Inc., 390 S.C. 188, 701 S.E.2d 730 (2010):

> "The first installment of compensation payable under the terms of our award . . . shall become due seven days from the date of such an award... Thereafter compensation shall be paid in installments weekly, except when the Commission determines that payment shall be made monthly **OR in some other manner.**"

(Such language will be helpful to the claimant in avoiding any Social Security Setoff and is an Order of payment that can be made by the Commission).

Respectfully submitted,

Preston F. McDaniel
Attorney for the Claimant

MEDICAL STATEMENT

RE: Alvin L. Menie

To Whom It May Concern:

Mr. Menie is currently a patient under my care. Mr. Menie is on several medications and stopping any one of these would cause deterioration in his medical condition.

If you should have further questions, please feel free to contact my office.

Sincerely,

C.W. Hendricks, M.D.

CWH /lle

1). If considering that Mr. Menie's total number of audits nearly tripled ,which also correlates to increased hours worked, due to short staffing at his workplace prior to March 3, 2003, would you say, within a reasonable degree of medical certainty, that these factors caused increased stress, strain and exertion on Mr. Menie?

Yes ✓ No ____

2). If Mr. Menie did suffer from increased stress, strain and exertion at his workplace prior to March 3, 2003 due to an increased workload and longer work hours, would you say, within a reasonable degree of medical certainty, that that the increased stress, strain and exertion caused Mr. Menie to suffer from atrial fibrillation on March 3, 2003?

Yes ✓ No ____

3) Will Mr. Menie need ongoing medical treatment for his heart-related condition for the remainder of his life?

Yes ✓ No ____

4) If Mr. Menie does require life-long medical treatment for his heart-related condition, what exactly would this treatment include?

Anti-arrhythmic therapy indefinitely

FAXED 1-31-06

C. W. Hendricks, MD

Date 1/31/06

Dear Dr. Hendricks:

I would appreciate it if you could provide answers and opinions to the following questions concerning Mr. Menie and his heart condition:

1. Is it correct based on a review of your records and a review of the hospitalization records following his first atrial fibrillation on March 4, 2003 and specifically in reference to the Emergency Room records and the history and physical of Dr. Donald Alexander, M.D. and your consultation and discharge summary of March 7, 2003 that Mr. Menie had no history of cardiac problems or high blood pressure prior to the time of his admission to the hospital at that time?

✓
Yes

No

CWH (initials)

2. Is it correct based on a review of your records and based on your recollection that following the fact that the tests which in part were to address potential causes of new onset atrial fibrillation which all proved to be negative, that you and Mr. Menie had a discussion wherein he related to you in general terms that he was under a lot of job stress at work?

✓
Yes

No

CWH (initials)

3. Did you complete a Questionnaire on January 31, 2006 concerning Mr. Menie and the cause of the onset of his atrial fibrillation which consisted of four (4) questions and do the answers to the questions posed to you at that time still constitute your opinions to a reasonable degree of medical certainty (copy of the report is attached hereto and incorporated herein by reference as Exhibit 1)?

✓
Yes

No

CWH (initials)

4. Have you reviewed a description of the job responsibilities of Mr. Menie as an auditor with the State Accident Fund responsibilities (a copy of which is attached hereto and incorporated herein by reference as Exhibit 2) and does that constitute your understanding of the job responsibilities of Mr. Menie?

✓
Yes

No

CWH (initials)

5. Is it in fact true that you have reviewed and specifically discussed the changes in Mr. Menie's work load, hours and job responsibilities that occurred between 2002 and 2003 and specifically the facts that:

1. Each year the auditors for the State Accident Fund do approximately 600 audits per year which have to be done between July 1st and June 30th of a given physical year and that during this year, Mr. Menie and the other auditors had to perform those approximately 600 audits by June 20, 2003

2. Prior to December 27, 2002, there were three (3) auditors, Ms. Shawn Holman, Ms. Carla Johnson and Mr. Al Menie to do those audits and in addition, they had the assistance of a full-time position at least up until the Fall of 2002 to conduct those audits and the work of the auditing department including the audits for all state agencies which were due to be completed by December 31, 2002.

3. Then on or after December 27, 2002 one of the auditors, Ms. Shawn Holmon, left the agency with December 30, 2002 being her last day to take a position with the S.C. Retirement System and as of December 27, 2002, the other auditor, Ms. Carla Johnson was out of work for a back surgery leaving Mr. Al Menie to do the work of the Auditing Department. Also, by that time they had lost the full-time assistant position due to reorganization and the hiring of a Deputy Director.

4. As of January 1, 2003, the auditing team would have begun the auditing of cities, counties and other agencies other than the state agencies, all of which had to be completed by June 30, 2003.

5. The effect of these changes was that Mr. Menie was left as the only person to do the audits and carry to out the office/internal responsibilities of the auditing staff, specifically including all response necessary from telephone calls, correspondence or otherwise from the agencies to the State Accident Fund on all issues as set forth in the Auditor Position Responsibilities statement.

6. In addition, is it your understanding that in addition to now having to perform the work of three (3) auditors in reference to the audits and in reference to all of the other job responsibilities of the auditing staff of the State Accident

Fund (Fund) that the Fund had notified all policy holders that, effective January 1, 2003, rates increased an average of 24.7% and that this generated a tremendous increase in the amount of calls and requests for information concerning the various activities and information as is reflected in the auditor's responsibilities description, which you have reviewed.

All this combined to require Mr. Menie to work longer hours, to work through breaks and lunch and caused him to be unable to perform the auditing responsibilities due to constant interruption due to the numerous questions. Again, Mr. Menie was the sole person that was available to perform in the auditing department and was responsible for answering all these inquiries from December 27, 2002 through the date of his first atrial fibrillation on March 4, 2003. Did you also review the memorandum concerning a subsequent increase in salary from Mr. Ross Gamble in which Mr. Gambie, the deputy director of the agency stated that, "We recognize that during the past year you have played and continue to play a key role in collecting the revenue and conducting premium audits. You helped to keep these essential functions going throughout a period of transition caused by staff turnover and other extra ordinary circumstances." (Exhibit 3)

Does this concur with the information you have and properly reflect your understanding of Mr. Menie's job responsibilities and the changes that occurred in those job responsibilities and his hours of work and lack of help and job responsibilities during this period leading up to the time of his first atrial fibrillation on March 3, 2003?

✓
Yes

No

CWH (initials)

6. Are your opinions concerning the causation of his cadiological condition and specifically atrial fibrillation (which according to your records is now chronic) based upon your understanding of his job responsibilities and the work load that he was under as of the time of and leading up to his first atrial fibrillation on March 4, 2003?

✓
Yes

No

CWH (initials)

7. Based on your review of his job responsibilities and work load as set forth above and specifically between December 27, 2002 and March 4, 2003, is it your opinion to a reasonable degree of medical certainty that the cause of his onset

high blood pressure and the initial atrial fibrillation was the physical and emotional job stress placed upon him by his job duties and responsibilities?

✓
Yes

No

CWH (initials)

8. Is it a fact that among the medical community and specifically among cardiologist specializing in the treatment of cardiovascular problems that two of the known causes of atrial fibrillation is high blood pressure and physical and emotional stress?

✓
Yes

No

CWH (initials)

9. Is it your opinion to a reasonable degree of medical certainty that Mr. Menie's cardiological problems of atrial fibrillation and high blood pressure were caused by the physical and emotional stress arising out of and from his job duties, responsibilities and work load?

✓
Yes

No

CWH (initials)

10. Since it is a fact that a known cause of both high blood pressure and atrial fibrillation is physical and emotional stress and since Mr. Menie had no history of high blood pressure prior to his hospitalization on March 4, 2003 at which time he was diagnosed with both high blood pressure and atrial fibrillation, is it true that you cannot tell for sure which came first (as you put it, the chicken or the egg), the high blood pressure or the atrial fibrillation or if they in fact occurred or developed at the same time?

✓
Yes

No

CWH (initials)

11. Is it a proper statement of your opinion that since physical and/or emotional stress are known causes of high blood pressure and atrial fibrillation and since high blood pressure is a known cause of atrial fibrillation and because

both conditions, high blood pressure and atrial fibrillation, were present on March 4, 2003, it is difficult to tell whether or not Mr. Menie first developed high blood pressure from his physical and emotional stress which lead to his atrial fibrillation or if he developed both the high blood pressure and the atrial fibrillation simultaneously but in either case, it is your opinion that these conditions resulted from, as Mr. Gamble put it "extraordinary" job duties, responsibilities and work load of his job?

✓
Yes

No

CWH (initials)

12. Is it correct that it is your opinion as a board certified cardiologist that once a person has had an initial atrial fibrillation that the person is more susceptible to more atrial fibrillations and that in fact Mr. Menie's subsequent atrial fibrillations and his chronic condition of atrial fibrillation were caused by the physical and emotional stress arising out of and from his job responsibilities, duties and work load as set forth hereinabove?

✓
Yes

No

CWH (initials)

13. Is it your opinion that Mr. Menie will need ongoing medical treatment for his heart related condition and high blood pressure for the remainder of his life?

✓
Yes

No

CWH (initials)

14. Assuming that the answer above is yes, will that medical treatment include being under the treatment of a board certified cardiologist such as yourself, constant and regular medications, testing and monitoring to monitor his condition and other medical care?

✓
Yes

No

CWH (initials)

If there is other medical care other than that listed above, please set forth any specific medical care that you know he will need for the remainder of his life to treat his chronic atrial fibrillation and high blood pressure conditions:

a. _____

b. _____

c. _____

d. _____

e. _____

f. _____

The above referenced opinions and answers to the questions posed constitute my opinions and answers to a reasonable degree of medical certainty concerning my treatment of my patient, Al Menie.

_____ 12/7/10

Subject: RE: Our client/Your patient: Alvin Menie

Good afternoon Andrea. We have received the signed report of Dr. Hendricks dated January 12, 2012. Does the handwritten note under item # 2 state as follows:

"He should be limited and is not capable of strenuous, sustained and forceful physical work."

Thank you for your prompt attention and assistance in this matter.

Sincerely,
Patty K. Boatwright

Alvin L. Menie
Patient Acct. #:
DOB:

Dear Dr. Hendricks:

I would appreciate it if you could provide answers and opinions to the following questions concerning your patient, Mr. Al Menie:

1. After review of your records concerning Mr. Menie's treatment since 2003 and your current diagnosis, as you explained in your deposition and after review of the AMA Guidelines, 5th Edition, in your opinion what impairment does Mr. Menie have pursuant to the AMA Guidelines of the Rating of Permanent Physical Impairment found between pages 56 and 61 of the AMA Guidelines 5th Edition?

30-49% %

CWH (initials)

2. In your opinion as his treating cardiologist, should Mr. Menie be limited in the type of work activities he should do, and what should those limitations include?

He should be limited + is not capable of any strenuous, sustained or forceful physical work

3. Based on the five physical demand work categories under the U.S. Department of Labor's Physical Demand Work Classification system as published in the Dictionary of Occupational Titles, what physical demand category does Mr. Menie best fit into (please circle)?

(Sedentary) Light Duty Medium Duty Heavy Duty Very Heavy Duty

CWH (initials)

The above referenced opinions and answers expressed by me constitute my opinions and answers to a reasonable degree of medical certainty concerning Mr. Al Menie.

Charles W. Hendricks, M.D.

DISCHARGED:
T: 03/04/2003 9:35 AM /lms
PHYSICIAN: V SCOTT CARROLL, MD
SSN:

CHIEF COMPLAINT: "I feel dizzy."

HISTORY OF THE PRESENT ILLNESS: The patient is a 59-year-old who presents to the Emergency Department with acute onset of dizziness tonight which he describes the room as spinning. He has had associated diaphoresis profusely. He has also been vomiting. Denies any headache, tinnitus, visual changes, chest pain, shortness of breath, or any symptoms consistent with angina other than his diaphoresis and vomiting. He has had no headache.

PAST MEDICAL HISTORY: He has been diagnosed with vertigo in the past and has actually taken ( )in the past for this. He also has a history of cellulitis and he has obstructive sleep apnea for which he is on CPAP.

ALLERGIES: None known.

PHYSICAL EXAM: VITAL SIGNS: Temperature 97, pulse 103 and irregular, blood pressure 145/94. Oxygen saturation 99%. Respirations 18. GENERAL: Very pale White male, his shirt is wet from diaphoresis. HEENT: Pupils equal, round, and reactive to light. Serous effusions bilaterally. Oropharynx clear. NECK: Supple. NEUROLOGIC: Positive Hall-Pike and in fact began having dry heaves after the Hall-Pike test. LUNGS: Clear. CARDIOVASCULAR: Irregularly irregular rhythm. No appreciable murmur or rub was noted. ABDOMEN: Soft, nontender. EXTREMITIES: Warm. Can move all extremities without difficulty. SKIN: Moist to touch.

MEDICAL DECISION MAKING: A 59-year-old who presents with vertiginous symptoms however, he also has an irregularly irregular pulse with no history of atrial fibrillation.

DIAGNOSTIC STUDIES: EKG reveals atrial fibrillation without obvious signs of ischemia. Cardiac enzymes negative. CT scan of the brain negative. Chest x-ray no congestive failure. CBC normal WBC 11,000 and he does have a left shift. CMET shows a CO2 that is low at 20 with anion gap 16.

EMERGENCY DEPARTMENT COURSE: TREATMENT: Given 500 cc bolus of saline and Phenergan 25 mg IV. Also placed him on 5 mcg of nitroglycerin.

DIAGNOSIS(ES):
1. New onset atrial fibrillation.
2. Vertiginous symptoms most likely vertigo benign positional possibly anginal equivalent.

DISPOSITION: Due to his diaphoresis and vomiting and his new onset atrial fibrillation I have consulted with cardiology, Dr. Alexander was here in the Emergency Department and saw the patient and is admitting him to PCU for further evaluation. The patient is currently stable and is feeling improved after his Phenergan and IV fluids.

PHYSICIAN: M DONALD ALEXANDER, MD
SSN:

HISTORY OF THE PRESENT ILLNESS: This patient is a 59-year-old gentleman with a longstanding history of sleep apnea using CPAP. He has also had a history of chronic lower extremity venous insufficiency with a history of cellulitis. He otherwise has been in fairly good health according to he and his family.

The patient had an acute onset of vertigo this evening associated with significant nausea, diaphoresis and vomiting. He was extremely weak. Due to these problems he was brought to the emergency department at Lexington where he was noted to be in atrial fibrillation. The patient has no prior known history of cardiac problems. No history of arrhythmia. He has had no similar episodes to his present illness.

He has not had any chest pain consistent with angina and he has not had any overt symptoms of congestive heart failure. Due to the new onset atrial fibrillation a cardiology consultation was kindly requested. The patient did undergo a noncontrasted CT of the head, which by report is normal.

REVIEW OF SYSTEMS: The patient does have a history of allergies and has had some congestion in his ears last week for which he took some ear drops. He has not had any fever, chills, or sore throat. He denies any blurred vision or lateralizing neurological signs. He denies any dysphagia. He has not had any particular chest pain or shortness of breath, but he does have chronic sleep apnea. He is obese. He denies any abdominal pain or history of peptic ulcer disease. He does admit to chronic lower extremity edema and a history of cellulitis in his left lower extremity.

CURRENT HOME MEDICATIONS: Allegra and Antivert.

ALLERGIES: None known.

PHYSICAL EXAMINATION:
VITAL SIGNS: Blood pressure 130/90, pulse 90/irregular.
GENERALLY: Obese, pleasant in no acute distress; however, when he moves his head he becomes profoundly nauseated.
NECK: Preserved carotid upstroke without bruits. No neck vein distention. No thyronegaly.
LUNGS: Clear to percussion and auscultation.
CARDIOVASCULAR: Irregular rhythm without detectable murmur. No gallop.
ABDOMEN: Morbidly obese without definite mass, organomegaly or tenderness. Bowel sounds are normal and no abdominal bruits. Femoral pulses are 1+ and lower extremity pulses are diminished.
LOWER EXTREMITIES: Revealed chronic brawny changes with 2+ lower extremity edema at the ankles.

DIAGNOSTIC STUDIES: Electrocardiogram reveals atrial fibrillation with variable ventricular rate response, delayed ( ) progression, nonspecific ST changes. There are no changes consistent with acute injury. CBC reveals a normal WBC with a significant left shift, HGB 16, HCT 46.9. Electrolytes are intact. Cardiac enzymes initially are negative. Noncontrasted CT of the head is reported as normal.

DIAGNOSTIC IMPRESSION:
1. Acute vertiginous episode, questionable etiology, suspect most likely either ears, nose and throat or

central nervous system etiology.
2. Arrhythmias manifested by probable new onset atrial fibrillation. However, must rule out underlying coronary artery disease, rule out underlying cardiomyopathy.
3. History of sleep apnea.
4. Chronic obesity.
5. Probable history of chronic lower extremity venous insufficiency with previous cellulitis.

PLAN:
1. The patient will be admitted to the progressive coronary care unit on rule out MI protocol, serial EKGs and enzymes.
2. We will monitor closely with control of his rate.
3. We will treat him for his vertigo with ENT consult in the morning as well as neurological consultation.
4. Continue his home medications to include CPAP.
5. Check lower extremity venous Doppler.
6. Further disposition based on subsequent findings.

My partners and I appreciate the opportunity to participate in the care and evaluation of this patient. I would like to thank Dr. Carroll in the ED for his kind referral.

PHYSICIAN: CHARLES W HENDRICKS, MD
SSN:

PROCEDURE: Transthoracic echocardiogram was performed with M-Mode, 2-D, Spectral Doppler and Color Flow Analysis.

TECHNICAL FINDINGS: The left atrium is dilated at 5 cm with normal aortic root and aortic valve excursion. Septal and posterior wall thicknesses are normal in a slightly dilated LV cavity with normal systolic performance with an ejection fraction calculated at 64%. The right ventricle is normal. There is no pericardial
effusion. Mitral E:F slope and DE excursion are normal and there is no evidence of mitral valve prolapse.

Two-D echo supports the M-Mode findings with normal valve and chamber relationships and normal left ventricular systolic performance.

Doppler and color flow interrogation demonstrates essentially normal peak velocities and flow patterns with mild tricuspid insufficiency and modest pulmonary hypertension at 37 mmHg - probably within a wide normal range.

DIAGNOSTIC IMPRESSION:
1. Left atrial enlargement.
2. Slight ventricular dilatation with normal systolic performance - probably normal for this body size.
3. Incidental tricuspid insufficiency with modest pulmonary hypertension.

DATE OF STUDY: 03/04/03

NONINVASIVE LOWER EXTREMITY VENOUS DUPLEX STUDY

HISTORY: The patient is a 59-year-old male referred by Dr. Alexander because of bilateral lower extr edema. He has risk factors of obesity. He also has atrial fibrillation.

TECHNICAL DATA: The patient underwent full evaluation of both lower extremities from the groins to t ankles. Duplex scan evaluation of the bilateral lower extremities revealed spontaneous and phasic flo through all deep and superficial venous tributaries scanned. Good response to compression and augmentation ted. No intraluminal echogenic densities are detected.

FINAL IMPRESS_ON: Negative DVT study of the bilateral lower extremities. No evidence of deep or superficial venous thrombosis.

1. New onset atrial fibrillation.
2. Hypertension.
3. Obesity.
4. Dizziness.

PROCEDURE(S) PERFORMED:
1. Echocardiogram.
   a) Left atrial enlargement at 5 cm.
   b) Slight ventricular dilatation with normal systolic performance and EF 64%.
   c) Incidental tricuspid insufficiency with modest pulmonary hypertension.

HOSPITAL COURSE: This is a 59-year-old white male who was admitted on 03/03/03 with dizziness and new onset atrial fibrillation with rapid ventricular rate. He was admitted to the PCU for cardiac monitoring, where his cardiac enzymes were negative. He was put on Lovenox. CT of the brain was negative with the exception of some benign calcification in the basal ganglia bilaterally. Free T4 and TSH were within normal limits. He was started on amiodarone 200 mg p.o. b.i.d., and Vasotec 5 mg p.o. q.d. for hypertension. On 03/06/03, which was the expected date of discharge, he had converted back into atrial fibrillation. He increased his amiodarone and started him on Coumadin. This morning he is back in sinus rhythm, ambulating independently, having no problems, and his blood pressure is improved. Will plan to send him home today on his current medications, have him get his PT checked on Monday morning in our office, and then follow up with Dr. Hendricks in the next 2 weeks. We will complete Coumadin teaching today before he leaves as well.

DISCHARGE PHYSICAL EXAMINATION:
GENERAL: Awake, alert and oriented, ambulating independently without problems.
VITAL SIGNS: Temperature 97.4, heart rate 70/regular, respirations 20/even and unlabored, BP 120/70.
CARDIOVASCULAR: S1 and S2 without murmur, rub, gallop or click. Peripheral pulses are palpable. There is no JVD, peripheral edema, carotid bruits or femoral bruits.
LUNGS: Clear bilaterally.
ABDOMEN: Soft, nontender, obese. No palpable masses. Bowel sounds are present x4.

DIAGNOSTIC STUDIES: PT 14.3, INR 1.12, PTT 31.5. Free T4 0.9, TSH 0.57. CBC within normal limits. CMET within normal limits. Cardiac enzymes negative.

DISCHARGE MEDICATIONS:
1. Amiodarone 400 mg p.o. b.i.d. for the next 2 days and then decrease to 200 mg p.o. b.i.d.
2. Coumadin 5 mg p.o. q.h.s. and as directed by our clinic.
3. Vasotec 5 mg p.o. q.d.
4. Baby aspirin 1 p.o. q.d.

DISPOSITION: Will discharge him home today. He will have his Coumadin level checked in our clinic

Monday morning. I have contacted the Coumadin Clinic so they are aware of him. He will follow up with Dr. Hendricks in our office in the next week and a half to 2 weeks with an EKG and certainly sooner if needed. He will have Coumadin teaching completed, which I have already started. He knows to be careful with bleeding precautions. If he has problems with dizziness in the future on the amiodarone and in sinus rhythm, may investigate an ENT consult as an outpatient.

PHYSICIAN: PATRICK S HUNT, MD
SSN:

CHIEF COMPLAINT: Nausea and vomiting.

HISTORY OF THE PRESENT ILLNESS: The patient is a 61-year-old male who presents to the Emergency Department with nausea and vomiting. Patient states that he was at work today. He states that he felt bac and got very diaphoretic and started vomiting. He states that he had a similar episode earlier last year when he went into atrial fibrillation. Patient states now he is feeling kind of funny. He denies any other complaints. He has not had any chest pain or shortness of breath associated with this episode. He states just nausea, vomiting and the profound diaphoresis. He denies any fevers, chills or diarrhea.

REVIEW OF SYSTEMS: Otherwise negative.

PAST MEDICAL HISTORY: Hypertension, A fib and knee surgery.

CURRENT MEDICATIONS: Listed and reviewed.

ALLERGIES: VIOXX.

PRIVATE PHYSICIAN: Dr. Hendricks.

PHYSICAL EXAMINATION: VITAL SIGNS: Noted and unremarkable. HEENT: Normocephalic, atraumatic. Pupils equal, round, and reactive to light bilaterally. TMs clear. Oropharynx clear. NECK: Supple. CARDIOVASCULAR: Irregularly irregular. LUNGS: Clear to auscultation bilaterally. ABDOMEN: Soft, nontender. Bowel sounds are present. EXTREMITIES: Moves all extremities without difficulty. No clubbing, cyanosis or edema. NEUROLOGIC: Alert and oriented x3. Cranial nerves 2-12 are grossly intact. Grp strength 5+/5+. Gait is within normal limits. SKIN: Warm and dry.

DIAGNOSTIC STUDIES: EKG did show evidence of A fib. He had a history of being A fib in the distant past with similar symptoms and had converted out. He stopped his Coumadin about 6 months ago. CBC and
BMET were remarkable only for a potassium of 2.6. Cardiac profile negative. Chest x-ray and acute abdominal
series showed no acute infiltrate. Some slight atelectasis noted.

EMERGENCY DEPARTMENT COURSE: In light of these findings I did speak with Dr. Hendricks and think that the patient will benefit from admission, he is in agreement.

PROVISIONAL DIAGNOSIS(ES)
1. Recurrent onset of atrial fibrillation.
2. Hypertension.

PLAN: Admitted/Dr. Hendricks. Further disposition/Dr. Hendricks.

PHYSICIAN: CHARLES W HENDRICKS, MD
SSN:

IDENTIFICATION: This is a 61-year-old white male.

PROBLEM: Atrial fibrillation.

HISTORY OF PRESENT ILLNESS: The patient was admitted to the Lexington Medical Center in March 2003 for dizziness and weakness as his only symptom of new onset atrial fibrillation. This was on the backdrop of hypertension, obesity, sleep apnea, and intermittent chronic dizziness, and basically an evaluation was carried out that showed a left atrium of 5 cm and some ventricular dilation but preserved LV systolic performance. He was treated with diuretics, anticoagulation, and amiodarone, and cardioverted, and has remained in sinus rhythm since that time, with several follow-up office visits showing no important abnormality. Amiodarone was maintained, but because of the persistence of sinus rhythm Coumadin was stopped several months ago, and he did well until this afternoon. At that time, while seated at his computer and anguishing over a lot of situational stresses with reference to his job, he had recurrent dizziness without palpitations or syncope, and intense nausea and vomiting identical to those symptoms he had in March 2003. At the time of this interview he is fairly comfortable but still feels like he has a "leftover headache" but not aware of palpitations.

ALLERGIES: None known.

MEDICATIONS: Allegra p.r.n., amiodarone 200 mg daily, HCTZ 25 daily, Cozaar daily. He also uses CPAP at home.

PERSONAL HABITS: No tobacco or alcohol.

REVIEW OF SYSTEMS: Since last seen he has had left knee arthroscopic surgery. He has hypertension,
sleep apnea, prior atrial fib, obesity, and intermittent dizziness, with his most intense episode being related to
atrial fibrillation. He has had no nausea, vomiting, diaphoresis, GI, GI, ENT or other bleeding, and the rest of
the review is negative.

FAMILY HISTORY: Negative for premature atherosclerosis or other major inheritable or transmissible disorder.

PHYSICAL EXAMINATION
VITAL SIGNS: BP 140/80.
GENERAL: Awake, alert, cooperative, oriented, in no apparent distress.
HEENT: Free of icterus, extraocular movements are intact.
NECK: No jugular venous distention. Carotids are brisk, without bruit or thrill.
LUNGS: Clear to A&P.
CARDIAC: Precordium is quiet to palpation. S1 and S2 normal, with an irregular-irregular rhythm and a flow
murmur at the apex without click, rub, gallop or diastolic sound.
ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit.
EXTREMITIES: Free of edema, with good distal pulses.

DIAGNOSTIC STUDIES: EKG shows atrial fib with controlled ventricular response with some tendency to
slowing at times.

DIAGNOSTIC IMPRESSION
1. Atrial fibrillation, previously established, now recurrent.
   a) Dizziness, nausea and vomiting as presenting symptoms.
   b) Potassium 3.6, on hydrochlorothiazide.
2. Hypertension.
3. Obesity.
4. Sleep apnea.
5. Prior negative work-up for ischemic heart disease.

RECOMMENDATIONS: At this point p.o. and IV potassium will be offered and lab will be rechecked in the
morning. Lovenox and Coumadin will be started, and he will have routine laboratory work performed. At this
point there seems no reason to repeat his echocardiogram or other studies, with hopefully his potassium depletion leading the way in terms of this current syndrome.

I would like to thank Dr. Nagel for letting us continue to see this patient in consultation.

PHYSICIAN: J KEVIN BAUGH, MD
SSN:
DICTATED BY: GRACE KLUDO, ACNP

ADMITTING PHYSICIAN: Dr. C.W. Hendricks.

ADMITTING DIAGNOSIS(ES)
1. Symptomatic atrial fibrillation, recurrent.
2. History of hypertension.
3. Obstructive sleep apnea.

DISCHARGE DIAGNOSIS(ES)
1. Recurrent atrial fibrillation, resolved.
2. Hypertension.
3. Obstructive sleep apnea.

DIAGNOSTIC STUDIES: Glucose 145, sodium 141, potassium 4.0, chloride 104, CO2 30, anion gap 7, BUN 16, creatinine 1.2, calcium 8.9. Potassium was 2.6 on admission and has been replaced. Chest x-ray showed right pulmonary parenchymal scaring versus linear atelectasis. Abdominal series showed no acute disease in the abdomen, right basilar atelectasis or pneumonia and cardiomegaly. EKG showed atrial fibrillation with a rate of 100. Subsequent EKG showed normal sinus rhythm, sinus bradycardia.

PAST MEDICAL HISTORY
1. Lone episode of atrial fibrillation.
2. History of hypertension.
3. Obstructive sleep apnea.

CURRENT MEDICATIONS
1. Amiodarone 200 p.o. b.i.d.
2. HCTZ 25 p.o. daily.
3. Cozaar 25 p.o. daily.
4. Allegra D b.i.d.

5. Celebrex 200 daily.

ALLERGIES: VIOXX CAUSES A RASH.

HOSPITAL COURSE: This is a pleasant 61-year-old male who is followed by Dr. Hendricks in the office with history of lone episode of atrial fibrillation. He has been maintained on Amiodarone therapy and Coumadin therapy had been stopped 6 months ago as he had maintained normal sinus rhythm on the Amiodarone. He presented to the Emergency Department with complaints of dizziness, nausea, vomiting and
pre-syncope. In the Emergency Department, he seemed to have returned to atrial fibrillation with a rate of 100.
His potassium was noted to be 2.6. His potassium was replaced. He was maintained on Amiodarone. He received Lovenox and Coumadin therapy. Converted to normal sinus rhythm the night after admission and will
be discharged home today to follow-up with Dr. Hendricks.

DISCHARGE MEDICATIONS: He will be maintained on Amiodarone 200 b.i.d. Sent home with Coumadin
5. Instructed to continue his other home medications.

PLAN: Follow-up in the office on Tuesday with PT, INR check and instructed to see Dr. Hendricks in the next
2 weeks. Of note, the patient had requested a sleep aid and wanted Dr. Baugh to write a prescription for controlled sleep medication. Dr. Baugh did not do this as he has history of obstructive sleep apnea and uses
CPAP machine at home.

HOLTER MONITOR REPORT

The patient was monitored for 23 hours 29 minutes. During the period of observation, the underlying rhythm
was normal sinus rhythm with normal PR and QT intervals.

During the period of observation, the patient had mild bradycardia with a minimum heart rate of 48 BPM at
5:15 p.m. No pauses greater than 2 seconds were noted.

During the period of observation, the patient had only 1 PVC with no other ventricular ectopy.

During the period of observation, the patient had 6 isolated premature atrial contractions but no sustained or
complex supraventricular ectopy.

CONCLUSION: Generally unremarkable 24-hour Holter monitor with no significant dysrhythmia noted.

SIGNED REPORT IN DEPARTMENT.

Diagnoses

Vomiting

Vertigo (Peripheral)

You have been evaluated today by an independent healthcare provider practicing Emergency Medicine. In most cases follow-up care is recommended with your regular Doctor, HMO or Clinic.

Within 5 days ☒ Doctor ☒ HMO ☒ Clinic

Call for appointment as soon as possible. IDENTIFY Yourself as an ER Patient. If you don't have a doctor or need a specialist follow up with:

Physician/Specialist **CARTER,DEE,MD**

Address **214 OLD CHAPIN ROAD**

Phone **(803)951-2750**

Additional Instructions

If the symptoms worsen or new symptoms develop return to the Emergency Department (ED) immediately. Call your doctor for additional questions.

ED phone number: 803-936-8128

Follow up with your MD if symptoms have not resolved in 3-4 days. Return if severe dizziness or persistent vomiting develop.

Additional instructions were given on the following conditions:

- ☒ Abdominal Pain
- ☒ Allergic Reaction/ Rash
- ☒ Asthma/ Wheezing/COPD
- ☒ Back Pain
- ☒ Chest Pain
- ☒ Conjunctivitis
- ☒ Corneal Abrasion/Eye Injury
- ☒ Fever
- ☒ Fracture/Sprain/Contusion
- ☒ Gastritis/Ulcer
- ☒ Head Injury
- ☒ Headache
- ☒ High Blood Pressure
- ☒ Kidney Stone

Other

- ☒ Neck Strain
- ☒ Nose Bleed
- ☒ Middle Ear Infection
- ☒ PID/STD
- ☒ Sore Throat/Pharyngitis
- ☒ Threatened Abortion
- ☒ Toothache
- ☒ Upper Respiratory Infection
- ☒ UTI/Kidney Infection
- ☒ Vaginal Bleeding
- ☒ Vomiting/Diarrhea
- ☒ Wound Care/Skin

Work/School Restriction:

☒ You may return to work/school today.

You may not return to work/school until:

This information may be released to my school or employer

☒ If you had x-rays or blood tests, please note that radiologists always show what's wrong. Sometimes x-rays do not show broken bones. After review by a specialist you will be notified if there is an abnormality.

☒ You may not drive or operate heavy machinery because the medicines you have may make you sleepy.

DATE OF VISITATION: 09/23/2008

ACCOUNT NUMBER:

ACCOUNT NUMBER:

ATTENDING PHYSICIAN: James Palma, MD

MODE OF ARRIVAL: POV.

CHIEF COMPLAINT: Complaining of dizziness.

HISTORY OF PRESENT ILLNESS: The patient became dizzy and diaphoretic at about 12:30 and this was continuous until he felt better about 30 minutes prior to arrival, states this is similar to previous episodes he has had of atrial fibrillation. The patient denies any chest pain, no numbness or weakness, no joint pain, no jaw pain. As stated above the patient has a history of atrial fibrillation. He said this episode is very similar only not as bad as previous episodes. He has had three episodes prior to this in 2003, 2004, and 2007. States he has never been electrically cardioverted however they have chemically cardioverted him in the past, does not remember the medications. States he is currently taking amiodarone and propranolol. Dr. Hendricks is his cardiologist. The patient describes dizziness as though the room is spinning, is not necessarily positional.

REVIEW OF SYSTEMS: Positive for headache, positive for nausea, no vomiting, no loss of consciousness, no shortness of breath, no abdominal pain. The rest of review of systems is negative.

PAST MEDICAL HISTORY: Includes atrial fibrillation, hypertension, possibly diabetes, and sleep apnea.

States he is currently taking amiodarone and propranolol. Dr. Hendricks is his cardiologist. The patient describes dizziness as though the room is spinning, is not necessarily positional.

REVIEW OF SYSTEMS: Positive for headache, positive for nausea, no vomiting, no loss of consciousness, no shortness of breath, no abdominal pain. The rest of review of systems is negative.

PAST MEDICAL HISTORY: Includes atrial fibrillation, hypertension, possibly diabetes, and sleep apnea.

FAMILY HISTORY: Noncontributory.

ALLERGIES: He is allergic to sulfa.

MEDICATIONS:
1. Coumadin.
2. Cozaar.
3. Hydrochlorothiazide.
4. Propranolol.
5. Sudanophil.
6. Amiodarone.

SOCIAL HISTORY: Negative for tobacco or ETOH. Works for the state accident fund.

PHYSICAL EXAMINATION:
VITAL SIGNS: Temperature is 97.7. Pulse rate is 49. Respiratory rate is 18. Blood pressure is 140/82. Pulse oximetry is 98%.
GENERAL APPEARANCE: The patient is nontoxic appearing in no respiratory distress.
SKIN: Warm and dry.
HEENT: Pupils are equal, round, and reactive to light. Tympanic membranes clear, nares patent, pharynx is clear, no erythema or exudate noted.
NECK: Supple, no adenopathy noted.
RESPIRATORY: Clear to auscultation bilaterally. No wheezing, rales, or rhonchi. CARDIOVASCULAR: Irregular rhythm, irregular rate on auscultation. Cardiac monitor shows atrial fibrillation.
ABDOMEN: Soft, nontender to palpation in all four quadrants, no rigidity, guarding, or rebound tenderness, or peritoneal signs.
EXTREMITIES: Good distal pulses in all extremities, full range of motion.

NEUROLOGIC: The patient alert and oriented times three, no focal deficits.

CLINICAL IMPRESSION: The patient appears to be in atrial fibrillation, has had a history of this in the past. However due to the fact that he has had symptoms that now have resolved while his atrial fibrillation continues, need to rule out ischemia or myocardial infarction. We will also check his coag levels and do a bedside ultrasound and chest x-ray to rule out aortic dissection.

TREATMENT: The patient was given aspirin 325 mg. Course during ED stay

is otherwise uneventful. The patient remained symptom free.

LABORATORY DATA: An EKG shows atrial fibrillation with a rate of 50, no signs of MI or ischemia. The patient's coag pro-time is 23.9, INR is 1.9, and PTT is 34.3. A BMP shows sodium 141, potassium is 3.5, chloride is 102, bicarb is 27, glucose is 207, BUN is 22, creatinine is 1.2, calcium is 9.0, cardiac enzymes are negative at less than 0.03 troponin, CPK is 69, CK-MB is 1.3.

DIAGNOSIS: Atrial fibrillation.

DISPOSITION: Due to patient's history of this, and risk factors for cardiac ischemia we will admit the patient to the CPU and monitor his cardiac enzymes, and have Columbia Heart followup with him in the morning.

History & Physical

DATE OF VISITATION: 09/23/2008

ATTENDING PHYSICIAN: James Palma, MD

MODE OF ARRIVAL: POV

CHIEF COMPLAINT: The patient is complaining of atrial fibrillation.

HISTORY OF PRESENT ILLNESS: The patient states that he became dizzy and diaphoretic at about 12:30 which is typical for his previous atrial fibrillation episodes. He stated this episode is similar or not as bad. He states that he began to feel better 30 minutes prior to arrival and now is symptom free. He denies any chest pain at the time of this episode. No numbness or weakness. No joint pain during the episode. The patient describes his dizziness as though the room is spinning. The patient had had previous episodes of atrial fibrillation in 2003, 2004 and 2007. He states he has never been electrically cardioverted, has been chemically cardioverted in the past. He does not remember the medication. The patient is currently taking propranolol and amiodarone. The patient's cardiologist is Dr. Hendricks.

REVIEW OF SYSTEMS: Positive for headache, nausea, no vomiting. No loss of consciousness. No shortness of breath. No abdominal pain. He has some chronic back pain.

ALLERGIES: Sulfa.

FAMILY HISTORY: Noncontributory.

SOCIAL HISTORY: No tobacco, no EtOH. [___]

PAST MEDICAL HISTORY: Atrial fibrillation, hypertension, possibly diabetes and sleep apnea for which he uses CPAP.

MEDICATIONS:
1. The patient is on Coumadin.
2. Cozaar.
3. Hydrochlorothiazide.
4. Propranolol.
5. [___].
6. Amiodarone.

PHYSICAL EXAMINATION:
VITAL SIGNS: The patient's temp is 97.7, pulse 49, respirations 18, blood pressure 140/87. Pulse ox 90%.
GENERAL APPEARANCE: The patient is nontoxic appearing, in no respiratory distress.
SKIN: Warm and dry.
HEENT: Pupils equal, round, reactive to light. Tympanic membranes are clear. Nares patent. Pharynx clear. No erythema or exudate noted.
NECK: Supple. No adenopathy noted.
HEART: Irregular rate, irregular rhythm. Pulse is bradycardic around 50 beats per minute. Monitor shows atrial fibrillation.
RESPIRATORY: Clear to auscultation bilaterally. No wheezing, rales or rhonchi.
ABDOMEN: Soft, nontender to palpation in all 4 quadrants. No rigidity, guarding, or rebound tenderness.
EXTREMITIES: Good distal pulses in all extremities. Full range of motion.

NEUROLOGICAL: A 0 x3. No focal deficits noted.

CLINICAL IMPRESSION: The patient is in atrial fibrillation, has had previous atrial fibrillations in the past. He has required chemical cardioversion in the past. However, due to patient having symptoms that have now resolved while atrial fibrillation has continued, we rule out ischemia or myocardial infarction. We will also perform an ultrasound and chest x-ray to rule out other pathology.

TREATMENT: The patient was given aspirin 325 mg p.o. x1. The patient remains asymptomatic.

LABS AND IMAGING: EKG shows atrial fibrillation with a controlled rate of 50. No signs of MI or ischemia. Cardiac enzymes are negative. Troponin less than 0.03. CPK 69, CK MB 1.3. BMP: Sodium 141, potassium 3.5, chloride 102, bicarb 27, BUN 22, creatinine 1.2, glucose 207, calcium 9. Coags: Pro time is 23.9, INR is 1.9, PTT 34.3. Chest x-ray is negative for pathology.

DIAGNOSIS: Atrial fibrillation with a controlled rate and stable.

DISPOSITION: The patient was admitted to the chest pain unit and his cardiac enzymes and EKGs will be followed. Columbia Heart will follow up with patient in the morning.

Consultation Report

DATE OF CONSULTATION: 09/23/2008

ATTENDING PHYSICIAN: Benjamin R. Jones, MD

REFERRING PHYSICIAN: William H. Richardson, MD

PRIMARY CARE PHYSICIAN: D. Carter. M.D.

REASON FOR REFERRAL: Patient with atrial fibrillation.

PROBLEMS:
1. Cardiac.
A. Intermittent atrial fibrillation.
B. Amiodarone and Coumadin therapy.
C. Prior stress Cardiolite said to be negative.
2. Sleep apnea with CPAP therapy.
3. Hypertension.
4. Patient presents with headache, dizziness, diaphoresis, and vomiting. This is approximately the third or fourth episode he has had over the last two years.

HISTORY OF PRESENT ILLNESS: This is a 65-year-old white male with a history of hypertension and intermittent atrial fibrillation who presents with sudden onset of headache, dizziness, diaphoresis and vomiting. He has had at least three other episodes like this in the past two years. Each time that he has presented to the emergency room he has been in atrial fibrillation. However he does go in and out of atrial fibrillation

typically without symptoms, in fact recently was seen by Dr. Hendricks and had his amiodarone therapy increased to 200 twice daily.

PAST MEDICAL HISTORY: As above.

PAST SURGICAL HISTORY: Remote appendectomy.

ALLERGIES: Sulfa.

HOME MEDICATIONS: Include:
1. Amiodarone 200 twice daily.
2. Viagra 100 mg p.r.n.
3. Propanolol 20 mg three times daily for tremors.
4. Hydrochlorothiazide 25 mg daily.
5. Coumadin.
6. Losartan 50 mg daily.

REVIEW OF SYSTEMS: Currently, he is without symptoms of headache, dizziness, or nausea. In fact, this time this episode was the least severe episode because he took nausea medicine and antivertigo medicine as well. He denies chest pain. He denies shortness of breath. He has lost approximately 20 pounds over the last two months intentionally, has felt much better since he has had the weight loss. Denies orthopnea. Denies any recent fever, chills, cough. Systems otherwise negative.

SOCIAL HISTORY: He works as an auditor for the state, plans to retire in the near future. He denies tobacco. Denies alcohol. Denies illicit drugs. He is married and gets no formal exercise.

FAMILY HISTORY: Currently noncontributory.

PHYSICAL EXAMINATION:
GENERAL: This is an alert white male in no acute distress.
VITAL SIGNS: Temperature 98, heart rate 47, respiratory rate 10, blood pressure range is 138/91 to 119/85.
HEENT: Unremarkable.
NECK: Carotid upstrokes brisk without bruits. No jugular venous distention.
LUNGS: Clear to auscultation.
CARDIAC: Reveals an irregular rhythm, S1, S2. No significant lift or thrill.

ABDOMEN: Soft, nontender. Active bowel sounds.
EXTREMITIES: No cyanosis, clubbing or edema.
SKIN: Warm and dry.

DIAGNOSTICS: A 12-lead EKG atrial fibrillation with slow ventricular response. Troponins negative x3. INR is 1.9. Chest x-ray no evidence of acute disease. Urinalysis is negative. Sodium 141, potassium 3.5, glucose 207, ALT and AST slightly elevated at 48 and 43. Total cholesterol 189, triglycerides 222, LDL is 116.

IMPRESSION AND PLAN: Intermittent atrial fibrillation. Patient currently on amiodarone 200 twice daily as well as Coumadin. He is currently without complaints of dizziness or nausea. Will plan to discharge home today with followup with Dr. Henrdicks in the next week.

Encounter info:	R0826701727, Richland, OBR-Observation, 09/23/08 - 09/24/08

* Final Report *

Discharge Summary (Verified)

ATTENDING PHYSICIAN: William H. Richardson, MD

ADMITTING DIAGNOSES:
1. Dizziness.
2. Recurrent atrial fibrillation.
3. Nausea, resolved.

DISCHARGE DIAGNOSES:
1. Recurrent atrial fibrillation, now resolved.
2. Coumadin therapy.
3. Brief dizziness, likely related to recurrent atrial fibrillation.
4. Nausea, resolved.

PROCEDURES: Included admission to the Chest Pain Unit with serial cardiac enzymes which were negative times 3. The patient's INR was 1.7. The electrocardiogram showed some atrial fibrillation, and he became rate-controlled throughout his stay in the Chest Pain Unit. This morning, his heart rate was in the 50s. His blood pressure had been in the 120s to 130s systolic over 80s to 90s diastolic throughout the night.

The patient had an evaluation by Dr. Ben Jones of Columbia Heart Clinic on the morning of 09/24/2008. The patient's symptoms had resolved entirely. Dr. Jones agreed that this was a recurrent episode of atrial fibrillation and that he was already on Coumadin and amiodarone. He did not want to do any dose changes of his amiodarone right now, as he was already on the high end of dosing for this. He has cleared the patient for discharge, since he has 3 sets of cardiac enzymes that are negative and he is entirely asymptomatic at this time. He never had any chest pain. It has

been more of an issue of some dizziness with recurrent episodes of atrial fibrillation.

HOSPITAL COURSE: The hospital course is as above.

DISPOSITION: The patient is going to follow with Dr. C.W. Hendricks next week at Columbia Heart Clinic.

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 59 SEX: M ACCOUNT:
SSN:

3/21/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing well from the cardiovascular point of view. He has really had no more vertigo-type symptoms which were associated with atrial fibrillation. He has had no other problems by way of chest pain, syndrome, shortness of breath or other complaint. He has been getting along quite well, but has developed a rash with target lesions in the right triceps area and in the left lower quadrant of his abdomen. He has had no diffuse rash and has not changed any of his medications. He is seen at this time doing well from a cardiovascular point of view having recently been hospitalized at Lexington Medical Center for atrial fibrillation which responded to amiodarone therapy.

CURRENT MEDICATIONS: Amiodarone 200 p.o. b.i.d., Vasotec 5 mg daily, Coumadin as directed and one baby aspirin daily.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other blood loss. He has had no syncope, no palpitations and has had no other major problems from the standpoint of his cardiovascular situation.

He has had no fevers, night sweats or chills but has had itching in the aforementioned focal target rash.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 140/80. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation; S1 and S2 is normal with a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG is within normal limits with a normal sinus rhythm.

DIAGNOSTIC IMPRESSION:
1. Atrial fibrillation - stable on Coumadin and amiodarone.
2. Hypertension - reasonably well controlled.
3. Allergic reaction - likely Vasotec though not a diffuse rash.
4. Vertigo - probably related to #1 above.

RECOMMENDATIONS: He is advised to stop his Vasotec and will need to be seen back in 2-3 weeks or p.r.n. and to call if symptoms do not improve. Over-the-counter hydrocortisone cream % can be applied to the two focal areas of abnormality and he will be rechecked if this does not improve. Otherwise, he is to continue on the amiodarone and Coumadin and the latter may be stopped if no additional dysrhythmia occurs. He is to call if problems arise in the interim.

PATIENT: Alvin L. Menie
DOB: AGE: 59 SEX: M ACCOUNT: SSN:

4/10/2003 C W. HENDRICKS MD
OFFICE NOTE
DICTATED BY: JULIE E. MASSEY, RN, ACNP

PROBLEM LIST:
1. Cardiac.
   a) New onset atrial fibrillation 3/04/03 - now in sinus rhythm on amiodarone and Coumadin.
   b) Echocardiogram 3/03 with left atrial enlargement at 5 cm with slight left ventricular dilatation and normal systolic performance with an ejection fraction of 64% with incidental tricuspid insufficiency and modest pulmonary hypertension.
2. Hypertension - medications adjusted today.
3. ALLERGY TO VASOTEC - causes rash.

CLINICAL SUMMARY: The patient comes in today for a three week follow-up. He was last seen on 3/21/03 for hospital follow-up and had developed a rash thought related to Vasotec. The Vasotec was stopped and his rash has almost completely disappeared. Blood pressure however is back up in the 150s over 90s range so I did add some HCTZ today as it is probable that his developed high blood pressure was the cause of his new onset atrial fib. By EKG today, he is currently in sinus rhythm. He is on amiodarone 200 mg q.d. as well as Coumadin and we are going to have a pro time checked today. All in all he has been getting along quite well. He tried to instigate an exercise regime for weight loss but with the weather being so bad lately he has not been able to get out quite as much.

CURRENT MEDICATIONS: Amiodarone 200 mg q.d., Coumadin as directed and a baby aspirin q.d. I did add HCTZ 25 mg q.d. today.

PHYSICAL EXAM: GENERAL: He is awake alert and oriented. VITAL SIGNS: Blood pressure is 150/90. Pulse is 74 and regular. Weight is 310 lbs. CARDIAC: S1, S2 without murmur, gallop, rub or click. Peripheral pulses are palpable. There is no JVD, peripheral edema, carotid bruits or femoral bruits. LUNGS: Lung sounds are clear bilaterally. ABDOMEN: Soft, nontender, nondistended with no palpable masses and bowel sounds are present x4.

ASSESSMENT AND PLAN: Overall stable cardiovascular status with atrial fibrillation that has resolved. We will continue his current dose of amiodarone and Coumadin and get his pro time checked today. His blood pressure is on the high side since his Vasotec needed to be stopped so I have added HCTZ 25 mg p.o. q.d. today. We are going to plan to see the patient back in three months and sooner if need be.

PATIENT: Alvin L. Menie
DOB: AGE: 60 SEX: M ACCOUNT:
SSN:

7/02/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing fairly well. He has had no palpitations, syncope, angina or unusual shortness of breath. All things considered, he is having no important cardiovascular symptoms in the face of atrial fibrillation on amiodarone and Coumadin. He had his Vasotec stopped because of a major allergic reaction and is seen today in routine follow-up.

CURRENT MEDICATIONS: HCTZ 125 mg daily, Coumadin 5 mg as directed, amiodarone 200 daily, Bextra 20 daily and saw palmetto.

REVIEW OF SYSTEMS: No fever, night sweats, chills, weight loss, edema, orthopnea, paroxysmal nocturnal dyspnea, GI, GU, ENT or other bleeding. No palpitations. The rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 160/80. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation. S1 and S2 is normal. There is a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Protuberant but free of masses, organomegaly or bruit. Femoral pulses are full. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG shows normal sinus rhythm with normal complexes and intervals.

IMPRESSION:
1. Atrial fibrillation - controlled:
   a) Coumadin and amiodarone.
2. Hypertension - suboptimal.
3. Obesity.

RECOMMENDATIONS: At this point, Toprol-XL 25 mg to increase to 50 if needed will be added for blood pressure control and he checks his pressure fairly often and he will report the results pending review of his blood pressures at home. He is to continue follow-up with Dr. Brearley and here in three months.

PATIENT: Alvin L. Menie ACCOUNT:
DOB: AGE: 60 SEX: M SSN:

10/27/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing quite well. He has really had no important chest pain or dyspnea, no syncope or palpitations though he does get significant orthostasis after being placed on Cozaar as he was intolerant of Norvasc and Toprol. He may have also had true allergic reactions to the latter drugs mentioned above. He has been on the Atkin's diet and has lost from 304 to 266 and in this time frame his blood pressures have been dramatically better. He is seen today in routine follow-up on amiodarone and Coumadin.

MEDICATIONS: HCTZ 25 mg q.d., Coumadin 5 mg as directed, amiodarone 200 mg q.d., Bextra 20 mg q.d. as well as saw palmetto and now Cozaar of an uncertain dose.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other bleeding. No fevers, night sweats or chills but has lost weight on an intention basis. He has had no myalgias, arthralgias, nausea, vomiting or diarrhea and the rest of the review is negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure was 132/82 seated and standing. GENERAL: He is awake alert oriented and in no distress. Eyes are free of icterus and he has purple stria on the skin of his abdomen. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation. S1 and S2 were normal with a flow murmur at the apex with a perfectly regular rhythm. There was no gallop or rub. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses full. EXTREMITIES: Free of edema but brawny induration of both pretibial regions. Distal pulses are normal.

IMPRESSION:

1. Atrial fibrillation - controlled in clinical sinus rhythm.
   a) Coumadin and amiodarone.
2. Hypertension - better controlled.
3. Obesity - significant weight loss on Atkin's diet with improvement in blood pressure as well.

RECOMMENDATIONS: At this point he will be seen back in three months or p.r.n. on same medications and at that time will discuss the possibility of stopping his Coumadin although I believe amiodarone will need to be maintained. If he has any recurrence of dysrhythmia however, he will need to stay on both drugs.

PATIENT: Alvin L. Menie ACCOUNT:
DOB: AGE: 60 SEX: M SSN:

2/18/2004 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing quite well. He says that he is under a lot of additional stress at work as one of his coworkers has had major surgery and he has had to help out with this, but in independent of this he has had no particular palpitations and certainly no syncope, shortness of breath, chest pain, pressure, heaviness, tightness or fullness without and with effort. Generally speaking he has been getting along quite well from the cardiovascular point of view on his current medical regimen.

CURRENT MEDICATIONS: Cozaar 25 mg daily, HCTZ 25 daily, Coumadin 5 daily except for 1-1/2 on Wednesday and amiodarone 200 b.i.d.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other bleeding. No fevers, night sweats or chills. Occasional edema if he stands for long periods of time but no myalgias, arthralgias and has gained some weight back after losing a considerable amount on the Atkins diet. The rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 160/80 - most home blood pressures have been satisfactory, however. GENERAL: Awake, cooperative, oriented and in no apparently distress. HEENT: Eyes are free of icterus; EOMI. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpitation. S1 and S2 normal. There is a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruits. EXTREMITIES: Trace to 1+ edema.

LABORATORY: EKG shows a normal sinus rhythm with essentially normal complexes and intervals.

DIAGNOSTIC IMPRESSION:

1. Atrial fibrillation - no recurrence in one year.
   a) Chronic amiodarone and Coumadin.
2. Hypertension - generally well controlled.
3. Obesity - some weight reduction and now recurrence.

RECOMMENDATIONS: At this point, he will be seen back in 6 months with a stress Cardiolite which has not been done to this point. He is at risk for his hypertension and prior fibrillation and on the basis of this he will have further recommendations pending results of his stress Cardiolite. At the same time, I have advised him to stop his Coumadin but to let me known if current palpitations recur as he may well need to have Coumadin reinstituted. With his larger body mass, I believe that he should remain on a b.i.d. amiodarone dose.

OFFICE NOTE

HISTORY: The patient returns today doing well. He once again uses the word fantastic to describe how he feels and this is in face of persistent atrial dysrhythmia where at last office visit we stopped his amiodarone and kept him on Coumadin. He has not been aware of any palpitations, syncope or near syncope and all things considered, has been getting along quite well from a cardiovascular point of view. He is seen today in routine follow-up in the face of having recently stopped his amiodarone.

MEDICATIONS: Unchanged from the note of 06/01/2006 except for amiodarone is no longer in place.

REVIEW OF SYSTEMS: No gastrointestinal, genitourinary, ENT or other bleeding or easy bruisability. No fever, night sweats, chills, myalgias, arthralgias, edema, orthopnea, paroxysmal nocturnal dyspnea, sustained palpitations and the rest of the review is negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure 130/70. GENERAL: Patient is awake, alert, cooperative and oriented in no apparent distress. HEENT: Eyes are free of icterus and EOMI. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A & P. CARDIAC: Rhythm is irregularly irregular, rate in the 70s. Precordium is quiet to palpitations. S1 and S2 normal. There was a flow murmur at the mid left sternal border, Without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. PULSES: Femoral pulses are full without bruit. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG shows atrial flutter with 2-3:1 conduction and a heart rate of 130 beats per minute.

IMPRESSION:

1. Atrial flutter fib-persistent.
    a. Previous amiodarone plus Coumadin-Coumadin alone.
2. Hypertension.
3. Sleep apnea-treated.

DISPOSITION: At this point I have asked him to have a 24-hour Holter monitor and return in 3 months via phone follow up. The issue is whether he may be having an incessant tachycardia that could prove myocardiopathic or at the outside chance that he could have overt sick sinus syndrome. He is otherwise asymptomatic and I do not see him as a candidate for any type of ablation or other similar therapies. He is to call if symptoms develop in the interim.

SSN:

OFFICE NOTE

HISTORY: The returns today doing "fantastic." Before he answered I had already looked at his EKG and questioned him carefully about fatigue, dizziness, syncope, weakness, palpitations and other, and he insists that could not be doing any better. From the standpoint of his overall cardiovascular point of view he is having no important symptoms at this time and generally speaking is at ad lib activity with no major problems. He has long-standing history of sleep apnea and hypertension and previously symptomatic atrial fibrillation on long-term antiarrhythmic and anticoagulant therapy.

CURRENT MEDICATIONS: Hydrochlorothiazide 25 daily, amiodarone 200 b.i.d., Cozaar 25 daily, Coumadin 5 as directed, Zyrtec D if needed, Multivites, fish oil, propranolol 20 t.i.d., Atarax and Viagra as well as CPAP.

REVIEW OF SYSTEMS: No gastrointestinal, genitourinary, ENT or other bleeding or easy bruisability. No fever, night sweats, chills, myalgias, arthralgias, edema, orthopnea, paroxysmal nocturnal dyspnea, sustained palpitations and the rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 130/78. GENERAL: He is awake, alert, cooperative and oriented in no apparent distress. HEENT: Eyes are free of icterus and EOMI. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpitation. An irregular irregular rhythm with a flow murmur, but no click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. PULSES: Femoral pulses are full without bruit. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG shows atrial fibrillation with controlled ventricular response.

IMPRESSION:

1. Atrial fibrillation - asymptomatic at this time.
    a. Amiodarone and Coumadin.
2. Hypertension.
3. Sleep apnea.

DISPOSITION: A long discussion was carried out with the patient regarding his options. At this point absent symptoms and on Coumadin with atrial fib and controlled ventricular response the continuation of amiodarone as a failed antiarrhythmic makes no sense with outcome data actually supporting rate control with anticoagulation rather than strict rhythm control in the face of no symptoms. On this basis I have advised him to stop his amiodarone and I will see him back in 6 weeks with an EKG. He is to call if symptoms intensify such as palpitations and the like.

AGE: 64Y SEX: M

CHART ID:
ACCOUNT:
SSN:

OFFICE NOTE

HISTORY: The patient is a 64-year-old is here today with no important cardiovascular complaints. Specifically, in the face of paroxysmal atrial fibrillation and left ventricular hypertrophy with chronic hypertension he has had no additional problems of shortness of breath, vertigo or other symptoms outlined in the note of 8/29/07 generated after an Emergency Department visit where transient atrial fibrillation was noted with hemodynamic compromise as a possible subsequent event. He was on Coumadin at the time and has been placed on Amiodarone and has had no recurrent symptoms and all things considered feels generally well.

CURRENT MEDICATIONS: Hydrochlorothiazide 25 daily, Cozaar 20 daily, Coumadin 5 as directed, Zyrtec D if needed, fish oil, propanolol 20 mg daily (for tremor), Viagra if needed and CPAP at night and Amiodarone 200 mg p.o. b.i.d.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. No visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. No coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or purities. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalangeal swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 130/72. GENERAL: The patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. CARDIAC EXAM: Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

LABORATORY DATA: Echocardiogram shows mild left atrial enlargement at 4.5 cm – probably normal for body surface index and concentric left ventricular hypertrophy with normal systolic performance and mild pulmonary hypertension at 39 mmHg.

IMPRESSION:

1. Atrial fibrillation – stable and on Coumadin and Amiodarone.
   a. No recurrent symptoms.
   b. History of vertigo – possibly related to number one above or others.
2. Sleep apnea.
3. Hypertension – controlled.
   a. Left ventricular hypertrophy on echo with normal left ventricular systolic performance.

D:09/26/2007 13:14:22

PATIENT: ALVIN L MENIE
DOB:
DOS: 08/29/2007

AGE: 64Y SEX: M

CHART ID:
ACCOUNT:
SSN:

OFFICE NOTE

HISTORY: The patient is here today after recent Lexington Medical Center visit because of what could be an episode of unadulterated vertigo. He describes a sensation of headache in the posterior part of his head from his ears back, a sort of staring sensation, the room spinning and then intense nausea and vomiting with associated dizziness. He went to the emergency room where he apparently was not out of rhythm and was observed having symptoms and was told this was vertigo without any hearing deficient or other problem associated. This is akin to symptoms he has had in the past when he was in atrial fibrillation with rapid ventricular response but at this point at least under the ER observation, was not associated with dysrhythmia. This episode outside from no palpitations however his very similar to those episodes that he has had in the past.

CURRENT MEDICATIONS: Hydrochlorothiazide 25 daily, Cozaar 20 daily, Coumadin 5 as directed, Zyrtec D if needed, fish oil, propanolol 20 mg daily (for tremor), Viagra if needed and CPAP at night.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. No visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. No coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or purities. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalangeal swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 130/70 even with a normal size cuff. GENERAL: The patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. CARDIAC EXAM: Rhythm is irregular irregular. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

LABORATORY DATA:

- All reviewed from Lexington Medical Center ER visit. CTs, et cetera all benign.
- Today, EKG shows atrial fibrillation with somewhat rapid ventricular response – asymptomatic.

IMPRESSION:

1. Vertigo – Ménière's disease versus other, accounting for recent hospital visit.
   a. Could not exclude precipitating transient atrial fibrillation with rapid ventricular response.
2. Recurrent atrial fibrillation – on Coumadin but off amiodarone.
3. Sleep apnea – on therapy.
4. Hypertension – controlled.

D:08/30/2007 06:54:58
T:09/01/2007 21:14:07
178586

RECOMMENDATIONS: At this point, he will be placed back on amiodarone 200 p.o. b.i.d. with a PT and INR in one week in the face of amio-Coumadin interaction. In addition to this, he will be seen back in one month with repeat EKG and an echocardiogram and call if problems develop in the interim. I believe it will be important to maintain sinus rhythm if by chance his continued episodes are those of symptomatic atrial fibrillation [illegible] other etiologies as listed above may need to be considered and this will be deferred to his primary attending physician.

OFFICE NOTE

HISTORY: The patient returns today doing well. He has really had no chest pain or shortness of breath unless he had any problems with syncope or palpitations and when he was here last time was in atrial fib with a fairly rapid ventricular response but without any awareness. He is seen today again asymptomatic in the face of known paroxysmal atrial fibrillation on chronic Coumadin.

CURRENT MEDICATIONS: Hydrochlorothiazide 25 daily. Cozaar 25 every other day. Coumadin 5 as directed. Zyrtec as needed. Fish oil. Propranolol 20 daily. Viagra. CPAP.

REVIEW OF SYSTEMS: No gastrointestinal, genitourinary, ENT or other bleeding or easy bruisability. No fever, night sweats, chills, myalgias, arthralgias, edema, orthopnea, paroxysmal nocturnal dyspnea, unexplained palpitations and the rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 130/70 with a normal size cuff. GENERAL: Patient is awake, alert, cooperative and oriented in no apparent distress. HEENT: Eyes are free of icterus and EOMI. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A & P. CARDIAC: Precordium is quiet to palpitations. S1 and S2 normal. There was a flow murmur at the mid left sternal border without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. PULSES: Femoral pulses are full without bruit. EXTREMITIES: Edema 1+.

LABORATORY DATA: EKG shows normal sinus rhythm with normal complexes and intervals and normal tracing with slight left axis.

IMPRESSION:

1. Paroxysmal atrial fibrillation—normal sinus rhythm at the current time.
   a. Asymptomatic.
   b. Prior amiodarone therapy.
   c. Chronic Coumadin therapy.
2. Sleep apnea with CPAP therapy.
3. Hypertension—controlled.

RECOMMENDATIONS: At this point, he will be seen back in 6 months or p.r.n. and if he is aware of palpitations or rapid heart action or any other significant issue, he can call for further advice.

OFFICE NOTE

HISTORY: The patient returns today doing pretty well. At his request he saw Dr. McCotter who felt a conservative posture in the absence of symptoms and controlled ventricular response in the face of chronic atrial fibrillation was appropriate. Accordingly, no additional foray in to more aggressive arena will be undertaken unless symptoms driven. He has had atrial fibrillation off and on for a number of years and now this appears to be "fixed" with no ongoing symptoms and certainly he has had no chest pain, shortness of breath, or other concerns and all things considered is getting along well at this time. He was told by Dr. McCotter that his atrial fibrillation was related to hypertension, age, and his increased weight. All things considered, he is near asymptomatic from the cardiac point of view. He has had negative stress testing in the past and no evidence of sick sinus syndrome.

CURRENT MEDICATIONS: HCTZ 25 mg daily, Cozaar 50 mg daily, Coumadin 5 mg as directed, Propanolol 20 mg t.i.d., Viagra if needed, Crestor, Zyrtec, fish oil, multivitamins, Antivert, Meclozine, Lyrica, and is going to start Flomax.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. The patient has had no visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. The patient has had no coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or pruritis. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalange swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 140/80. GENERAL: The patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. CARDIAC EXAM: Rhythm is irregularly/irregular. Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

IMPRESSION:

1. Atrial fibrillation – asymptomatic.
    a. Status-post EP consultation – conservative posture recommended.
    b. No evidence of sick sinus syndrome.
    c. Chronic Coumadin therapy without complications.
2. Hypertension.
3. Sleep apnea.
4. Complex medical regimen.

CONSULTATION

REFERRING PHYSICIAN: Dr. C. W. Hendricks.

REASON FOR THIS CONSULTATION: Paroxysmal at times persistent atrial fibrillation.

HISTORY OF PRESENT ILLNESS: This is a 65-year-old patient with a history of ongoing atrial fibrillation that is asymptomatic and has been refractory to Amiodarone. He has had a couple of episodes where he has extreme dizziness with headaches. He says these symptoms are made better with closing his eyes. The dizziness at times has been so severe that he has actually had nausea and vomiting. He has been admitted and worked up. He felt that these episodes have nothing to do with any cardiac etiology and it appears to be possibly inner ear related. Patient however felt that it may be caused by his atrial fibrillation and presented for an atrial fibrillation consult for further evaluation.

PAST MEDICAL HISTORY: Significant for:

1. Paroxysmal at times persistent atrial fibrillation that has been refractory to the use of Amiodarone.
2. Hypertension.
3. Sleep apnea.
4. Chronic nerve pain.

ALLERGIES: Sulfa.

SOCIAL HISTORY: No alcohol. No tobacco use.

FAMILY HISTORY: Negative for early CAD.

REVIEW OF SYSTEMS: Negative. CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EENT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, wheeze, otherwise see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits, cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mood status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: None. All other systems negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 104/66, heart rate 75. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are nonlabored. CARDIAC: The PMI is nondisplaced. No lifts/thrills. S1 and S2 normal. There were no murmurs, rubs, or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Feet and

D:11/02/2008 19:19:16
T:11/03/2008 08:54:53
278880

pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. [redacted]nous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sens[redacted]ficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOS[redacted]TAL: Normal muscular strength and tone is noted.

DIAGNOSTIC STUDIES: EKG shows atrial fibrillation, heart rate 75 bpm.

Review of Holter monitor from Dr. Hendricks showed that his atrial fibrillation was well-control[redacted] an average heart rate of 59 bpm, maximum 93 and minimum of 50. No significant tachycardic or bradycard[redacted]nts.

ASSESSMENT AND PLAN:

1. Dizziness with episodes of nausea and vomiting. These instances most likely have no relatio[redacted] to the patient's atrial fibrillation as the patient is in atrial fibrillation day of the office visit with he[redacted] that are well-controlled and no symptoms. I cannot find any type of relationship to his possib[redacted] ear disturbance to his AFib. The only fleeting possibility would be a possible transischemic at[redacted]om a thromboembolic event but the patient at this time is on Coumadin therapy and has been [redacted]utic. Therefore no further therapy is needed at this time. If another event does occur, we will rec[redacted]d an MRI to look for any evidence of micro thromboembolic events.
2. Persistent atrial fibrillation. I agree with Dr. Hendricks' plan. I can add no further therapies at t[redacted]. His rates are controlled. He is asymptomatic and he is on thromboembolic therapy, Coumadin. [redacted] no change to his current medical regimen and agree 100% with Dr. Hendricks' ongoing plan.

FOLLOW-UP/PLAN: I will see the patient back on an as needed patient. He will follow up with Dr. H[redacted] in approximately one month's time.

CRAIG J. MCCOTTER, MD

SSN:

OFFICE NOTE

HISTORY: The patient returns today with no important cardiovascular symptoms though he did have an "attack" prompting a chest pain unit visit which was worked out to not be a cardiac event though he was in atrial fibrillation but without rapid ventricular response. This centers around a vestibular or equilibrium type problem and just now he has had no recurrence of this and has had no syncope or other and is here today near asymptomatic save this one episode which appears to be related to additional work stress and situation provocation.

CURRENT MEDICATIONS: Unchanged from the listing of July 8, 2008 except he takes Antivert and a nausea pill on a p.r.n. basis and Amiodarone 200 mg b.i.d. since last seen.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. The patient has had no visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. The patient has had no coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or pruritis. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalange swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 130/80. GENERAL: The patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. CARDIAC EXAM: Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

LABORATORY DATA: Electrocardiogram shows atrial fibrillation with controlled ventricular response.

IMPRESSION:

1. Atrial fibrillation – asymptomatic and refractory to Amiodarone.
    a. No hemodynamic compromise.
    b. No syncope.
2. Hypertension.
3. Sleep apnea.
4. Complex medical regimen.

RECOMMENDATIONS: At this point we discussed at length various options, the one that I preferred was to leave him on Coumadin, discontinue his Amiodarone, and basically follow him along. He was interested in pursuing this with Dr. Craig McCotter which I think is reasonable and I have referred for a consultation to see if

D:10/03/2008 17:19:00
T:10/12/2008 17:49:28
271673

additional studies beyond what I suggest might be appropriate. Nonetheless, I think the Amiodarone can be stopped and I cautioned him about the change in his coagulation profile absent Amiodarone and this will be taken into account

OFFICE NOTE

HISTORY: The patient returns today with no important cardiovascular symptoms. Specifically, he has had no chest pain, shortness of breath, palpitations, or other concerns, and has had no trouble with his increase of Amiodarone anticipating a facilitated cardioversion. He returns today with no important issues, and findings considered, is near asymptomatic from the cardiac respective with an EKG – reporting lab early – that shows normal sinus rhythm so that the cardioversion aspect of this has been accomplished.

CURRENT MEDICATIONS: Unchanged from the July 8, 2008 note except for the Amiodarone 200 mg b.i.d.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. The patient has had no visual disturbance, blurred vision or other, and no hearing problems, epistaxis or throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. The patient has had no coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematemesis or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitations and no rashes or pruritis. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalange swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 140/80. GENERAL: The patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements intact. ENT: Unremarkable. CARDIAC EXAM: Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

LABORATORY DATA: EKG shows normal sinus rhythm with normal complexes and intervals and relative sinus bradycardia.

IMPRESSION:

1. Normal sinus rhythm – intermittent paroxysmal atrial fibrillation – controlled on high dose of Amiodarone.
    a. Asymptomatic either way.
2. Hypertension.
3. Sleep apnea.
4. Complex medical regimen.

RECOMMENDATIONS: At this point I believe that he has declared himself as one who hopefully can be managed long term medically for this. Since he is asymptomatic, whether in atrial fibrillation or not, chronic Coumadin will be in his armamentarium but if the return of atrial fibrillation should occur I believe rate

D:09/05/2008 09:50:29
T:09/06/2008 10:52:40
263965

control with cessation of Amiodarone would be appropriate and when I see him back in three months if rhythm is still stable then we will cut his Amiodarone to 200 mg a day. Continue to follow-up with Dr. Carter.

OFFICE NOTE

HISTORY: The patient returns today doing okay. He has had no chest pain, syncope, palpitations, maybe some effort fatigue and dyspnea but this would not seem out of character for him and his body habitus independent of heart rhythm. His 24-hour Holter monitor showed predominantly atrial fibrillation but during the end of the tape he was back in sinus rhythm but remarks that he felt no differently at anytime during that 24-hour period, suggesting that sinus rhythm may not given him any particular advantage from the symptom standpoint.

CURRENT MEDICATIONS: Hydrochlorothiazide 25 daily, amiodarone 200 daily, Cozaar 50 daily, Coumadin as directed, propanolol 20 t.i.d. and Viagra if needed, Zyrtec, fish oil, multivitamins.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. No visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. No coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or pruritus. There has been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalangeal swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 142/82. GENERAL: Patient is awake, alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. There was no thyromegaly or adenopathy. CARDIAC EXAM: Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. EXTREMITIES: Free of edema with no cyanosis or clubbing or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and no other abnormalities are identified.

LABORATORY DATA:

- EKG shows atrial fibrillation with controlled to slow ventricular response.

IMPRESSION:

1. Atrial fibrillation – probably asymptomatic.
   a. Some effort fatigue and dyspnea.
   b. Prior fairly aggressive protocol to get him in rhythm and now failure on amiodarone.
2. Hypertension, controlled.
3. Sleep apnea.
4. Complex medical regimen to include Coumadin.

D:07/08/2008 11:32:49
T:07/11/2008 15:21:33
248884

RECOMMENDATIONS: At this point, he will be seen back in six weeks and we have decided to try to get him back in rhythm at least one more time. This may need to be done by a facilitated cardioversion and I am recommending to him to have his amiodarone increased to b.i.d. and at six weeks, if he is in atrial fibrillation will set him up for an outpatient cardioversion. I do not anticipate going through a complex algorithm to get him in rhythm or keep him there as it is questionable as to whether he is symptomatic and certainly I do not believe he needs more aggressive measures just at this point.

OFFICE NOTE

HISTORY: The patient returns today with no important cardiovascular symptoms or complaints. He [illegible] that at times his heart may be out of rhythm and he checks his pulse and cannot be sure, but day to day [illegible] has no important problems with palpitations or other concerns and, all things considered, is getting along very well from the cardiovascular point of view. He has had no angina, unusual dyspnea and certainly no syncope [illegible] palpitations. This is on the backdrop of chronic atrial fibrillation that to date has been reasonably well [illegible] with Amiodarone and Coumadin amongst other medications.

CURRENT MEDICATIONS: HCTZ 25 daily, Amiodarone 200 daily, Cozaar 50 daily, Coumadin 5 [illegible], Propranolol 20 t.i.d., Viagra as needed, Zyrtec b.i.d., fish oil and multivitamins.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite [illegible]. The patient has had no visual disturbance, blurred vision or other, and no hearing problems, epistaxis or [illegible] throat. There has been no chest pain, pressure, heaviness, or tightness, dyspnea, edema or orthopnea. The patient has had no coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitations and no rashes or pruritus. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalangeal swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 150/82. GENERAL: The patient is [illegible], alert, cooperative, and oriented in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. There was no thyromegaly or adenopathy. CARDIAC EXAM: Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. EXTREMITIES: Free of edema with no cyanosis or clubbing or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymoses or other, and there is no tremor, palsy, or other paresis finding. SKIN: Dry with no excessive perspiration and other abnormalities are identified.

LABORATORY DATA: EKG shows atrial fibrillation with relatively slow rate and one 1.8 second pause.

IMPRESSION:

1. Atrial fibrillation – probably persistent at this point.
   a. No essential symptoms.
   b. Relative slow rates.
2. Hypertension.
3. Complex medical regimen.
4. Negative screening for coronary disease in the past.
5. Sleep apnea.

D:06/02/2008 17:16:41
T:06/05/2008 16:58:43
241454

DISPOSITION: At this point he will have a 24-hour Holter monitor and I will see him back in a couple of months with phone follow up regarding his Holter. If he does not have any bouts of sinus rhythm, given the degree of difficulty in getting him in sinus rhythm years ago – as well as maintaining it – he probably can be treated by rate control and anticoagulation only. He is okay with this idea and, of course, with the bradycardia potential, sick sinus syndrome looms in the background and this will also be explored by his Holter.

OFFICE NOTE

HISTORY: The patient returns today with no important cardiovascular symptoms or complaints. He has had no significant chest pain or shortness of breath, nor has he had any troubles with awareness of rapid heart action and this is in the face of now being left in atrial fibrillation with rate control and chronic Coumadin therapy.

CURRENT MEDICATIONS: As listed.

REVIEW OF SYSTEMS: Patient has had no fever, night sweats, chills, weight loss or appetite change. The patient has had no visual disturbance, blurred vision or other, and no hearing problems, epistaxis or sore throat. The patient has had no coughs, sputum production or other shortness of breath. There has been no abdominal pain, hematochezia or melena. No GU bleeding, dysuria or other. There have been no myalgias, arthralgias or physical limitation and no rashes or pruritus. There have been no headaches, seizures, paresthesias or other. No depression or other changes. There has been no polydipsia, polyuria or excessive sweating. No petechiae, phalangeal swelling, photosensitivity or other. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 118/74. GENERAL: The patient is awake, alert, cooperative, in no apparent distress. EYES: Free of icterus and extraocular movements are intact. ENT: Unremarkable. CARDIAC EXAM: Rhythm is irregularly irregular. Remarkable for a precordium that is quiet to palpation. S1 and S2 were normal with a flow murmur at the left sternal border without gallop or rub. LUNGS: Clear to A&P. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruit. MUSCULOSKELETAL EXAM: Shows no joint swelling or deformity. INTEGUMENT: Unremarkable with reference to rash, ecchymosis, or other, and there is no tremor, palsy, or other paresis finding. NEURO: Oriented x3.

IMPRESSION:

1. Atrial fibrillation with good rate control and no symptoms.
   a. Chronic Coumadin therapy.
2. Hypertension.
3. Sleep apnea.
4. Complex medical regimen.

RECOMMENDATIONS: At this point he will be seen back in 6 months or p.r.n. with no change in recommendations or studies, and if things were going poorly he can call at any time, and continue follow-up with Dr. Carter.

OFFICE NOTE

HISTORY: The patient returns today doing pretty well. He has had no important chest pain or shortness of breath beyond his baseline and has had no syncope or other cardiac awareness and certainly no symptoms to suggest cardiac ischemia or other important issue. All things considered, he is getting along pretty well with prior negative screening for coronary disease but recurrent issues with atrial fibrillation.

CURRENT MEDICATIONS: As listed.

GENERAL REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EARS, NOSE, MOUTH AND THROAT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, sneeze; otherwise, see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits. Cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems are negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 134/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The rhythm is irregularly irregular. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is 1-2+ edema with brawny induration (history of cellulitis in both lower extremities); no cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: EKG shows atrial fibrillation with generally controlled ventricular response - on Coumadin.

RECOMMENDATIONS: At this point, I am adding Lasix 40 mg Monday, Wednesday and Friday q.p.m. to reduce the swelling in the lower extremities for the reason that he has had breakdown with swelling and cellulitis where I believe preventive measures in terms of his edema should be undertaken. As well, I have advised him that rate and not rhythm control for his atrial would serve him well and that no change in medications or procedure will be offered at this time, but he certainly can call if problems develop. He will be seen back in a couple of months with a BMP and if things are not going well he can be seen at any time. Continue follow up with Dr. Carter.

PATIENT: ALVIN L MENIE
DOB:
DOS: 11/04/2010

AGE: 67Y SEX: M

CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY: The patient returns today doing pretty well. He had an uneventful heart catheterization which surprisingly revealed no evidence of coronary disease, but in the face of a negative stress study, but progressive symptoms in a patient at high risk for obstructive problems. He had a superficial bruise at his catheterization site, but no major problems in terms of drainage, fevers, swelling or other and was incidentally noted to have MRSA from a derriere wound. He has had no syncope or palpitations in the face of a sick sinus syndrome that almost became overt while on beta blockers for chronic tremor and these have been discontinued with substitute therapy.

CURRENT MEDICATIONS: As listed.

REVIEW OF SYSTEMS: As noted above. CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EENT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, wheeze, otherwise see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits, cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure is 130/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are nonlabored. CARDIAC: Irregularly/irregular rhythm. The PMI is nondisplaced. No lifts/thrills. S1 and S2 normal. There were no murmurs, rubs, or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is trace edema. No cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: EKG reveals atrial flutter with no change from prior tracings and good rate control.

IMPRESSION:

1. Atrial fibrillation - as part of sick sinus syndrome, but asymptomatic.
    a. Chronic Coumadin.
2. Chest pain - noncardiac.
    a. Normal catheterization.
3. Sleep apnea.
4. Adult onset diabetes mellitus.
5. Hyperlipidemia.

D:11/04/2010 09:32:50
T:11/11/2010 07:58:47
477843

6. MRSA.
7. Complex medical regimen.

RECOMMENDATIONS: At this point he will be seen back in 3 months or p.r.n. and if stable then 6 month basis. He is cautioned about syncope or near syncope and if these things should occur he is to call office. On top of this if he needs beta blockers for tremor or other or if his rate becomes an issue on the fast pacemaker therapy would be indicated.

PATIENT: ALVIN L MENIE
DOB:
DOS: 10/07/2010

AGE: 67Y SEX: M

CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY OF PRESENT ILLNESS: Patient returns today doing pretty well. He continues to have some chest discomfort that is not effort-related, somewhat atypical, but bothersome overall from the original prescription which could be cardiac ischemic. That said, he had a negative stress nuclear study and certainly no typical anginal symptoms in the face of a multi-positive risk factor profile for coronary disease.

He is seen today in conjunction with a repeat Holter monitor off beta blockers and he had no pauses - frequent 2.5 to 3-second pauses beta blockers previously - but he has heart rates frequently in the 160 range now, consistent with sick sinus syndrome. Moreover, his beta blocker therapy - partly for rate control and partly for tremor - was important to him in terms of being able to write and function, which is no longer a situation that is working for him. That said, he has had no major change in symptoms but overall new data suggesting a more aggressive approach should be undertaken overall.

CURRENT MEDICATIONS: As listed.

REVIEW OF SYSTEMS: As per the history above. CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. ENT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, wheeze, otherwise see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits, cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure is 140/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal, normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are nonlabored. CARDIOVASCULAR: Rhythm is irregular-irregular. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGICAL EXAM: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: Holter as discussed.

IMPRESSION:

1. Sick sinus syndrome - classic tachybrady.
    a. 3-second pauses alternating with rates of 160 off beta blockers.

D:10/07/2010 12:20:37
T:10/12/2010 11:06:27
470628

2. Chronic tremor and neurologic mild dysfunction - optimized by beta blockers, now withheld and return of symptoms.
3. Ongoing recurrent chest pain in a multi-positive risk factor profile.
4. Sleep apnea.
5. Adult onset diabetes mellitus.
6. Chronic complex medical therapy.

RECOMMENDATIONS: At this point, he is very likely going to need a pacemaker in order to be able to safely take beta blockers. Prior to any of this, however, I am setting him up for a cardiac catheterization with coronary angiography with possible PCI with the procedure, indications, and risks (death, stroke, myocardial infarction, arterial, and urgent bypass surgery for failed intervention) and risk/benefit ratio being outlined. He is to stop his Coumadin 5 days ahead of time and start on a baby aspirin with this and to take no metformin the night before or day of the procedure. He is willing to proceed.

DOS: 09/07/2010 AGE: 67Y SEX: M CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY: The patient returns doing okay. Basically, he has had no syncope or palpitations, but a Holter showing fairly significant pauses while on relatively low dose propranolol which I have advised him to stop. A list of the discussion was carried out regarding Agent Orange exposure and arrhythmia issues as well as ischemic heart disease issues and these I have pursued by way of "Google" and though the VA recommends are not completely listed, these are deferred to "other sources" for pursuit. I have advised him, however, that ischemic was not documented by me in terms of a recent stress study prompted by chest pain, which has been atypical primarily at rest - and relatively low grade. The atrial fibrillation part of his problem is clearly related to Agent Orange as far as I could discern, but at the same time, he seems to think that the VA Administrator Farmington County has more information and certainly I will defer this.

CURRENT MEDICATIONS: Unchanged from the note of August 20, 2010, except the history above.

REVIEW OF SYSTEMS: Unchanged from the note of August 20, 2010, except for the history above. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 140/68. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations unlabored. CARDIAC: The PMI is nondisplaced, no lifts/thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect and mood. MUSCULOSKELETAL: Normal muscular strength and tone are noted.

IMPRESSION:

1. Atrial fibrillation with occult sick sinus syndrome - aggravated by propranolol.
   a. Nocturnal 3 second pauses without symptoms.
2. Negative screening for coronary disease with recent chest pain syndrome.
   a. To be pursued further with recurrent symptoms.
3. Sleep apnea.
4. Adult onset diabetes mellitus.
5. Complex medical regimen.

RECOMMENDATIONS: At this point, I will see him back in one month with a Holter one week prior to his visit after he stops the propranolol. The propranolol apparently was given because of benign tremor and it is not anticipated that stopping this will cause any significant issues though certainly he is cautioned about returning pain or other problems which will be addressed should this occur.

MRN:
SSN:

OFFICE NOTE

HISTORY OF PRESENT ILLNESS: Patient returns today for further evaluation of a chest pain syndrome that he says today may be worse when he is in his lounge chair in a certain position and certainly no effort symptoms. This evaluation is in conjunction with a nuclear stress test that showed no ischemia and normal left ventricular performance and, accordingly, no reason to pursue further the symptoms of chest pain that he has recently had. On top of this, he had a Holter that showed heart rates in the high 30s, frequent 2.6 to 2.8 second pauses and one 3.2 second pause at 3:00 in the morning. This clearly points to a sick sinus syndrome and, were the pause not in the middle of the night, the threshold would be met for pacemaker therapy and this is likely coming his way in the near future anyway. Accordingly, I will see him back in 6 weeks and have cautioned him about any syncope or near syncope and further recommendations will be offered pending review of his circumstance when he returns. There were 15 minutes of this interview spent discussing with him the nuclear stress study, its implications, and the Holter results.

MRN:
SSN:

OFFICE NOTE

HISTORY OF PRESENT ILLNESS: Patient returns doing suboptimally. In the last couple of weeks he has had a left parasternal pain that occurs at rest - sometimes associated with palpitations - and occurring especially when he is in his lounge chair. He feels like he is having somewhat of a gas buildup, but none of these symptoms are effort-related on the other hand. He has had a negative screening for coronary disease and on this background he has had several episodes of sweats and awareness of some rapid heart action and one episode of near loss of consciousness, raising the issue of sick sinus syndrome. He has taken Antivert for some of the dizzy spells, but for palpitations raise the issue of a cardiovascular etiology.

CURRENT MEDICATIONS: As listed - complex extensive list.

REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. ENT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, wheeze, otherwise see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits, cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure is 132/80. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal, normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are nonlabored. CARDIOVASCULAR: Rhythm is irregular-irregular. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGICAL EXAM: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

IMPRESSION:

1. Presumed sick sinus syndrome with episodes consistent with bradyarrhythmia - to be uncovered.
    a. Long-standing atrial fibrillation with generally good rate control.
2. Negative screening in the past for coronary disease, but now onset of atypical but bothersome chest pain.
3. Sleep apnea.
4. Adult onset diabetes mellitus.
5. Complex medical regimen.

D:08/20/2010 15:50:52
T:08/25/2010 11:33:34
457442

RECOMMENDATIONS: At this point he will be seen back in one week with a Holter to be placed today and a Persantine nuclear stress study next week. Further recommendations will be offered pending review of this data, but certainly more aggressive measures will be undertaken if clinically indicated.

OFFICE NOTE

HISTORY: The patient returns today doing pretty well. He has had no important chest pain or shortness of breath and, all things considered, has had no important cardiovascular complaints. Specifically, he has had no syncope, palpitations, chest pain or unusual dyspnea, though he is relatively sedentary in the face of sciatica and back pain. His overall situation is one of chronic atrial fibrillation with good rate control and anticoagulation with prior antiarrhythmic offerings failing to maintain sinus rhythm over a long period of time.

CURRENT MEDICATIONS: As listed.

GENERAL REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EARS, NOSE, MOUTH AND THROAT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, sneeze; otherwise, see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits. Cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems are negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 130/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The rhythm is irregularly irregular. The PMI is nondisplaced, no lifts or thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is trace to 1+ bilateral lower extremity edema; no cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA:

- EKG shows atrial fibrillation with generally controlled ventricular response.
- BMP this visit is unremarkable.

IMPRESSION:

1. Atrial fibrillation stable.
   a. Rate control.
   b. Chronic Coumadin therapy.
   c. No symptoms of sick sinus syndrome.
2. Sciatica - significant weight gain over and above baseline.
3. Sleep apnea.

D:04/23/2010 06:30:18
T:04/24/2010 23:52:27
427554

4. Adult onset diabetes mellitus - now on therapy.
5. Complex medical regimen.

RECOMMENDATIONS: At this point he will be seen back in 6 months or p.r.n. and no change in his regimen. He can call if problems develop in the interim and continue followup with Dr. Carter. As it turns out he had been given a prescription for metformin on a number of occasions but never had this filled until his last visit with Dr. Carter.

OFFICE NOTE

HISTORY: The patient returns today doing very well. He has really has had no important chest pain, shortness of breath. No limitation on his activity and no syncope or near syncope in the face of an occult sick sinus syndrome with bradycardia that is relieved by discontinuing some of his negative chronotropic medicines. Thus, he is pretty much at ad lib activity with no important problems and all this on the backdrop of a surprisingly normal cath.

CURRENT MEDICATIONS: As listed.

GENERAL REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EARS, NOSE, MOUTH AND THROAT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, sneeze; otherwise, see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits. Cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems are negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 110/70. EYES: Conjunctivae and sclerae normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The PMI is nondisplaced, no lifts or thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect and mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: None today.

IMPRESSION:

1. Sick sinus syndrome - atrial fibrillation with intermittent 3 second pauses - pauses resolved with medicine changes.
2. Obstructive sleep apnea.
3. Chronic atrial fibrillation.
4. Adult also diabetes mellitus.
5. Hypertension.
6. Hyperlipidemia.
7. Complex medical regimen.

D:02/03/2011 11:26:12
T:02/08/2011 14:20:13
499260

RECOMMENDATIONS: At this point, he will be seen back in 6 months or p.r.n. with no change in strategies and of course he can be seen at any time if problems develop or concern heightens.

AGE: 68Y SEX: M

CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY: The patient returns doing okay. He has had no major cardiovascular symptoms, but says he has fallen twice - not syncope - and blames part of this on the use of Clonazepam. This apparently has made him drowsy at times and he is taking it once a day and has been placed on phentermine for weight loss, and is being followed for this by Dr. Carter. He has been "reading up" on his symptoms and has come to the conclusion that he may have Parkinson's disease and apparently has filed a claim for this and is seeing a neurologist. This is on the backdrop of the of chronic atrial fibrillation with occult sick sinus syndrome that at this point is asymptomatic.

CURRENT MEDICATIONS: As listed.

GENERAL REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EARS, NOSE, MOUTH AND THROAT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, sneeze; otherwise, see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits. Cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems are negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 120/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The PMI is nondisplaced, no lifts or thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: EKG shows atrial flutter with generally controlled ventricular response with one Ashman's beat.

IMPRESSION:

1. Chronic atrial fibrillation - occult sick sinus syndrome with chronic Coumadin therapy.
   a. No indication for pacemaker just now.
2. Sleep apnea.
3. Adult onset diabetes mellitus.
4. Hypertension.
5. Hyperlipidemia.

D:08/06/2011 05:59:46
T:08/09/2011 00:14:37
548726

6. Falling spells of uncertain significance - neuro evaluation pending.

RECOMMENDATIONS: At this point he will be seen back in 6 months or p.r.n. with no additional cardiovascular studies. There is no evidence of coronary disease, normal left ventricular performance overall, and most of his issues currently are being addressed by Dr. Carter.

PSYCHOLOGICAL EVALUATION

I. Identifying Data

Name: Alvin Loyd Menie

Address:

Telephone: (Home)

Age: 60

Date of Birth:

Sex: Male

Marital Status:

Children:

Education: BS/Economics/Northeast University of Oklahoma

Occupation: Premium Auditor/State Accident Fund

Nature of Injury: Stress-Related Arrhythmia

Date of Injury: March 3, 2003

Attorney: None

Employer: State Accident Fund/14 years

Dates of Evaluation: 06-17-03; 07-16-03

II. Reason for Referral

Alvin Menie is a 60 year old white male who was referred for a psychological evaluation by Ms. Vicki Powell with Compendium Services, Inc. According to some reports received, this gentleman had recently experienced a cardiac problem, which he felt was due to stress on the job. There was also some concern as to whether any other factors

might have played a role so an evaluation was requested to investigate his complaint and form an opinion about the etiology of his condition and any need for treatment.

III. Dates of Contact

06-17-03	4.50 hours	Clinical Interview and MMPI-2 testing, Alvin Menie Behavioral Observations of Alvin Menie
07-16-03	2.50 hours	Clinical Interview and PAI testing, Alvin Menie Behavioral Observations of Alvin Menie Review of Documents

IV. Qualifications

Dr. Selman Watson is a licensed clinical psychologist who maintains a forensic practice at 1720 Main Street in Columbia, South Carolina. In addition to this role, he is also a senior member of the psychology service at G. Werber Bryan Psychiatric Hospital, a 280 bed acute care inpatient facility where he has logged over 25 years. Dr. Watson, during his career, has performed over 200 personal injury evaluations with an eye toward identifying any malingering or deception a claimant might bring to the process. He also is well versed in the disorders that arise from a work-related injury and has offered expert witness testimony in a variety of legal settings.

V. Sources of Information

Clinical Interviews (2) of Alvin Menie
MMPI-2/PAI testing of Alvin Menie
Behavioral Observations of Alvin Menie
Review of Documents including Authorization for Treatment
and Recent Work Schedule

VI. Background Information

Alvin Menie is a 60 year old white male who has been an employee of the State Accident Fund for 14 years. According to his report, he experienced some cardiac problems on the job last spring and tied it to a workload that had tripled following the loss of two other auditors during an especially busy time of the year. Mr. Menie noted, for example, that a colleague named Carla went out on medical leave on December 27th for surgery and three days later saw the departure of Shawn who took a position with a different state agency. This turn of events he said subsequently left him with the bulk of the work to do that involved managing close to 530 accounts. Serving to make things worse, Mr. Menie disclosed there

had been a sizable increase in premiums levied for workers comp insurance to municipals, cities, and counties which resulted in a lot of complaints or phone calls seeking an explanation. It was not unusual he insisted for him consequently to work a lot of overtime including some days that might stretch to 9:00 p.m. trying to contact individuals by phone who were unavailable during normal hours. Gathering information from agencies with aircraft, Mr. Menie added, proved to be especially time consuming since premiums would often have to be adjusted for these customers. Overtime work, on the other hand, was said to not be new to him as a veteran employee who had a habit of leaving the job after others had already gone home.

On March 3, 2003, Mr. Menie reported that he had spent a typical day at the agency and left around 6:00 p.m. He could not recall any symptoms prior to this moment including any feelings of nervousness or anxiety and attributed it to his style being a bit laid back wherein he seldom gets emotionally worked up or overly excited about even stressful things. Mr. Menie indicated his condition, however, deteriorated that evening when he became very dizzy while watching television. Upon waking up his wife, he began to sweat and stumbled to the bathroom to try and deal with some unrelenting nausea. Mr. Menie said that an ambulance was summoned some time later, which transported him to the Lexington Medical Center with an oxygen mask in place. It was determined that his blood pressure and heart rate were quite elevated so he was assigned to a room and put under Dr. Hendrix's care. With the use of medications, Mr. Menie reported that they were able to correct the "defibrillation" and return his heart to a more normal rate and rhythm. He said that he learned from this provider that stress was probably the culprit and talked about having noticed in the past his right hand sometimes trembling or quivering. Apparently, this symptom had little meaning to him at the time as did the strong, involuntary blinking of his right eye which he also had never experienced as a problem. Mr. Menie, upon further reflection, then referenced a new software system at work by noting they couldn't amend or revise programs without the assistance of IBM personnel. In his mind, it served to create a lot of delays and slow down any progress that might have been made.

Finally, Mr. Menie stipulated that he owns no psychiatric history and knows of no relatives who have ever been treated for an emotional disorder. His legal record was also said to be clean with no incidents of ever having been arrested or jailed and he denied experiencing any problems with his anger or any history of having assaulted others. In regards to his home life, Mr. Menie described his marriage as quite stable without any undue financial burdens and no responsibility for caring for a relative. His physical health was also said to be unremarkable except for the coronary issue and he reportedly is not a consumer of alcohol or drugs and has

never received treatment for any addiction. Mr. Menie concluded with the disclosure that he has had no recurring problems with his heart since March and pronounced his mood as sound with no disturbance in his sleep or appetite functions.

VII. Behavioral Observations

Alvin Menie is a 60 year old white male who is somewhat portly in his build. He has gray hair as expected for one his age and a ruddy complexion indicative of a person who might prefer the outdoors. With no tie and his shirt unbuttoned at the neck, Mr. Menie seemed the epitome of comfort and not a man who would readily alter his laidback style.

This subject arrived for each session in a prompt manner and greeted the examiner on both occasions in a cordial way. He showed no reluctance to respond to inquiries and would even elaborate on his replies if a request was made. Mr. Menie gave the impression of having a good grasp on what had happened to him and could recall with great clarity the events that had taken place. From this presentation, it seemed clear that his coronary condition had not negatively affected his memory and held little likelihood that it would interfere with his job. Mr. Menie, moreover, did not express a lot of concern about himself and did not appear overly rattled by his experience. There were no strong fluctuations noted in his mood and his speech maintained an even tempo with no interruption or pressure. His thinking also seemed well organized and linear with respect to its direction or sequential flow.

On the psychometric instruments, Mr. Menie took a very deliberate approach being careful to mark his responses. He needed a lot of time as a result to complete a task but never allowed this to compromise his effort. Mr. Menie was also not averse to asking questions if an item seemed unclear and remained quite cooperative throughout the process despite his sense that he felt fine and saw little need for the tests.

VIII. Test Results

Mr. Menie's response to the MMPI-2 produced a defensive profile that describes a man who is vulnerable to developing physical symptoms in response to stress. The most typical complaint is one of pain usually located in the extremities but seldom are they incapacitated to the point of being disabled. On the contrary, these individuals are often found to continue functioning albeit at a reduced level of efficiency and prefer medical explanations to psychological factors in order to be seen as normal, responsible, and free of problems. It is precisely their strong

grip on emotionally-charged material that leads to their physical pathology rather than expressing their feelings as they arise. Mr. Menie and others like him consequently are fearful of being judged and have a strong need to be seen as cheerful, content, and "brave in the face of any pain". They also tend to resent having their mind probed and for this reason do not make particularly good candidates for any psychotherapy.

Finally, persons with this codetype can secure some secondary gain by emphasizing their discomfort. This may take the form of attention, affection, or sympathy and in the workplace include avoiding some responsibilities or assigning them to others. Noticeably absent from Mr. Menie's record is any evidence of an underlying depression and his pattern of scores do not highlight any significant pathology in his personality.

PAI data collected on Mr. Menie showed his validity and clinical scales to all be within normal limits. At present, he is not considered to be anxious or depressed and there are no additional scale elevations that point to any problem in his character. Indices measuring drug and alcohol use are also quite low.

IX. Conclusions and Recommendations

1. Alvin Menie is a 60 year old white male who appears to have suffered a cardiac arrhythmia from an accumulation of stress on the job. Data from the MMPI-2 in fact describe him as a man with a strong tendency to utilize a lot of depression and denial in order to avoid dealing with emotionally laden issues. Rather than express his negative thoughts and feelings as they arise, Mr. Menie instead keeps them at bay so others will continue to view him as normal and responsible without any fault. His high need for social approval is partly to blame and invariably accounts for the difficulty he experiences in trying to share anything that might be considered distasteful. Persons like Mr. Menie also tend to organize their lives around ideals of service to family, friends, or the community and perceive any psychological imbalance as a sign of weakness. For this reason, they seldom talk about their troubles or problems but project a positive, almost cheerful manner despite the circumstance that might exist.

2. Any treatment options for Mr. Menie should include some assertiveness training to help him learn the value of expressing his feelings, particularly the negative ones. Therapy could also help him recognize any anger, stress, or sadness as it builds before it is converted to or becomes a somatic problem that requires the attention of a medical professional. While Mr.

Menie is considered a genuinely caring individual, he needs to understand his body's response to anxiety and find better ways to manage it in the future. Regular aerobic activity is often quite useful in this regard but is no substitute for facing any issues or material that might be emotionally charged.

X. Diagnostic Impression

Axis I:	Adjustment Disorder with Anxiety: 309.24
Axis II:	Deferred
Axis III:	Cardiac Arrhythmia
Axis IV:	Heavy Workload
Axis V:	GAF70

STATE ACCIDENT FUND

Irvin D. Parker
Director

INTERAGENCY MEMORADUM

TO: Alvin Menie, Auditor RGF

FROM: Ruby G. Flateau, Manager of Administrative Services

DATE: April 15, 2003

SUBJECT: Performance Pay Increase

We recognize that during the past year you have played and continue to play a key role in collecting the revenue and conducting premium audits. You helped to keep these essential functions going throughout a period of transition caused by staff turnover and other extraordinary circumstances. You will receive a pay increase in the amount of **$3,022 (7.5%)** raising your annual salary from $40,306 to **$43,328**. This increase will become effective April 17, 2003 and will reflect on your May 16, 2003 payroll check. Congratulations and continue the good work!

Cc: Ross Gamble, Deputy Director
Human Resources File

Approved by: Ross R. Gamble

STATE ACCIDENT FUND

Irvin D. Parker, Director

Dear Policyholder,

Effective January 1, 2003 rates increased an average of 24.7%. This is the first base rate increase since 1996 and it will vary somewhat for each agency depending on the mix of job classifications in the agency.

By statute, the State Accident Fund's worker's compensation rates must be set at a level that will neither create a deficit nor produce a profit from operations.

As has been true nationally, the severity of the average worker's compensation claim has increased markedly in recent years. Since 1999 our average medical costs have increased 44%. Average indemnity costs have increased 52% since then.

If your agency has a drug free policy you may be eligible for the 5% drug free credit. Application for the premium credit for the 2002/2003 fiscal year must be submitted along with the Actual Payroll Report.* Re-certification is required each year and must be submitted along with your Actual Payroll Report before the credit can be applied. Note that the requirement for random testing of all persons is no longer required. Testing may be included for pre-employment, post accident, and/or high risk or safety sensitive positions at your discretion.

If your agency's 2003/2004 FY Estimated Payroll, used to determine estimated premium, does not agree with your 2003/2004 budget, then please place your estimated payroll for each classification code to the left of the Estimated Payroll on your Estimated Statement that came along with the invoice. We will revise the Estimated Premium prior to payment, if you submit your estimated payroll to SAF no later than July 1, 2003.

* A self-certification, "Application for Drug and Alcohol Free Workplace Premium Credit", form is attached.

If you have any questions regarding the above, please feel free to contact me.

Sincerely,

A.L. Menie
Sr. Premium Auditor

STATE OF SOUTH CAROLINA

BEFORE THE SOUTH CAROLINA WORKERS' COMPENSATION COMMISSION

WCC FILE NO.: 0307461

Alvin L. Menie, *Claimant,* vs. State Accident Fund, *Employer,* *Carrier,* *Defendant.*	AFFIDAVIT OF STEVE FLOWERS

Personally appeared before me, Steve Flowers, who on oath states and deposes:

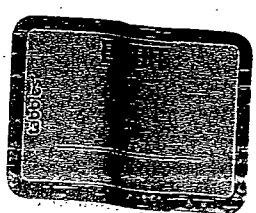

1. He is an employee of the State Accident Fund's MIS Department and was asked to compile certain of the materials requested by the Claimant's subpoena.

2. With respect to item # 1 requested in the subpoena ("Any and all documents regarding incoming phone calls to [the Claimant] at phone number (803) 896-5854"), no log or list of incoming calls is maintained by the State Accident Fund.

3. With respect to item # 3 requested in the subpoena ("The number of audits requested and completed for twelve months prior to the date of incident to include the month of March, 2003"), my research has determined that 939 audits were requested and completed from February 1, 2002, through March 31, 2003.

Further the Affiant sayeth not.

Steve Flowers
STEVE FLOWERS

SWORN to before me this 5th day of December, 2005

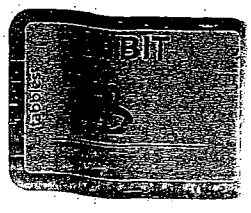

Notary Public for the State of South Carolina (L.S.)

My Commission Expires: July 5, 2006

Success Criteria:	

ACTUAL PERFORMANCE

PERFORMANCE CHARACTERISTICS	Acceptable/ Unacceptable
1. Characteristic: Planning and organizing.	A
Definition: Establishes a course of action for meeting agency objectives and plans; develops schedules for activities and projects.	
2. Characteristic: Judgment.	A
Definition: Makes realistic and rational decisions; seeks advice and input of team members, employers, and other appropriate sources.	
3. Characteristic: Dependability.	A
Definition: Can be relied upon to fulfill State Accident Fund – Policyholder Services goals and objectives.	

SUMMARY AND IMPROVEMENT PLAN

Identify the employee's major accomplishments, areas needing improvement, and steps to improve present and future performance.

Al is to be commended for the personal initiative he took during late 2002 and early 2003, a time when he voluntarily took on extra duties while we were short two premium auditors, to make sure that all policy transactions were completed on a timely basis. During this same time he continued to make every effort to delight all customers needing assistance.

PRE-HEARING BRIEF

WCC File No: 0307461

Claimant's Name: **Alvin Menie**
Address:
City: State: Zip:
Home Phone: Work Phone: ( ) -
Preparer's Name: **Andrew E. Haselden / Howser, Newman & Besley, LLC**

Employer's Name: **State Accident Fund**
Address: **P.O. Box 102100**
City: **Columbia** State: **SC** Zip: **29221**
Carrier: **State Accident Fund**
Preparer's Phone #: **(877) 216-6970**

A claim for workers' compensation benefits is made based on the following grounds:

■ Injury ☐ Illness ☐ Repetitive Trauma

1. Compensation Rate: **$516.77** 2. AWW: **$775.11** **Date of Injury:** **3/3/03 *(ALLEGED)***
3. Type of injury and body part(s): **Alleged heart condition caused by on the job stress**
4. Facts in controversy: **(1) Whether the Claimant sustained compensable stress related heart attack within the course and scope of his employment with the Defendant/Employer; (2) whether Claimant is entitled to any benefits under the Act**
5. Legal issues involved: **See number 4 above; applicability of the doctrine of laches**
6. Unusual aspects: ***SEE ATTACHED ADDENDUM****
7. Witnesses (designate if expert):* **(1) Ross Gamble; (2) Kirk Adair; (3) Theresa Simmons; (4) Gerald Murphy; (5) other representatives of the Defendants; (6) Claimant; and (7) any witnesses identified or called by the Claimant**
8. Exhibits: ***SEE ATTACHED ADDENDUM****
9. Medical evidence (indicate report pursuant to R.67-612; deposition or appearance): **See APA submissions**
10. Name, address, and specialty, if any, of the treating physician: **Not applicable**
11. Impairment rating(s); body part(s); physician and date of opinion: **Not applicable**
12. I am amending my Form 50/51 in the following manner: **Defendants assert the doctrine of laches as a complete defense to this claim**

I verify the contents of this form are accurate and true to the best of my knowledge.

Signature:

Email: **ahaselden@hnblaw.com**

Date of hearing: **January 30, 2012**

Time needed for hearing: ***2 HOURS****

On behalf of ☐ Claimant ■ Employer

File this form and proof of service on the opposing party according to R.67-611 and R.67-212. Do not send medical reports.
* Commissioners reserve the right to admit expert witnesses at hearings.

ADDENDUM TO FORM 58 / PRE-HEARING BRIEF

6. Unusual Aspects	A. In the event that Claimant submits the deposition of Dr. C.W. Hendricks (July 6, 2011), Defendants request that their objections made during the deposition be heard prior to the hearing in this matter or in some manner prior to a decision in this case being rendered. The objections appear on the following pages of the deposition: • 36; • 38; • 40; • 41; • 42; • 43 (twice); • 44; • 45 (twice); and • 46 (three times). B. Per the "Affidavit of Counsel" submitted as an Exhibit in this matter, Claimant owes the Defendants $216.38 in copying charges.
8. Exhibits	A. Affidavit of Counsel B. Article / *CardioSmart: Atrial Fibrillation* C. Personal Locator Forms for Claimant (1/1/02-3/31-03) D. Monthly Timesheets for Carla Johnson (1/1/03-3/31/03) E. Monthly Timesheets for Carla Johnson (1/1/02-8/31/04) F. Request for Leave Forms (2/28/02-9/3/04)

EMERGENCY DEPARTMENT NOTE

PATIENT: MENIE, ALVIN L
LOCATION: H3P1 311
ADM. #:
M.R. #:
ADMITTED: March 04, 2003
D: 03/03/2003
DISCHARGED:
T: 03/04/2003 9:35 AM /lms
PHYSICIAN: V SCOTT CARROLL, MD
SSN:

CHIEF COMPLAINT: "I feel dizzy."

HISTORY OF THE PRESENT ILLNESS: The patient is a 59-year-old who presents to the Emergency Department with acute onset of dizziness tonight which he describes the room as spinning. He has had associated diaphoresis profusely. He has also been vomiting. Denies any headache, tinnitus, visual changes, chest pain, shortness of breath, or any symptoms consistent with angina other than his diaphoresis and vomiting. He has had no headache.

PAST MEDICAL HISTORY: He has been diagnosed with vertigo in the past and has actually taken ( ) in the past for this. He also has a history of cellulitis and he has obstructive sleep apnea for which he is on CPAP.

ALLERGIES: None known.

PHYSICAL EXAM: VITAL SIGNS: Temperature 97, pulse 103 and irregular, blood pressure 145/94. Oxygen saturation 99%. Respirations 18. GENERAL: Very pale White male, his shirt is wet from diaphoresis. HEENT: Pupils equal, round, and reactive to light. Serous effusions bilaterally. Oropharynx clear. NECK: Supple. NEUROLOGIC: Positive Hall-Pike and in fact began having dry heaves after the Hall-Pike test. LUNGS: Clear. CARDIOVASCULAR: Irregularly irregular rhythm. No appreciable murmur or rub was noted. ABDOMEN: Soft, nontender. EXTREMITIES: Warm. Can move all extremities without difficulty. SKIN: Moist to touch.

MEDICAL DECISION MAKING: A 59-year-old who presents with vertiginous symptoms however, he also has an irregularly irregular pulse with no history of atrial fibrillation.

DIAGNOSTIC STUDIES: EKG reveals atrial fibrillation without obvious signs of ischemia. Cardiac enzymes negative. CT scan of the brain negative. Chest x-ray no congestive failure. CBC normal WBCs 11,000 and he does have a left shift. CMET shows a CO2 that is low at 20 with anion gap 16.

EMERGENCY DEPARTMENT COURSE: TREATMENT: Given 500 cc bolus of saline and Phenergan 25 mg IV. Also placed him on 5 mcg of nitroglycerin.

DIAGNOSIS(ES):
1. New onset atrial fibrillation.
2. Vertiginous symptoms most likely vertigo benign positional possibly anginal equivalent.

DISPOSITION: Due to his diaphoresis and vomiting and his new onset atrial fibrillation I have consulted with cardiology, Dr. Alexander was here in the Emergency Department and saw the patient and is admitting him to PCU for further evaluation. The patient is currently stable and is feeling improved after his Phenergan and IV fluids.

HISTORY & PHYSICAL

PATIENT: MENIE, ALVIN L	**LOCATION:** H3P1
ADM. #: H00011860152	**M.R. #:**
ADMITTED: March 04, 2003	**D:** 03/03/2003
DISCHARGED:	**T:** 03/04/2003 10:26 AM /tsg
PHYSICIAN: M DONALD ALEXANDER, MD	**SSN:**

HISTORY OF THE PRESENT ILLNESS: This patient is a 59-year-old gentleman with a longstanding history of sleep apnea using CPAP. He has also had a history of chronic lower extremity venous insufficiency with a history of cellulitis. He otherwise has been in fairly good health according to he and his family.

The patient had an acute onset of vertigo this evening associated with significant nausea, diaphoresis and vomiting. He was extremely weak. Due to these problems he was brought to the emergency department at Lexington where he was noted to be in atrial fibrillation. The patient has no prior known history of cardiac problems. No history of arrhythmia. He has had no similar episodes to his present illness.

He has not had any chest pain consistent with angina and he has not had any overt symptoms of congestive heart failure. Due to the new onset atrial fibrillation a cardiology consultation was kindly requested. The patient did undergo a noncontrasted CT of the head, which by report is normal.

REVIEW OF SYSTEMS: The patient does have a history of allergies and has had some congestion in his ears last week for which he took some ear drops. He has not had any fever, chills, or sore throat. He denies any blurred vision or lateralizing neurological signs. He denies any dysphagia. He has not had any particular chest pain or shortness of breath, but he does have chronic sleep apnea. He is obese. He denies any abdominal pain or history of peptic ulcer disease. He does admit to chronic lower extremity edema and a history of cellulitis in his left lower extremity.

CURRENT HOME MEDICATIONS: Allegra and Antivert.

ALLERGIES: None known.

PHYSICAL EXAMINATION:
VITAL SIGNS: Blood pressure 130/90, pulse 90/irregular.
GENERALLY: Obese, pleasant in no acute distress; however, when he moves his head he becomes profoundly nauseated.
NECK: Preserved carotid upstroke without bruits. No neck vein distention. No thyromegaly.
LUNGS: Clear to percussion and auscultation.
CARDIOVASCULAR: Irregular rhythm without detectable murmur. No gallop.
ABDOMEN: Morbidly obese without definite mass, organomegaly or tenderness. Bowel sounds are normal and no abdominal bruits. Femoral pulses are 1+ and lower extremity pulses are diminished.
LOWER EXTREMITIES: Revealed chronic brawny changes with 2+ lower extremity edema at the ankles.

DISCHARGE SUMMARY

PATIENT: MENIE, ALVIN L	**LOCATION:** DISCHARGED
ADM. #: H00011860152	**M.R. #:**
ADMITTED: March 04, 2003	**D:** 03/07/2003
DISCHARGED: March 07, 2003	**T:** 03/07/2003 5:49 PM /alb
PHYSICIAN: CHARLES W HENDRICKS, MD	**SSN:**
DICTATED BY: JULIE MASSEY, ACNP	

DISCHARGE DIAGNOSIS(ES):
1. New onset atrial fibrillation.
2. Hypertension.
3. Obesity.
4. Dizziness.

PROCEDURE(S) PERFORMED:
1. Echocardiogram.
   a) Left atrial enlargement at 5 cm.
   b) Slight ventricular dilatation with normal systolic performance and EF 64%.
   c) Incidental tricuspid insufficiency with modest pulmonary hypertension.

HOSPITAL COURSE: This is a 59-year-old white male who was admitted on 03/03/03 with dizziness and new onset atrial fibrillation with rapid ventricular rate. He was admitted to the PCU for cardiac monitoring, where his cardiac enzymes were negative. He was put on Lovenox. CT of the brain was negative with the exception of some benign calcification in the basal ganglia bilaterally. Free T4 and TSH were within normal limits. He was started on amiodarone 200 mg p.o. b.i.d., and Vasotec 5 mg p.o. q.d. for hypertension. On 03/06/03, which was the expected date of discharge, he had converted back into atrial fibrillation. We increased his amiodarone and started him on Coumadin. This morning he is back in sinus rhythm, ambulating independently, having no problems, and his blood pressure is improved. Will plan to send him home today on his current medications, have him get his PT checked on Monday morning in our office, and then follow up with Dr. Hendricks in the next 2 weeks. We will complete Coumadin teaching today before he leaves as well.

DISCHARGE PHYSICAL EXAMINATION:
GENERAL: Awake, alert and oriented, ambulating independently without problems.
VITAL SIGNS: Temperature 97.4, heart rate 70/regular, respirations 20/even and unlabored, BP 120/70.
CARDIOVASCULAR: S1 and S2 without murmur, rub, gallop or click. Peripheral pulses are palpable. There is no JVD, peripheral edema, carotid bruits or femoral bruits.
LUNGS: Clear bilaterally.
ABDOMEN: Soft, nontender, obese. No palpable masses. Bowel sounds are present x4.

DIAGNOSTIC STUDIES: PT 14.3, INR 1.12, PTT 31.5. Free T4 0.9, TSH 0.57. CBC within normal limits. CMET within normal limits. Cardiac enzymes negative.

DISCHARGE MEDICATIONS:

1. Amiodarone 400 mg p.o. b.i.d. for the next 2 days and then decrease to 200 mg p.o. b.i.d.
2. Coumadin 5 mg p.o. q.h.s. and as directed by our clinic.
3. Vasotec 5 mg p.o. q.d.
4. Baby aspirin 1 p.o. q.d.

DISPOSITION: Will discharge him home today. He will have his Coumadin level checked in our clinic on Monday morning. I have contacted the Coumadin Clinic so they are aware of him. He will follow up with Dr. Hendricks in our office in the next week and a half to 2 weeks with an EKG and certainly sooner if need be. He will have Coumadin teaching completed, which I have already started. He knows to be careful with bleeding precautions. If he has problems with dizziness in the future on the amiodarone and in sinus rhythm, we may investigate an ENT consult as an outpatient.

5

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 59 SEX: M ACCOUNT:
SSN:

3/21/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing well from the cardiovascular point of view. He has really had no more vertigo-type symptoms which were associated with atrial fibrillation. He has had no other problems by way of chest pain, syndrome, shortness of breath or other complaint. He has been getting along quite well, but has developed a rash with target lesions in the right triceps area and in the left lower quadrant of his abdomen. He has had no diffuse rash and has not changed any of his medications. He is seen at this time doing well from a cardiovascular point of view having recently been hospitalized at Lexington Medical Center for atrial fibrillation which responded to amiodarone therapy.

CURRENT MEDICATIONS: Amiodarone 200 p.o. b.i.d., Vasotec 5 mg daily, Coumadin as directed and one baby aspirin daily.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other blood loss. He has had no syncope, no palpitations and has had no other major problems from the standpoint of his cardiovascular situation.

He has had no fevers, night sweats or chills but has had itching in the aforementioned focal target rash.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 140/80. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation; S1 and S2 is normal with a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. Pemoral pulses are full without bruit. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG is within normal limits with a normal sinus rhythm.

DIAGNOSTIC IMPRESSION:
1. Atrial fibrillation - stable on Coumadin and amiodarone.
2. Hypertension - reasonably well controlled.
3. Allergic reaction - likely Vasotec though not a diffuse rash.
4. Vertigo - probably related to #1 above.

RECOMMENDATIONS: He is advised to stop his Vasotec and will need to be seen back in 2-3 weeks or p.r.n. and to call if symptoms do not improve. Over-the-counter hydrocortisone cream % can be applied to the two focal areas of abnormality and he will be rechecked if this does not improve. Otherwise, he is to continue on the amiodarone and Coumadin and the latter may be stopped if no additional dysrhythmia occurs. He is to call if problems arise in the interim.

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 59 SEX: M ACCOUNT:
SSN:

4/10/2003 C W. HENDRICKS MD
OFFICE NOTE
DICTATED BY: JULIE E. MASSEY, RN, ACNP

PROBLEM LIST:
1. Cardiac.
   a) New onset atrial fibrillation 3/04/03 - now in sinus rhythm on amiodarone and Coumadin.
   b) Echocardiogram 3/03 with left atrial enlargement at 5 cm with slight left ventricular dilatation and normal systolic performance with an ejection fraction of 64% with incidental tricuspid insufficiency and modest pulmonary hypertension.
2. Hypertension - medications adjusted today.
3. ALLERGY TO VASOTEC - causes rash.

CLINICAL SUMMARY: The patient comes in today for a three week follow-up. He was last seen on 3/21/03 for hospital follow-up and had developed a rash thought related to Vasotec. The Vasotec was stopped and his rash has almost completely disappeared. Blood pressure however is back up in the 150s over 90s range so I did add some HCTZ today as it is probable that his developed high blood pressure was the cause of his new onset atrial fib. By EKG today, he is currently in sinus rhythm. He is on amiodarone 200 mg q.d. as well as Coumadin and we are going to have a pro time checked today. All in all he has been getting along quite well. He tried to instigate an exercise regime for weight loss but with the weather being so bad lately he has not been able to get out quite as much.

CURRENT MEDICATIONS: Amiodarone 200 mg q.d., Coumadin as directed and a baby aspirin q.d. I did add HCTZ 25 mg q.d. today.

PHYSICAL EXAM: GENERAL: He is awake alert and oriented. VITAL SIGNS: Blood pressure is 150/90. Pulse is 74 and regular. Weight is 310 lbs. CARDIAC: S1, S2 without murmur, gallop, rub or click. Peripheral pulses are palpable. There is no JVD, peripheral edema, carotid bruits or femoral bruits. LUNGS: Lung sounds are clear bilaterally. ABDOMEN: Soft, nontender, nondistended with no palpable masses and bowel sounds are present x4.

ASSESSMENT AND PLAN: Overall stable cardiovascular status with atrial fibrillation that has resolved. We will continue his current dose of amiodarone and Coumadin and get his pro time checked today. His blood pressure is on the high side since his Vasotec needed to be stopped so I have added HCTZ 25 mg p.o. q.d. today. We are going to plan to see the patient back in three months and sooner if need be.

9

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 60 SEX: M ACCOUNT:
SSN:

7/02/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing fairly well. He has had no palpitations, syncope, angina or unusual shortness of breath. All things considered, he is having no important cardiovascular symptoms in the face of atrial fibrillation on amiodarone and Coumadin. He had his Vasotec stopped because of a major allergic reaction and is seen today in routine follow-up.

CURRENT MEDICATIONS: HCTZ 125 mg daily, Coumadin 5 mg as directed, amiodarone 200 daily, Bextra 20 daily and saw palmetto.

REVIEW OF SYSTEMS: No fever, night sweats, chills, weight loss, edema, orthopnea, paroxysmal nocturnal dyspnea, GI, GU, ENT or other bleeding. No palpitations. The rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 160/80. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation. S1 and S2 is normal. There is a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Protuberant but free of masses, organomegaly or bruit. Femoral pulses are full. EXTREMITIES: Free of edema with good distal pulses.

LABORATORY DATA: EKG shows normal sinus rhythm with normal complexes and intervals.

IMPRESSION:
1. Atrial fibrillation - controlled:
   a) Coumadin and amiodarone.
2. Hypertension - suboptimal.
3. Obesity.

RECOMMENDATIONS: At this point, Toprol-XL 25 mg to increase to 50 if needed will be added for blood pressure control and he checks his pressure fairly often and he will report the results pending review of his blood pressures at home. He is to continue follow-up with Dr. Brearley and here in three months.

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 60 SEX: M ACCOUNT:
SSN:

10/27/2003 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing quite well. He has really had no important chest pain or dyspnea, no syncope or palpitations though he does get significant orthostasis after being placed on Cozaar as he was intolerant of Norvasc and Toprol. He may have also had true allergic reactions to the latter drugs mentioned above. He has been on the Atkin's diet and has lost from 304 to 266 and in this time frame his blood pressures have been dramatically better. He is seen today in routine follow-up on amiodarone and Coumadin.

MEDICATIONS: HCTZ 25 mg q.d., Coumadin 5 mg as directed, amiodarone 200 mg q.d., Bextra 20 mg q.d. as well as saw palmetto and now Cozaar of an uncertain dose.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other bleeding. No fevers, night sweats or chills but has lost weight on an intention basis. He has had no myalgias, arthralgias, nausea, vomiting or diarrhea and the rest of the review is negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure was 132/82 seated and standing. GENERAL: He is awake alert oriented and in no distress. Eyes are free of icterus and he has purple stria on the skin of his abdomen. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpation. S1 and S2 were normal with a flow murmur at the apex with a perfectly regular rhythm. There was no gallop or rub. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses full. EXTREMITIES: Free of edema but brawny induration of both pretibial regions. Distal pulses are normal.

IMPRESSION:
1. Atrial fibrillation - controlled in clinical sinus rhythm.
   a) Coumadin and amiodarone.
2. Hypertension - better controlled.
3. Obesity - significant weight loss on Atkin's diet with improvement in blood pressure as well.

RECOMMENDATIONS: At this point he will be seen back in three months or p.r.n. on same medications and at that time will discuss the possibility of stopping his Coumadin although I believe amiodarone will need to be maintained. If he has any recurrence of dysrhythmia however, he will need to stay on both drugs.

COLUMBIA HEART CLINIC, P.A.

PATIENT: Alvin L. Menie
DOB: AGE: 60 SEX: M ACCOUNT:
SSN:

2/18/2004 C W. HENDRICKS MD

OFFICE NOTE

HISTORY: The patient returns today doing quite well. He says that he is under a lot of additional stress at work as one of his coworkers has had major surgery and he has had to help out with this, but in independent of this he has had no particular palpitations and certainly no syncope, shortness of breath, chest pain, pressure, heaviness, tightness or fullness without and with effort. Generally speaking he has been getting along quite well from the cardiovascular point of view on his current medical regimen.

CURRENT MEDICATIONS: Cozaar 25 mg daily, HCTZ 25 daily, Coumadin 5 daily except for 1-1/2 on Wednesday and amiodarone 200 b.i.d.

REVIEW OF SYSTEMS: He has had no GI, GU, ENT or other bleeding. No fevers, night sweats or chills. Occasional edema if he stands for long periods of time but no myalgias, arthralgias and has gained some weight back after losing a considerable amount on the Atkins diet. The rest of the review is negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 160/80 - most home blood pressures have been satisfactory, however. GENERAL: Awake, cooperative, oriented and in no apparently distress. HEENT: Eyes are free of icterus; EOMI. NECK: No jugular venous distention. Carotids are brisk without bruit or thrill. LUNGS: Clear to A&P. CARDIAC: Precordium is quiet to palpitation. S1 and S2 normal. There is a flow murmur at the apex without click, rub, gallop or diastolic sound. ABDOMEN: Free of masses, organomegaly or bruit. Femoral pulses are full without bruits. EXTREMITIES: Trace to 1+ edema.

LABORATORY: EKG shows a normal sinus rhythm with essentially normal complexes and intervals.

DIAGNOSTIC IMPRESSION:
1. Atrial fibrillation - no recurrence in one year.
   a) Chronic amiodarone and Coumadin.
2. Hypertension - generally well controlled.
3. Obesity - some weight reduction and now recurrence.

RECOMMENDATIONS: At this point, he will be seen back in 6 months with a stress Cardiolite which has not been done to this point. He is at risk for his hypertension and prior fibrillation and on the basis of this he will have further recommendations pending results of his stress Cardiolite. At the same time, I have advised him to stop his Coumadin but to let me known if current palpitations recur as he may well need to have Coumadin reinstituted. With his larger body mass, I believe that he should remain on a b.i.d. amiodarone dose.

DOS: 09/07/2010

AGE: 67Y SEX: M

CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY: The patient returns doing okay. Basically, he has had no syncope or palpitations, but a Holter showing fairly significant pauses while on relatively low dose propranolol which I have advised him to stop. Most of the discussion was carried out regarding Agent Orange exposure and arrhythmia issues as well as ischemic heart disease issues and these I have pursued by way of "Google" and though the VA recommendations are not completely listed, these are deferred to "other sources" for pursuit. I have advised him, however, that the ischemic was not documented by me in terms of a recent stress study prompted by chest pain, which has been a atypical primarily at rest - and relatively low grade. The atrial fibrillation part of his problem is clearly related to Agent Orange as far as I could discern, but at the same time, he seems to think that the VA Administrator for Lexington County has more information and certainly I will defer this.

CURRENT MEDICATIONS: Unchanged from the note of August 20, 2010, except the history above.

REVIEW OF SYSTEMS: Unchanged from the note of August 20, 2010, except for the history above. All other systems negative.

PHYSICAL EXAM: VITAL SIGNS: Blood pressure is 140/68. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The PMI is nondisplaced, no lifts/thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone are noted.

IMPRESSION:

1. Atrial fibrillation with occult sick sinus syndrome - aggravated by propranolol.
   a. Nocturnal 3 second pauses without symptoms.
2. Negative screening for coronary disease with recent chest pain syndrome.
   a. To be pursued further with recurrent symptoms.
3. Sleep apnea.
4. Adult onset diabetes mellitus.
5. Complex medical regimen.

RECOMMENDATIONS: At this point, I will see him back in one month with a Holter one week prior to his visit after he stops the propranolol. The propranolol apparently was given because of benign tremor and it is not anticipated that stopping this will cause any significant issues though certainly he is cautioned about worsening pain or other problems which will be addressed should this occur.

PATIENT: ALVIN L MENIE
DOB: _____
DOS: 10/07/2010

AGE: 67Y SEX: M

CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY OF PRESENT ILLNESS: Patient returns today doing pretty well. He continues to have some chest discomfort that is not effort-related, somewhat atypical, but bothersome overall from the original prescription which could be cardiac ischemic. That said, he had a negative stress nuclear study and certainly no typical anginal symptoms in the face of a multi-positive risk factor profile for coronary disease.

He is seen today in conjunction with a repeat Holter monitor off beta blockers and he had no pauses - frequent 2.5 to 3-second pauses beta blockers previously - but he has heart rates frequently in the 160 range now, consistent with sick sinus syndrome. Moreover, his beta blocker therapy - partly for rate control and partly for tremor - was important to him in terms of being able to write and function, which is no longer a situation that is working for him. That said, he has had no major change in symptoms but overall new data suggesting a more aggressive approach should be undertaken overall.

CURRENT MEDICATIONS: As listed.

REVIEW OF SYSTEMS: As per the history above. CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. ENT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, wheeze, otherwise see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits, cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure is 140/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal, normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are nonlabored. CARDIOVASCULAR: Rhythm is irregular-irregular. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGICAL EXAM: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: Holter as discussed.

IMPRESSION:

1. Sick sinus syndrome - classic tachybrady.
    a. 3-second pauses alternating with rates of 160 off beta blockers.

D:10/07/2010 12:20:37
T:10/12/2010 11:06:27
470628

16

2. Chronic tremor and neurologic mild dysfunction - optimized by beta blockers, now withheld and return of symptoms.
3. Ongoing recurrent chest pain in a multi-positive risk factor profile.
4. Sleep apnea.
5. Adult onset diabetes mellitus.
6. Chronic complex medical therapy.

RECOMMENDATIONS: At this point, he is very likely going to need a pacemaker in order to be able to safely take beta blockers. Prior to any of this, however, I am setting him up for a cardiac catheterization with coronary angiography with possible PCI with the procedure, indications, and risks (death, stroke, myocardial infarction, arterial, and urgent bypass surgery for failed intervention) and risk/benefit ratio being outlined. He is to stop his Coumadin 5 days ahead of time and start on a baby aspirin with this and to take no metformin the night before or day of the procedure. He is willing to proceed.

DOS: 08/05/2011
AGE: 68Y SEX: M
CHART ID:
MRN:
SSN:

OFFICE NOTE

HISTORY: The patient returns doing okay. He has had no major cardiovascular symptoms, but says he has fallen twice - not syncope - and blames part of this on the use of Clonazepam. This apparently has made him drowsy at times and he is taking it once a day and has been placed on phentermine for weight loss, and is being followed for this by Dr. Carter. He has been "reading up" on his symptoms and has come to the conclusion that he may have Parkinson's disease and apparently has filed a claim for this and is seeing a neurologist. This is on the backdrop of the of chronic atrial fibrillation with occult sick sinus syndrome that at this point is asymptomatic.

CURRENT MEDICATIONS: As listed.

GENERAL REVIEW OF SYSTEMS: CONSTITUTIONAL: No fevers, chills, weight loss. EYES: No visual disturbances. EARS, NOSE, MOUTH AND THROAT: Negative. CARDIOVASCULAR: See History of Present Illness. RESPIRATORY: No cough, sneeze; otherwise, see HPI. GASTROINTESTINAL: Negative. No dyspepsia, constipation. No other GI review of systems. GENITOURINARY: No difficulty voiding, no history of renal abnormalities or genital complaints. MUSCULOSKELETAL: Negative. INTEGUMENTARY: No lesions. NEUROLOGICAL: No motor or sensory deficits. Cranial nerves intact. The patient is alert and oriented. PSYCHIATRIC: Appropriate mental status. ENDOCRINE: Negative except as mentioned under past medical history. HEMATOLOGIC/LYMPHATIC: Negative. No anemia, no lymphadenopathy, no blood dyscrasias. ALLERGIC/IMMUNOLOGIC: Negative. All other systems are negative.

PHYSICAL EXAMINATION: VITAL SIGNS: Blood pressure 120/70. EYES: Conjunctivae and lids normal. ENT: Dentition/gums/mucosa normal. Normocephalic. No neck vein distention. Normal carotid upstroke and amplitude, symmetric without bruits. The thyroid is nonpalpable. LUNGS: Clear to auscultation. Respirations are unlabored. CARDIAC: The PMI is nondisplaced, no lifts or thrills. S1 and S2 normal. There were no murmurs, rubs or gallops. ABDOMEN: Nontender. Bowel sounds are normoactive. There were no palpable masses or hepatosplenomegaly. No abdominal aortic bruit or abnormal pulsation. EXTREMITIES: Femoral and pedal pulses are 2+ and symmetric with normal amplitude. There is no edema, cyanosis or clubbing. No venous varicosities and no ischemic changes. SKIN: No lesions identified. NEUROLOGIC: No motor or sensory deficits are detected. The patient is oriented to time, place and person with normal affect/mood. MUSCULOSKELETAL: Normal muscular strength and tone is noted.

LABORATORY DATA: EKG shows atrial flutter with generally controlled ventricular response with one Ashman's beat.

IMPRESSION:

1. Chronic atrial fibrillation - occult sick sinus syndrome with chronic Coumadin therapy.
   a. No indication for pacemaker just now.
2. Sleep apnea.
3. Adult onset diabetes mellitus.
4. Hypertension.
5. Hyperlipidemia.

Re: Alvin Menie v State Accident Fund et al

Dear Mr. Haselden:

I have reviewed the following documents regarding Alvin Menie:

1. Deposition of Charles W. Hendricks, M.D.
2. Office visit 2/03/2011 – Dr. Hendricks
3. Office visit 10/07/2010 – Dr. Hendricks
4. Office visit 2/18/2004 – Dr. Hendricks
5. Office visit 2/21/2003 – Dr. Hendricks
6. Hospitalization – Lexington Medical Center 3/04/2003
7. *CardioSmart*: atrial fibrillation article
8. Communication between Preston McDaniel and Dr. Hendricks 11/01/2010
9. JNC7 full report

I was asked to address the causality for the development of atrial fibrillation in Alvin L. Menie beginning March 4, 2003. I believe to a reasonable degree of medical certainty that this patient's atrial fibrillation was caused by pre-existing and underlying cardiovascular disease processes including but not limited to morbid obesity, sleep apnea, hypertension, sick sinus node syndrome, and diabetes. I do not believe that stress, anxiety or physical work load related to his job contributed to the development of atrial fibrillation. Therefore, I believe that it is more probable than not that the cause of his atrial fibrillation was pre-existing cardiovascular and cardiovascular related diseases and not changes in his work environment which resulted in him developing a clinical syndrome of atrial fibrillation.

I hope this addresses the questions that you asked of me. If there are further details or other questions please do not hesitate to contact me.

Sincerely,

Michael R. Zile, M.D.

vs.	)	**AFFIDAVIT OF COUNSEL**
	)	
State Accident Fund,	)	
Employer,	)	
Carrier,	)	
Defendant.	)	
	)	

Personally appeared before me, Andrew E. Haselden, who on oath states and deposes:

1. He is counsel for the Defendants in this matter.

2. Claimant served the Defendants with a subpoena dated March 11, 2011, a copy of which is attached as hereto. (*Exhibit 1*)

3. In order to comply with the subpoena, the undersigned met with representatives of the State Accident Fund at their offices on April 11, 2011, to review documents to be produced.

4. While at the State Accident Fund, the undersigned made a telephone call to counsel for the Claimant to discuss production of the documents responsive to the subpoena.

5. Claimant's attorney was not there and the undersigned was directed to his assistant.

6. The undersigned asked Claimant's attorney's assistant how they wanted to handle production of the documents, specifically whether they wanted to come review

21

them, have them copied by an outside copying service (i.e., Ikon, etc.) or *whether they wanted the State Accident Fund to copy the documents in house.*

7. The undersigned was directed to have the State Accident Fund copy the documents in house.

8. The undersigned did so and the State Accident Fund copied the documents and forwarded them to counsel for the Claimant along with a bill for copying charges (which was based on Section 42-15-95 of the Act). (*Exhibit 2*)

9. On April 19, 2011, counsel for the Claimant sent the attached letter via e-mail in which, ***contrary to the direct instructions from his office to the undersigned***, he states that he refuses to pay the copying charges. (*Exhibit 3*)

10. To date, the copying charges remain unpaid.

Further the Affiant sayeth not.

Andrew E. Haselden

RE: Alvin L. Menie v. State Accident Fund
WCC File No.: 0307461

Dear Ellen:

In reference to the Subpoena Duces Tecum that I served on the State Accident Fund, pursuant to the Circuit Rules, that subpoena is for the production of the original documents so that we could review and make copies of the one we wanted. If the State Accident Fund chooses to provide copies of all the records instead of producing the originals of the files requested, that is their choice but I will not pay a copying fee. The choice to make copies instead of producing originals is on behalf of the party called to produce those documents which I will accept in this case subject to my right to review originals if needed. I just wanted to make sure that was clear.

Next, I am willing to pay for copies of CD/DVD(s) in reference to the recorded statements or will be glad to provide blank CD/DVD for those to be copied onto.

I look forward to receiving the information requested and seeing you at the hearing. Again, I really hope that you will look at this file and I would love to resolve it short of hearing in everyone's best interest. I think that this claim is a pretty straight-forward case and Al did a wonderful job for the State

32

Accident Fund for many, many years and it was due to his efforts in time of trouble in this regard that resulted in this situation with his heart. In any event, I look forward to seeing you in the future on this case. Ellen also I would appreciate it if you could let me know who is handling this file so I can quit cc'ing Andy if he is not going to handle it.

Sincerely yours,

Preston F. McDaniel

P.S. to Andy: Andy, I hope you handle it or handle it with Ellen. Haven't seen you in a long time but just trying to save postage if you aren't. Ha! -Preston

EXHIBIT "B"

Atrial Fibrillation

WHAT IS IT?

Atrial fibrillation (AF) is the most common heart rhythm disorder seen by doctors. It's a big public health issue in terms of not only the sheer number of patients affected, but also by the fact that managing these specific arrhythmias (which is the medical name for heart rhythm problems) is expensive.

Also Known As: A Fib, AF, Atrial Fib, auricular fibrillation, supraventricular arrhythmia, supraventricular tachyarrhythmia

KEY FACTS

In the United States, more than 2.2 million people have atrial fibrillation (AF) including 9% of people over the age of 80.
About 15% to 20% of all strokes result from atrial fibrillation.
AF can arise from temporary (acute) causes such as alcohol consumption, heart attack, surgery, lung disease, or a metabolic disorder (such as an overactive thyroid gland).
AF can also be related to long-term (chronic) conditions such as high blood pressure, diabetes, or heart failure.
Obesity is an important risk factor for the development of AF and weight loss may decrease the risk associated with AF.
AF can be occasional (paroxysmal, which self terminates) or ongoing (persistent). If it does not respond to an electric current that is used to reset the heart's rhythm back to its regular pattern (called cardioversion), it can progress to permanent AF.
The most common signs of AF are heart palpitations, chest pain, and shortness of breath. AF can also be silent.
There are two approaches to treatment: heart rate control or heart rhythm control, with therapies ideally achieving both goals.. When medication is ineffective, AF treatments can include cardioversion, ablation therapy (that targets specific cells that are causing the AF), and open-heart or minimally-invasive surgery that also targets a specific area of the heart that is causing the problem.
Heart-healthy lifestyles can help prevent AF or make you better able to live with it.

BACKGROUND

The heart has an electrical system that controls both the speed and rhythm of each heartbeat. This electrical system is controlled by the autonomic nervous system, which also handles critical functions such as breathing and digestion — all those functions that need to happen automatically rather than under our conscious control.

When your heart beats, an electrical signal starts at the top of the heart in a group of cells called the sinus (or sinoatrial) node. This node, your heart's natural pacemaker, is located in the right atrium, which is the upper right chamber of the heart. There are two atria (the right and left) and these function primarily as priming pumps for the two ventricles, the main squeezing chambers and workhorses of the heart.

The electrical signal from the sinus node travels through the right and left atrium to the atrioventricular (AV) node, a sort of relay station, where the electrical signal pauses before it spreads to the right and left ventricles. As the signal travels from the sinus node toward the AV node, it causes the atria to contract and pump blood into the ventricles, ensuring optimal filling of these chambers.

When the electrical signal then spreads from the AV node to the ventricles, it causes those chambers to squeeze, pushing blood out of the heart and into the body. This rhythmic, coordinated sequence of events ensures efficient heart function. A normal heart repeats this sequence automatically and without stopping, beating on average 60 to 100 times per minute. And when the electrical system is functioning normally, we say the patient is in "normal sinus rhythm".

An arrhythmia occurs when the heart's electrical system malfunctions causing a failure in the synchronization that's required for the heart to work properly. In the specific arrhythmia known as atrial fibrillation, electrical signals no longer start in the sinus node, but rather fire rapidly and haphazardly throughout the heart's upper chambers. These disorganized electrical impulses cause the atria to contract quickly and irregularly, resulting in rapid quivering of the upper chambers, which is medically known as fibrillation (hence, the name atrial fibrillation). These chaotic and rapid electrical signals also bombard the AV node, usually causing heart rate to rise. As a result, the organized flow of blood within the heart becomes disrupted and heart rhythm becomes very irregular. It can also become quite fast, occasionally reaching heart rates as high as 160 beats per minute at rest.

ADVERTISEMENT

Up to one-third of patients with atrial fibrillation have asymptomatic or "silent" AF, which is more common in the elderly. Other people with AF experience symptoms such as palpitations, fainting, chest pain, or even heart failure.

If the heart's atria are not contracting properly, blood can pool in the heart's upper chambers. Such pooled blood can lead to the formation of blood clots within the atria, which in turn can cause strokes if the clots are carried into the blood stream and lodge in the arteries of the brain.

AF is a major risk factor for stroke (increasing stroke risk about 5-fold) with the absolute level of risk somewhat dependent on the number of additional risk factors for stroke in a given individual. Just like there can be silent AF, strokes can be "silent" too, but even these asymptomatic strokes may have significant ramifications. For example, elderly people with silent strokes have greater than double the risk of dementia and a steeper decline in global cognitive function compared to age-matched individuals without evidence of such strokes.

One particular high-risk variable: transient ischemic attacks (TIAs). These are "warning strokes" that produce stroke-like symptoms but no lasting damage. A person who's had one or more TIAs is almost 10 times more likely to have a stroke than someone of the same age and sex who hasn't. Therefore a history of TIA and AF is a combination that suggests a strong need for preventive therapy and stroke risk reduction.

Patterns of AF

Doctors tend to label AF by its pattern of occurrence. Episodes that last 7 days or less (often less than 24 hours) are called "paroxysmal AF" and they usually stop on their own. However, when AF lasts longer than 7 days, it is considered "persistent" and may require treatment before the episode stops. When AF lasts longer than a year it is considered "permanent". If an individual has two or more AF episodes, whether the arrhythmia stops on its own or must be stopped via therapy, the condition is considered "recurrent AF".

BY THE NUMBERS

In the United States, about 2.2 million people have AF, and nearly 5 million are affected in the European Union. This is the most common arrhythmia that doctors see in practice, and AF is the cause of about one-third of all hospitalizations related to cardiac rhythm problems. Overall, hospitalizations for AF have increased 66% in the last 20 years. This is due to various factors, including the aging of the population, a rise in chronic heart disease, and more frequent diagnosis through the use of ambulatory monitoring devices. The annual cost per patient is approximately $3,600, which may not seem like a lot, but given how many people are afflicted with AF, that comes to well over $7 billion per year in the United States and about $15.7 billion per year in the European Union.

About 15% to 20% of all strokes occur in someone with AF, which in hard numbers means that AF causes about 70,000 strokes each year just in the United States alone. Stroke risk increases with age. While AF is seen in only about 1% of the total U.S. adult population, it affects about 3.8% of those older than 60 years and 9.0% of those older than 80 years. Up to 40% of patients with heart failure also experience AF, and patients with this combination of heart problems are at particularly high risk for cardiac death.

Approximately 30% to 45% of cases of paroxysmal AF (when the AF lasts for 7 days or less) and 20% to 25% of cases of persistent AF (that lasts for more than 7 days) occur in young patients without any identifiable underlying disease. This is known as "lone AF."

CAUSES AND RISK FACTORS

Risk factors

There are several well-established risk factors for AF, with coronary artery disease and heart failure being most frequently associated with atrial fibrillation. Rheumatic heart disease, which affects the valves of the heart, and congenital heart abnormalities (inherited heart defects) also increase the chance of AF.

Cardiac risk factors such as hypertension and diabetes can also play a role in damaging the atria of the heart, leading to AF.

There are a number of acute, temporary causes of AF as well as chronic conditions which lead to this rhythm abnormality. For the most part, when the temporary condition ceases or is treated, AF usually resolves. In the presence of chronic conditions, treatment should target both the AF and the chronic problem that is contributing to the risk of AF-associated events.

Acute conditions

One acute condition associated with AF is excessive alcohol consumption. There is even a medical term for this: "holiday heart syndrome," so named because the excessive

consumption of alcohol that sometimes occurs with holiday celebrations is associated with a spike in the number of people presenting with AF.

Other acute conditions relate to medical factors such as surgery, lung disease, asthma attacks, extreme body stress due to conditions such as pneumonia, or the occurrence of a metabolic disorder, such as hyperthyroidism (overactive thyroid gland). An inflammation of the lining of the heart can also cause the atria to fibrillate, and having a heart attack increases the risk of AF.

Many of these acute conditions can cause chemical imbalances that can lead to electrical imbalances in your heart, triggering AF. Once the necessary balance is restored — for example, pneumonia resolves or alcohol is eliminated — the AF usually disappears on its own.

Chronic conditions

A number of chronic or long-term conditions also can lead to AF. For the most part, these consist of existing heart problems, such as congenital heart defects, particularly atrial septal defect, or heart valve diseases such as those related to prior rheumatic fever. These conditions tend to results in atrial enlargement, which in effect stretches out the electrical "wiring" of those chambers, making short circuits and sparks (AF) more likely. Additionally, AF may be associated with hypertrophic, dilated, or various other cardiomyopathies; these conditions also change the shape of the heart, interfering with the heart's intricate electrical system. Longstanding lung problems such as COPD (chronic obstructive lung disease), can also predispose to atrial fibrillation.

Two other common conditions that can lead to AF are obesity and sleep apnea. In a study of more than 3,400 adult patients who never had atrial fibrillation, 14% ended up being diagnosed with AF after several years of follow-up. Beyond the typical risk factors mentioned above, the incidence of AF was strongly predicted both by obstructive sleep apnea and excess weight.

It turns out that obesity can actually change the size of the heart's atria, with a graded increase in atrial size occurring as body weight increases from normal, to overweight, to obese. Weight loss has been shown to reduce atrial size, suggesting that weight reduction may decrease the risk of developing AF.

More than 25 million U.S. adults are estimated to have obstructive sleep apnea and the incidence of AF is about 5 times greater in people with apnea compared to people who do not have sleep apnea. Looking at it another way, between one third and one half of all patients with AF have sleep apnea.

Sleep apnea is a condition in which patients do not breathe normally or regularly during sleep. Instead, breathing pauses or becomes very shallow, with abnormal breathing episodes lasting a few seconds up to several minutes. These episodes can occur anywhere from 5 to 30 or more times per hour, disturbing restful sleep. This disrupted sleep can contribute to an increased risk of arrhythmias such as AF, although it is not clear whether this is due to biochemical alterations that occur when sleep is disrupted or other conditions that arise from sleep apnea.

Age and family history

AF tends to occur more frequently in older people, primarily because the older you are, the more likely you are to have heart disease or other health problems.

Although AF is often considered an electrical problem that is linked to underlying cardiac disease, that is not always the case. Approximately 30% to 45% of cases of paroxysmal AF and 20% to 25% of cases of persistent AF occur in younger patients who have no heart defects or disease (lone AF). The cause of lone AF may not be known for quite some time, if at all. When lone AF runs in a family, it is called familial AF. Your chances of developing AF are higher if your parents have or had it.

SIGNS AND SYMPTOMS

Probably the most recognizable sign of AF is heart palpitations, where your heart beats so fast that you think it is racing and/or you can feel it thumping or flopping in your chest. It may be accompanied by chest pain; lightheadedness or dizziness, especially if you are exerting yourself; weakness; or shortness of breath, including difficulty breathing when lying down. AF symptoms will vary depending on the degree of pulse irregularity and resultant heart rate, underlying functional status, how long the AF lasts, and individual patient factors.

Remember: one of the effects of AF may be formation of a blood clot in the atria. If this happens and the clot travels up to the brain, you may have a stroke. Sometimes a stroke is the first sign of underlying AF, especially if the symptoms have been light or nonexistent.

There is no set amount of time that marks an episode of AF — it may be very short and stop on its own or it may be prolonged and you find yourself in need of medical intervention. Over time, you may become more accustomed to the pattern of your AF, and what factors contribute to and relieve this arrhythmia.

TESTING AND DIAGNOSIS

First, your doctor will take a medical history from you looking for information on you and your family. The information from you will include questions that will: help your doctor understand your specific symptoms and how severe they may be; define your AF clinically (e.g., paroxysmal, persistent, or permanent); and reveal AF frequency, duration, precipitating factors, and how it terminated (if it did). If you received any treatment for the AF before seeing your doctor (if paramedics administered a drug or defibrillation therapy, for example), your doctor will want to review your response to such therapy. Finally, you will be examined to see if you have any heart disease that may be causing the AF or whether there may be a reversible condition, such as pneumonia, that triggered the AF.

Electrocardiograms and echocardiograms

You likely will have an electrocardiogram, known as an ECG or an EKG. This is a noninvasive test in which patches (called electrodes) are attached to your chest to detect and record the electrical activity of your heart. The electrical impulses travel by wires attached to the electrodes and are recorded as waves on a sheet of paper. This test allows your physician to see how fast your heart is beating and whether the rhythm is regular or irregular. A number of heart irregularities and conditions are detectable with an ECG. The tracing can even provide clues as to whether or not you have had a previous heart attack.

If you do not have AF at the time of your ECG – for instance, if you have paroxysmal AF and the episode has abated – then you may be asked to wear a portable or "ambulatory" ECG monitor. One type, a Holter monitor, records your heart's activity continuously for a 24- or 48-hour period. Other devices, called "event monitors", record only when you press a button to indicate that you are feeling symptoms. Event monitors can be worn for up to one month..

Another noninvasive test is an echocardiogram, known informally as an echo. If you have ever had or seen an ultrasound test used on pregnant women, then the technology and concept of an echo will be familiar to you. With an echo, sound waves are directed at your heart with a device called a transducer that is held on your chest. The sound waves bounce off your heart and are processed electronically to create a video of your heart as it beats.

Not only does an echo show the size and shape of your heart chambers, it also provides information on how well the chambers and valves are functioning or if there is evidence of previous heart damage. y. Clearly, echocardiography offers a great deal of insight into whether structural heart disease is present or if there are problems that could be causing or contributing to AF. The standard echo is also called a transthoracic echocardiogram (TTE), since the pictures are obtained by imaging through the chest wall, or thorax.

Another type of echo is the transesophageal echocardiogram (TEE), which uses a transducer at the end of a tube or probe inserted into the mouth and down the esophagus. This is done because the atria are deep in the chest and not always well imaged with a regular echo. The TEE is especially good at detecting possible clots in the atria. To ease the discomfort of a TEE, the patient is usually sedated and the back of the throat is numbed before the procedure.

Other tests

Your doctor also will order blood tests, primarily to measure thyroid function. Other blood tests may be ordered to evaluate kidney and liver function, mostly to see if there are any limitations with regards to the medications you might require. Additionally, you may have a chest X-ray to get a better assessment of your lungs, especially if there is any suspicion of pneumonia or other lung disease. Some physicians also may order exercise tests, especially if the AF is prolonged or considered permanent, to help determine whether your heart rate is under good control.

If necessary, you may undergo an electrophysiology study. Essentially, electrophysiology is the science of measuring the electrical potential of the body; for example, the electrical activity of the brain can be assessed by an electroencephalogram or EEG. Cardiac electrophysiology usually requires more invasive methods, such as inserting a special cardiac catheter that can record both ongoing electrical activity of the heart as well as responses to specific stimulation of the heart. Such tests help physicians look at a range of complex arrhythmias including AF, provide further insight into the potential causes of abnormal ECGs, assess your risk of developing AF or other heart rhythm problems in the future, and create a treatment plan if you do have AF. The electrophysiology study is not a routine test, and is not performed in all patients with AF. Usually this type of evaluation is

reserved for patients who have failed drug treatment and are being considered for ablation therapy (see below).

TREATMENT

Atrial fibrillation can be tough to treat. Management of AF is designed to achieve several objectives:

Prevent blood clots from forming;
Control the heart rate, concentrating on how many times per minute the heart beats (rate control);
Restore the heart to a normal rhythm (rhythm control); this helps the heart's chambers work together more efficiently, which also can improve rate control;
Treat underlying conditions that may be causing or worsening the AF, such as overactive thyroid function, other metabolic imbalances or various cardiac diseases.

There are different strategies to treat AF, and the goal may be to achieve some or all of the above objectives. Which approach is best for you will depend on various factors, including whether you are currently being treated for other heart or medical problems. Sometimes you will need a combination of treatments to effectively treat your AF.

Prevention of blood clots

The two most common drugs used to prevent blood clot formation (and thus reduce the risk of stroke) are warfarin and aspirin. Warfarin (commonly known as Coumadin) is more effective than aspirin for preventing stroke in this situation. However, warfarin has more side effects — such as potential bleeding problems — than aspirin. Aspirin is the standard treatment for patients without other risk factors for stroke who are also under 75 years of age. If you have only one moderate risk factor for stroke in addition to atrial fibrillation (such as hypertension, diabetes, or heart failure), either aspirin or warfarin may be considered to reduce stroke risk. If you have at least one high-risk factor (e.g., a previous stroke or TIA, age older than 75), you will likely receive warfarin.

Because warfarin is a powerful blood thinner, it requires intense monitoring. Such monitoring involves regular blood tests to measure INR. INR stands for international normalized ratio and this test allows doctors to determine how thin the blood is. For patients with atrial fibrillation, goal INR is usually 2.0 to 2.5. The frequency of INR measurements varies from patient to patient and is driven by how stable the INR measurements are over time.

While aspirin and warfarin can be very effective in reducing the risk of stroke (and heart attack), they are associated with a small risk of serious side effects. Most of the side effects are bleeding related. Patients at higher risk for injury (those with balance issues, patients who abuse alcohol, and those who work in professions where falls are possible, etc.) may not be able to use warfarin, even if they would otherwise qualify for this therapy..

Rate control

To slow heart rate, doctors usually rely on beta-blockers (such as metoprolol, propranolol, etc.), calcium channel blockers (verapamil, diltiazem, etc.), or digoxin. Other agents can be prescribed depending on your particular needs. Beta blockers and calcium channel blockers, although relatively safe, can lower blood pressure and slow the heart rate profoundly. That is why your doctor will carefully monitor the effects of whatever medication you are prescribed.

Rhythm control

Ideally, you want to get your heart to regain its normal rhythm, although this becomes more difficult the longer you have AF. To convert the heart to normal sinus rhythm, doctors may use cardioversion, which is defined as the conversion of one cardiac rhythm or electrical pattern to another. This can be accomplished with drug therapy or with medical procedures.

The medications used to treat AF, generally referred to as antiarrhythmics, are designed to suppress arrhythmias or pharmacologically convert an arrhythmia to a normal rhythm. The particular agent used to treat an episode of AF will depend on a number of variables, including the type of AF being treated (paroxysmal or persistent), patient age and other health issues which may be present. These drugs may be given by mouth or intravenously for faster delivery (although the latter is more likely if you have been hospitalized). If the antiarrhythmic medications produce the desired effect on an episode of AF (that is, you return to normal sinus rhythm), you may be given the same or similar medication to prevent repeat episodes of AF. In some cases, you will need to take the medicine on a regular, ongoing basis; in others, you will take it as needed.

One potential side effect of medications that are used to control heart rhythm is that they may paradoxically cause different rhythm problems ("proarrhythmic effect"). This is why

some of these medications are only administered in a hospital setting and why your doctor will carefully monitor the effects of whatever medication you are prescribed. Ongoing research is evaluating newer agents that may improve on the effectiveness or safety of the currently available antiarrhythmic drugs. It is always wise to periodically check in with your doctor to see if any new medications are available that would be beneficial in your particular case.

Alternatives to drug therapy

When medications do not work, there are alternatives. Electrical cardioversion uses a jolt of electricity to your heart either through paddles or wired patches attached to your chest. This is a controlled, usually prescheduled procedure — not the type of emergency "defibrillation" depicted in film or on TV when a character's heart has stopped. Defibrillation is done under light anesthesia in the hospital, and the patient usually goes home the day of the procedure.

Another option is catheter ablation, which targets and destroys small areas of cells in the heart thought to be the source of electrical malfunction. In this technique, a catheter is threaded into your heart and radio frequency energy in the form of radio waves is emitted to selectively cauterize the errant heart cells. This procedure usually improves heart function, exercise capacity, and quality of life.

The aim of catheter ablation is to "cure" AF, although that word may be misleading. Most studies which have looked at the outcome of ablation have followed patients for only 5- to 10-years. It's unknown whether these "cured" patients may once again develop AF.

Not all patients undergoing ablation have their arrhythmia completely eliminated by the procedure. Nevertheless, many such patients sill experience greatly improved heart rate control. The result of ablation may be that drug therapy that failed to control heart rate in the past may be effective once again. Between those patients experiencing an effective "cure" and those who see great improvement following ablation, the overall success rate of this procedure is about 70% to 80%. One important point: if ablation does not provide rhythm control, medications for that problem may remain necessary, as may the need for antithrombotic therapy to prevent blood clot formation. In some cases, implantation of a pacemaker will be recommended.

By the way, these ablation procedures may be repeated in some patients. As many as one-third of all patients end up getting a second procedure, which often proves effective for a year or more.

Another rhythm-control strategy is the Maze procedure, which often requires open heart surgery, because the clinician must make precise, small cuts (or possibly catheter burns) in specific places on the atria. The goal is to create a pattern of scar tissue — which does not conduct electricity — that effectively "walls off" the errantly firing heart tissue, preventing the AF from spreading to the rest of the heart. The procedure's name comes from the pattern of incisions made in the atria - which look like a child's maze. Usually, the Maze procedure is only performed when open heart surgery is required for other reasons.

Rate versus rhythm control

The best-case scenario occurs when a treatment provides both effective rate and rhythm control. However, when treatment is not effective or it loses effectiveness over time, there has been a great deal of argument as to which approach is better: rhythm control or rate control. One common approach is to initially target rhythm control with the thought that restoration of normal sinus rhythm will lower the risk of stroke; reduce symptoms; improve exercise tolerance, quality of life, and even survival; and perhaps permit discontinuation of long-term warfarin therapy. Unfortunately, AF is not always responsive to antiarrhythmic therapy. Moreover, these drugs have been known to have serious side effects. That's why it makes sense to opt for rate-control strategies in some patients, especially given that rate -control drugs are usually much less toxic than antiarrhythmic therapy.

Some researchers have compared the two strategies to see if either presents a survival advantage over the other. In the Atrial Fibrillation Follow-up Investigation of Rhythm Management (AFFIRM) trial involving 4,060 patients with advanced heart disease, there was no significant difference in terms of mortality rates between patients assigned to rate-control therapy and those receiving rhythm-control therapy. However, the rhythm-control group was hospitalized more often and experienced more adverse drug effects than those undergoing rate-control therapy.

A more recent study, the Atrial Fibrillation with Congestive Heart Failure (AF-CHF) study, involved an even sicker population of patients. Again, rhythm-control was no better than rate control in preventing deaths from cardiovascular causes. Because of the greater spectrum of side effects seen with rhythm control, the investigators concluded that rate control should be the first approach in similar patients with advanced heart failure.

As far as which approach is best for you needs to be determined in the context of your overall health situation. Your personal physician is in the best position to advise you in regards to these considerations.

Overall, the presence of AF does not preclude an active life. The disorder is usually controllable with treatment and many people with atrial fibrillation do very well. However, AF tends to become a chronic condition and may come back even with initially successful treatment.

POSSIBLE COMPLICATIONS

As previously noted, there is an increased risk of stroke in people with AF and the risk is even greater in the presence of other types of heart disease. Persistent and especially permanent AF also leaves individuals susceptible to other cardiac diseases, especially heart failure, and an overall increased risk of dying. In fact, the death rate of patients with AF is about double that of people with normal sinus rhythm.

Because AF results in less efficient heart pumping, this rhythm can also affect quality of life, making it more difficult to handle even routine physical activities. In some patients, the AF is completely asymptomatic, having no effect on general sense of well being or activity levels.

LIVING WITH ATRIAL FIBRILLATION

Always take antiarrhythmic drugs exactly as directed. These drugs work best when they are at constant levels in the blood. To help keep levels constant, take your medicine as directed; do not miss any doses and never take larger or more frequent doses. Don't stop taking antiarrhythmic drugs without checking first with your physician, because stopping some of these drugs suddenly could lead to serious side effects. If taking medicine at night interferes with sleep, or if it is difficult to remember to take your medicine during the day, check with a health care professional for suggestions.

When you visit your doctor or an emergency room (whether for an AF-related problem or not), bring a detailed list of all your prescription drugs with you. Having a complete picture of all your medications is critical in any health care setting, but it is especially important if you are taking antiarrhythmics. Also, keep all medical appointments; don't assume that because you're feeling better it is not necessary to visit your doctor. Precise updates on your condition are required to make sure that the treatment strategy is right (and safe) for you. Keeping regular doctor's appointments is particularly critical if you are taking anticoagulants or blood-thinning medications. If you experience medication side effects or symptoms of AF, be sure to share that with your doctor.

Besides making sure you follow all directions related to your prescription medications, beware of over-the-counter medicines – those that do not require a prescription – including nutritional supplements and cold and allergy medicines. Some of these widely available drugs may contain stimulants or have other properties that can trigger arrhythmias and/or interact with your prescription medications in ways that can lessen their effectiveness or make the prescription drug much more powerful, increasing the likelihood of a serious side effect or other adverse event.

Limiting alcohol consumption is important, too, especially if alcohol triggers your AF. Reducing intake of caffeinated beverages may also be recommended since caffeine has stimulating properties that could be harmful in people with AF.

PREVENTION

Left untreated, AF causes the atrial chambers to weaken and stretch out. This makes it even harder for the atria to contract properly, which leads to even more blood pooling in the atria, and a greater risk of stroke and heart failure. Treating AF correctly is the best way to reduce stroke risk.

If you are at risk of developing AF (based on family history, for example) you can help prevent AF. This requires action that can prevent or control the major risk factors for AF, such as coronary artery disease, hypertension, excess weight and diabetes. By avoiding these risk factors, you can significantly reduce your chances of experiencing AF during your lifetime.

This requires adopting a heart-healthy lifestyle, which means weight loss if you are overweight, changing to a heart-healthy diet, becoming more physically active, and making sure that hypertension or other conditions that can lead to heart disease are treated and well managed.

LOCAL TITLE: C&P EXAM
STANDARD TITLE: C & P EXAMINATION NOTE
DATE OF NOTE: SEP 17, 2011@12:00 ENTRY DATE: SEP 17, 2011@12:42:42
AUTHOR: WILDE,GRAHAM L EXP COSIGNER:
URGENCY: STATUS: COMPLETED

Hearing Loss and Tinnitus
Disability Benefits Questionnaire

Name of patient/Veteran: MENIE, ALVIN L.

Your patient is applying to the U.S. Department of Veterans Affairs (VA) for disability benefits. VA will consider the information you provide on this questionnaire as part of their evaluation in processing the Veteran's claim.

NOTE: This form is only for use by VHA staff or contract examiners.

This exam is for:

[ ] Tinnitus only (audiologist or non-audiologist clinician)

If this exam is for tinnitus only, complete section 2 only. Otherwise complete entire form.

[X] Hearing loss and/or tinnitus (audiologist, performing current exam)

[ ] Hearing loss and/or tinnitus (audiologist or non-audiologist clinician, using audiology report of record that represents Veteran's current condition)

If using audiology report of record, date audiology exam was performed:

SECTION 1: HEARING LOSS (HL)

NOTE: All testing must be conducted in accordance with the following instructions to be valid for VA disability evaluation purposes.

Instructions:

An examination of hearing impairment must be conducted by a state-licensed audiologist and must include a controlled speech discrimination test (specifically, the Maryland CNC recording) and a puretone audiometry test in a sound isolated booth that meets American National Standards Institute standards (ANSI S3.1.1999 [R2004]) for

ambient noise. Measurements will be reported at the frequencies of 500, 1000, 2000, 3000 and 4000 Hz.

The examination will include the following tests: Puretone audiometry by air conduction at 250, 500, 1000, 2000, 3000, 4000, 6000 Hz and 8000 Hz, and by bone conduction at 250, 500, 1000, 2000, 3000, and 4000 Hz, spondee thresholds, speech discrimination using the recorded Maryland CNC Test, tympanometry and acoustic reflex tests (ipsilateral and contralateral), and when necessary, Stenger tests. Bone conduction thresholds are measured when the air conduction thresholds are poorer than 15 dB HL. A modified Hughson-Westlake procedure will be used with appropriate masking. A Stenger must be administered whenever puretone air conduction thresholds at 500, 1000, 2000, 3000, and 4000 Hz differ by 20 dB or more between the two ears.

Maximum speech discrimination will be reported with the 50 word VA approved recording of the Maryland CNC test. The starting presentation level will be 40 dB re SRT. If necessary, the starting level will be adjusted upward to obtain a level at least 5 dB above the threshold at 2000 Hz, if not above the patient's tolerance level.

The examination will be conducted without the use of hearing aids. Both ears must be examined for hearing impairment even if hearing loss in only one ear is at issue.

When speech discrimination is 92% or less, a performance intensity function must be obtained.

A comprehensive audiological evaluation should include evaluation results for puretone thresholds by air and bone conduction (500-8000 Hz), speech reception thresholds (SRT), speech discrimination scores, and acoustic immittance with acoustic reflexes (ipsilateral and contralateral reflexes). Tests for non-organicity must be performed when indicated.

1. Objective Findings

a. Puretone thresholds in decibels (air conduction):

Instructions: Measure and record puretone threshold values in decibels at the indicated frequencies (air conduction). Report the decibels (dB) value, which range from -10 dB to 105 dB for each of the frequencies. Add a plus behind the decibel value when a maximum has been reached with a failure of response from the Veteran. In those circumstances where the average includes a failure of response at either the maximum allowable limit (105 dB) or the maximum limits of the audiometer, use this maximum decibel value of the failure of response in the puretone threshold average calculation.

If the Veteran could not be tested (CNT), enter CNT and state the reason why the Veteran could not be tested. Clearly inaccurate, invalid or unreliable test results should not be reported.

The puretone threshold at 500 Hz is not used in calculating the puretone threshold average for evaluation purposes but is used in determining whether or not for VA purposes, hearing impairment reaches the level of a disability. The puretone threshold average requires the decibel levels of each of the required frequencies (1000 Hz, 2000 Hz, 3000 Hz, and 4000 Hz) be recorded for the test to be valid for determination of a hearing impairment.

RIGHT EAR

A	B	C	D	E	F	G	
500 Hz*	1000 Hz	2000 Hz	3000 Hz	4000 Hz	6000 Hz	8000 Hz	Avg Hz (B-E)**
30	25	40	60	85	90	90+	52

LEFT EAR

A	B	C	D	E	F	G	
500 Hz*	1000 Hz	2000 Hz	3000 Hz	4000 Hz	6000 Hz	8000 Hz	Avg Hz (B-E)**
35	30	35	55	85	85	90	51

* The puretone threshold at 500 Hz is not used in determining the evaluation but is used in determining whether or not a ratable hearing loss exists.

** The average of B, C, D, and E.

*** CNT - Could Not Test

b. Were there one or more frequency(ies) that could not be tested?
[ ] Yes [X] No

If yes, enter CNT in the box for frequency(ies) that could not be tested, and explain why testing could not be done:

c. Validity of puretone test results:

[X] Test results are valid for rating purposes.
[ ] Test results are not valid for rating purposes (not indicative of organic hearing loss).
If invalid, provide reason:

d. Speech Discrimination Score (Maryland CNC word list)

Instructions on pausing: Examiners should pause when necessary during speech discrimination tests, in order to give the Veteran sufficient time to respond. This will ensure that the test results are based on actual hearing loss rather than on the effects of other problems that might slow a Veteran's response. There are a variety of problems that might require pausing, for example, the presence of cognitive impairment. It is up to the examiner to determine when to use pausing and the length of the pauses.

RIGHT EAR	94%
LEFT EAR	94%

e. Appropriateness of Use of Speech Discrimination Score (Maryland CNC word list)

[X] Use of speech discrimination score is appropriate for this Veteran.

[ ] The use of the speech discrimination score is not appropriate for this Veteran because of language difficulties, cognitive problems, inconsistent speech discrimination scores, etc., that make combined use of puretone average and speech discrimination scores inappropriate.

f. Audiologic Findings

Summary of Immittance (Tympanometry) Findings:

	RIGHT EAR	LEFT EAR
Acoustic immittance	Normal [X] Abnormal [ ]	Normal [X] Abnormal [ ]
Ipsilateral Acoustic Reflexes	Normal [X] Abnormal [ ]	Normal [X] Abnormal [ ]
Contralateral Acoustic Reflexes	Normal [X] Abnormal [ ]	Normal [X] Abnormal [ ]
Unable to interpret		

reflexes due to artifact	[ ]	[ ]
Unable to obtain/ maintain seal	[ ]	[ ]

2. Diagnosis

RIGHT EAR

[ ] Normal hearing

[ ] Conductive hearing loss ICD code:

[ ] Mixed hearing loss ICD code:

[X] Sensorineural hearing loss (in the frequency range of 500-4000 Hz)* ICD code: 389.11

[ ] Sensorineural hearing loss (in the frequency range of 6000 Hz or higher frequencies)** ICD code:

[ ] Significant changes in hearing thresholds in service***

LEFT EAR

[ ] Normal hearing

[ ] Conductive hearing loss ICD code:

[ ] Mixed hearing loss ICD code:

[X] Sensorineural hearing loss (in the frequency range of 500-4000 Hz)* ICD code: 389.11

[ ] Sensorineural hearing loss (in the frequency range of 6000 Hz or higher frequencies)** ICD code:

[ ] Significant changes in hearing thresholds in service***

NOTES:

* The Veteran may have hearing loss at a level that is not considered to be a disability for VA purposes. This can occur when the auditory thresholds are greater than 25 dB at one or more frequencies in the 500-4000 Hz range.

** The Veteran may have impaired hearing, but it does not meet the criteria to be considered a disability for VA purposes. For VA purposes, the diagnosis of hearing impairment is based upon testing at frequency ranges of 500, 1000, 2000, 3000, and 4000 Hz. If there is no HL in

the 500-4000 Hz range, but there is HL above 4000 Hz, check this box.

*** The Veteran may have a significant change in hearing threshold in service, but it does not meet the criteria to be considered a disability for VA purposes. (A significant change in hearing threshold may indicate noise exposure or acoustic trauma.)

3. Evidence review

In order to provide an accurate medical opinion, the Veteran's record should be reviewed, if available.

Was the Veteran's VA claims file reviewed?
[X] Yes [ ] No

If yes, list any records that were reviewed but were not included in the Veteran's VA claims file.

If no, check all records reviewed as part of this examination:
[ ] Military service treatment records
[ ] Military service personnel records
[ ] Military enlistment examination
[ ] Military separation examination
[ ] Military post-deployment questionnaire
[ ] Department of Defense Form 214 Separation Documents
[ ] Veterans Health Administration medical records (VA treatment records)
[ ] Civilian medical records
[ ] Interviews with collateral witnesses (family and others who have known the Veteran before and after military service)
[ ] Prior audiology reports
[ ] Other:
[ ] No records were reviewed

4. Etiology

If present, is the Veteran's hearing loss at least as likely as not (50% probability or greater) caused by or a result of an event in military service?
[ ] Yes
[X] No

Rationale (Provide rationale for either a yes or no answer):
The veteran's induction physical exam dated 05/10/66 indicated a mild hearing loss at 4000 Hz bilaterally. His seperation physical exam dated 09/19/69 indicated hearing within normal limits bilaterally with no change in either ear except the veteran's hearing at 4000 Hz did not indicate hearing loss at the time he seperated from the Army.

[ ] Cannot provide a medical opinion regarding the etiology of the Veteran's hearing loss without resorting to speculation

Provide rationale for reason speculation required:

Did hearing loss exist prior to the service?
[X] Yes
[ ] No

If yes, was the pre-existing hearing loss aggravated beyond normal progression in military service?
Right ear [ ] Yes [X] No
Left ear [ ] Yes [X] No

Provide rationale for both yes or no:
The veteran's induction physical exam showed a mild hearing loss in both ears at 4000 Hz. This loss was not seen during his seperation hearing exam in 1969.

5. Functional impact of hearing loss

NOTE: Ask the Veteran to describe in his or her own words the effects of disability (i.e. the current complaint of hearing loss on occupational functioning and daily activities). Document the Veteran's response without opining on the relationship between the functional effects and the level of impairment (audiogram) or otherwise characterizing the response. Do not use handicap scales.

Does the Veteran's hearing loss impact ordinary conditions of daily life, including ability to work?
[X] Yes [ ] No

If yes, describe impact in the Veteran's own words:
The veteran reports significant difficulty hearing and understanding conversational speech.

6. Remarks, if any, pertaining to hearing loss:

SECTION 2: TINNITUS

1. Medical history

Does the Veteran report recurrent tinnitus?
[X] Yes [ ] No

Date and circumstances of onset of tinnitus:
The veteran has been aware of his tinnitus for over 40 years. It is constant and in both ears.

2. Evidence review

In order to provide an accurate medical opinion, the Veteran's records should be reviewed, if available.

Was the Veteran's VA claims file reviewed?
[X] Yes [ ] No

If yes, list any records that were reviewed but were not included in the Veteran's VA claims file:

If no, check all records reviewed as part of this examination:
[ ] Military service treatment records
[ ] Military service personnel records
[ ] Military enlistment examination
[ ] Military separation examination
[ ] Military post-deployment questionnaire
[ ] Department of Defense Form 214 Separation Documents
[ ] Veterans Health Administration medical records (VA treatment records)
[ ] Civilian medical records
[ ] Interviews with collateral witnesses (family and others who have known the Veteran before and after military service)
[ ] Prior audiology reports
[ ] Other:
[ ] No records were reviewed

3. Etiology of tinnitus

Select answer below and provide rationale where requested:

[ ] The Veteran has a diagnosis of clinical hearing loss, and his or her tinnitus is at least as likely as not (50% probability or greater) a symptom associated with the hearing loss, as tinnitus is known to be a symptom associated with hearing loss

[ ] Less likely than not (less than 50% probability) a symptom associated with the Veterans hearing loss

Rationale:

[X] At least as likely as not (50% probability or greater) caused by or a result of military noise exposure

Rationale:
The veteran's MOS involved the loading and unloading of ships. He was exposed to noise from heavy equipment. While in Vietnam, he was exposed to noise from enemy rocket attacks. The relationship between noise exposure and tinnitus is well documented in the literature.

[ ] At least as likely as not (50% probability or greater) due to a known etiology (such as traumatic brain injury)

Etiology and rationale:

[ ] Less likely than not (less than 50% probability) caused by or a result of military noise exposure

Rationale:

[ ] Cannot provide a medical opinion regarding the etiology of the Veteran's tinnitus without resorting to speculation

Reason speculation required:

4. Functional impact of tinnitus

NOTE: Ask the Veteran to describe in his or her own words the effects of disability (i.e. the current complaint of tinnitus on occupational functioning and daily activities). Document the Veteran's response without opining on the relationship between the functional effects and the level of impairment (audiogram) or otherwise characterizing the response. Do not use handicap scales.

Does the Veteran's tinnitus impact ordinary conditions of daily life, including ability to work?
[ ] Yes [X] No

If yes, describe impact in the Veteran's own words:

5. Remarks, if any, pertaining to tinnitus:

NOTE: VA may request additional medical information, including additional examinations if necessary to complete VA's review of the Veteran's application.

Disability Benefits Questionnaire
Ischemic Heart Disease (IHD)

Name of patient/Veteran: Alvin Menie

Your patient is applying to the U.S. Department of Veterans Affairs (VA) for disability benefits. VA will use the information you provide on this questionnaire to process the Veteran's claim.

1. Diagnosis

NOTE: IHD includes, but is not limited to, acute, subacute, and old myocardial infarction; atherosclerotic cardiovascular disease including coronary artery disease (including coronary spasm) and coronary bypass surgery; and stable, unstable and Prinzmetal's angina. IHD does not include hypertension or peripheral manifestations of arteriosclerosis such as peripheral vascular disease or stroke, or any other condition that does not qualify within the generally accepted medical definition of ischemic

heart disease.

IHD encompasses any atherosclerotic heart disease resulting in clinically significant ischemia or requiring coronary revascularization.

Does the Veteran have ischemic heart disease (IHD)? [ ] Yes [X] No

NOTE: Provide only diagnoses that pertain to IHD.

Diagnosis #1:
ICD code:
Date of diagnosis #1:

Diagnosis #2:
ICD code:
Date of diagnosis #2:

Diagnosis #3:
ICD code:
Date of diagnosis #3:

If additional diagnoses that pertain to IHD, list using above format:

2. Medical history

Does the Veteran's treatment plan include taking continuous medication for the diagnosed condition? [X] Yes [ ] No

List medications:

Is there a history of:
Percutaneous coronary intervention (PCI) [ ] Yes [X] No
Treatment facility/date:
Myocardial infarction [ ] Yes [X] No
Treatment facility/date:
Coronary bypass surgery [ ] Yes [X] No
Treatment facility/date:
Heart transplant [ ] Yes [X] No
Treatment facility/date:
If yes, is it as likely as not that the Veteran's heart transplant is due to IHD? [ ] Yes [ ] No
Implanted cardiac pacemaker [ ] Yes [X] No
Treatment facility/date:
If yes, is it as likely as not that the Veteran's pacemaker is due to IHD? [ ] Yes [ ] No
Implanted automatic implantable cardioverter defibrillator (AICD) [ ] Yes [X] No
Treatment facility/date:

If yes, is it as likely as not that the Veteran's AICD is due to IHD?
[ ] Yes [ ] No

3. Congestive heart failure (CHF)

Does the Veteran have CHF? [ ] Yes [X] No

Is the Veteran's CHF chronic? [ ] Yes [ ] No

If the Veteran's CHF is not chronic, has the Veteran had more than one episode of acute CHF in the past year?
[ ] Yes [ ] No

Treatment facility/date of most recent episode of CHF:

4. Cardiac functional assessment

Has a diagnostic exercise test been conducted? [ ] Yes [X] No

a. If yes, provide level of METs the Veteran can perform as shown by the most recent diagnostic exercise testing:

Date of most recent diagnostic exercise test:

b. If exercise METs testing was not completed because it is not required as part of Veteran's treatment plan, complete the following METs test based on th Veteran's responses:

Lowest level of activity at which the Veteran reports symptoms (check all symptoms that apply)
[ ] dyspnea [ ] fatigue [ ] angina [ ] dizziness [ ] syncope

[ ] (1-3 METs) This METs level has been found to be consistent with activities such as eating, dressing, taking a shower, slow walking (2 mph) for 1-2 blocks

[ ] (>3-5 METs) This METs level has been found to be consistent with activities such as light yard work (weeding), mowing lawn (power mower), brisk walking (4 mph)

[ ] (>5-7 METs) This METs level has been found to be consistent with activities such as golfing (without cart), mowing lawn (push mower), heavy yard work (digging)

[ ] (>7-10 METs) This METs level has been found to be consistent with activities such as climbing stairs quickly, moderate bicycling, sawing wood, jogging (6 mph)

[X] The Veteran denies experiencing above symptoms with any level of physical activity

5. Diagnostic testing

Determination of cardiac hypertrophy/dilatation is required; the suggested order of testing for cardiac hypertrophy/dilatation is EKG, then chest x-ray (PA and lateral), then echocardiogram. Echocardiogram is only necessary if the other two tests are negative. A limited echocardiogram, if available, is appropriate to determine if cardiac hypertrophy/dilatation is present by measuring only left ventricular dimension, wall thickness and ejection fraction.

Is there evidence of cardiac hypertrophy or dilatation?
[ ] Yes [X] No

Diagnostic test (provide most recent test only):
[ ] EKG Date of EKG:
[ ] Chest x-ray Date of CXR:
[ ] Echocardiogram Date of echocardiogram:
[ ] Other study (specify):
Date:

Left ventricular ejection fraction (LVEF), if known: 55 %
Date of test: 2010

If LVEF testing is not of record, but available medical information sufficiently reflects the severity of the Veteran's cardiovascular condition, LVE testing is not required.

6. Functional impact

Does the Veteran's ischemic heart disease impact his or her ability to work?
[ ] Yes [X] No

If yes, describe impact, providing one or more examples:

7. Remarks, if any

Veteran had normal catheterization in 2010 per Columbia Heart records in CPRS. no evidence of IHD or CAD. Echocardiogram is not indicated as he does no have IHD. Nuclear stress test from columbia heart showed Normal LV function believe EF > 55% actual results not available.

NOTE: VA may request additional medical information, including additional examinations if necessary to complete VA's review of the Veteran's application.

STANDARD TITLE: C & P EXAMINATION NOTE
DATE OF NOTE: JUL 31, 2010@09:30 ENTRY DATE: AUG 03, 2010@10:41:51
AUTHOR: SAENZ,ALBERTO EXP COSIGNER:
URGENCY: STATUS: COMPLETED

SELECTED EXAM: Genitourinary.

The Veteran is a 67-year-old white male. He was in the Army from 01/07/67 to 12/17/69. The C-file was not provided.

HISTORY: He claimed to have a back injury during advanced training prior to being sent to Vietnam; fell from horizontal bars and was sent to Vietnam in April 1967. He has a history of hypertension, diabetes, prostate enlargement and chronic renal insufficiency.

He has a history of kidney stones removed in 1954 but denies any history of renal failure. At the present time because of prostatic problems he is on Flomax. He has a history of urinary incontinence (he wets his shorts sometimes) but he does not need any appliance like diapers or catheters. He claims erectile dysfunction and I think that is the reason why this GU exam is being requested.

He has been treated with Flomax but there is no history of cancer.

FUNCTIONAL IMPAIRMENT: He is retired. He retired on 05/09/09.

PHYSICAL EXAMINATION:
VITAL SIGNS: Blood pressure 143/85 on the left arm and 132/86 on the right arm. Height is 73 inches, weight 332 pounds.
GU EXAMINATION: Penis normal size with no evidence of gross abnormalities; no ulcers, no lymphadenopathy. Right testicle is soft, somewhat reduced in size, with no tenderness and no evidence of varicocele. The left testicle is somewhat reduced in size. Soft, with no tenderness and no evidence of varicocele.

The patient is obese, 332 pounds, and using a cane for walking.

Laboratory data: BUN 2, creatinine 1.2, PSA 1.1 and urinalysis is normal.

The physical examination overall was with no major abnormalities; To test his back, the elevation of the leg test (rising leg test) was positive for the right leg. Left leg wa normal.

Bilateral chronic stasis dermatitis was visualized.

OPINION: The C&P was done in regards to his claimed erectile dysfunction. An opinion was requested. Therefore, I will issue the following opinion in regards to his erectile dysfunction:

Erectile dysfunction secondary to multiple factors: Diabetes, age, medications (propranolol), obesity, so again, the erectile dysfunction could be multifactorial in this patient. Age, diabetes, obesity, and medication.

Again, this C&P was GU in regards to erectile dysfunction.

12/23/2010 SPINE
Priority of Exam: REVIEW
Examining provider: HAMME,JAMES
Approved By: wilson on 12/28/2010
Examination results:
SELECTED EXAM: Spine.

PRIORITY OF EXAM: Review.

CLAIMS FILE REVIEW: The entire claims file was sent and reviewed. There is an

171

---------- CP - Comp. & Pen. Exams ----------
(continued)

appeal of 11/16/2010, that was sent regarding his lumbar spine. There was documentation on 10/17/2008, that from lifting a john boat, he started having right leg pain with findings of an L4 and 5 cyst. There is a claim for his back, the date was not found. There is record of him working as an insurance auditor until April 2009. There was documentation of recurrent back spasms on 02/07/1969, then in August 1967 with negative straight leg raise. Then on 11/04/1967, of spasm, and 11/05/1967, severe pain of his lower spine and ortho exam that was silent of physical exam findings and a diagnosis of acute sprain. I did not find any ongoing treatment for his lumbar spine until the injury in 2008, that also showed stenosis and spondylosis. He does report chiropractic treatment from 1970-1980, however, I did not find that in his records.

Clinical exam of 08/09/2010, reveals lumbar spine spondylosis, degenerative disk disease with stenosis at L4 and 5 with subjective but no objective evidence clinically of radiculopathy.

OPINION: It is my opinion that his current diagnosis of his lumbar spine is less likely than not related to his complaints in the service. His service medical records show recurrent lumbar strain with negative findings of degenerative disk disease or spondylosis, and because records from 1970-1980 are missing, I am unable to link his current findings with that found on active duty.

301040/89110 cfp D: 12/23/2010 T: 12/23/2010 14:38 CT

08/09/2010 SPINE
Priority of Exam: ORIGINAL SC
Examining provider: HAMME,JAMES
Approved By: Davis on 08/11/2010
Examination results:
SELECTED EXAMINATION: Spine.

PRIORITY OF EXAMINATION: Original.

The claims file was not available for review. The issue is whether his degenerative disk disease and neuritis are related to his complaints of lower back strain due to injuries in July 1967 and February 1969. The Veteran brought in an MRI showing findings 10/06/2008 of spondylosis L4 and 5 with a cyst and L5-S1 and stenosis L2 and 3, and spondylosis L3 and 4. The Veteran contends that his records from 1970 to 1980, in which he received chiropractic treatment are missing from his records, and contends that his current condition is a result of his injuries in service. The onset was in the military due to injuries. He denies problems prior to the military.

CURRENT COMPLAINTS: He has constant 2/10 pain with radiation to the right leg that has resolved in the last 18 months. It affects his ability to walk to less than 100 yards. He does not report any prescribed bed rest due to this. He is receiving epidural injections that improve things for about 4-6 months.

ORTHOPEDIC TREATMENT: He has had no surgery. He takes Lyrica 100 mg twice a day with good response and Advil over-the-counter.

172

---------- CP - Comp. & Pen. Exams ----------
(continued)

FUNCTIONAL IMPAIRMENT: The Veteran is no longer employed. He does not report an effect on his occupation, but activities of daily living of chores and sleeping are affected. He has flareup pain that is severe 10/10 that occurs several times per week, and will last all day. He uses a cane and hand rails with good response.

PHYSICAL EXAMINATION: Range of motion of the lumbar spine, flexion with pain is 0-90, extension with pain is 0-30, lateral flexion right and left with pain is 0-30, rotation right and left with pain is 0-30.

The range of motion of the lumbar spine as measured above is not additionally limited following repetitive use. Examination of the lumbar spine is positive for mild paravertebral muscle spasm and tenderness. Straight leg raising is negative for neurological complaints. Motor is 5/5 with symmetric bulk and tone. His gastrocnemius muscles are 42 bilaterally. Deep tendon reflexes are 2+ and symmetric. Sensory examination is intact, and his gait is antalgic with a cane.

CLINICAL AND DIAGNOSTIC TESTS: Show spondylosis and degenerative disk disease with stenosis at L4 and 5.

DIAGNOSES: 1. Lumbar spondylosis. 2. Lumbar degenerative disk disease.

COMMENT: An opinion cannot be given. The claims file was not sent for review. The Veteran states that his injury in October of 2008 was from an attempt at lifting the front of a John boat, not the entire boat. Apparently, the Veteran has been seen on July 31 by neurology, and also on July 24, 2010. I did not find any documentation of that. Perhaps it was associated with his erectile dysfunction. I am not doing the erectile dysfunction exam as it has been done previously, but the Veteran said that it was diagnosed 17 years ago and his diabetes mellitus was diagnosed in 2006. See the GU exam, reference #273005, apparently done on July 24, 2010 for details.

If the claimant appeals and is representing himself or herself, the Judicial Department will prepare the additional copies of this form and serve this form on the opposing party. R.67-701B. Otherwise, file the original and four copies of this form with the Judicial Department. The appeal must be postmarked no later than 14 days from the date of service of the Hearing Commissioner's decision. R.67-701 and R.67-205. Attach the filing fee to this form. Attach a Form 32 if you are unable to pay the filing fee. Refer to R.67-701 through R.67-711 for additional information.

ATTACHMENT TO FORM 30

Alvin L. Menie v. State Accident Fund
WCC FILE NO: 0307461

1. That pursuant to S.C. Code of Laws §42-17-40, the Claimant requests a review of all of the Findings of Fact, the Conclusions of Law, the Order and Award and of all rulings and decisions made by the Commissioner at the hearing, as contained in the Record or as made at any unrecorded pre-hearing conference, and in any communications concerning the claim, Order, Award and Decision rendered by the Hearing Commissioner in this matter.

2. That the Hearing Commissioner erred as a matter of law in his application of the law under S.C. Code §42-1-160 and the application of the Claimant's burden of proof which is by a preponderance of the evidence and finding that the Claimant as a matter of law did not establish that he had sustained a compensable heart-related condition as a result of injury by accident stemming from the unusual and extraordinary conditions in his employment occurring just prior to and at the time of his first atrial fibrillation that resulted in his continuing and permanent condition thereafter.

3. That the Hearing Commissioner erred as a matter of law by allowing the testimony of Mr. Kirk Adair who was not employed with the State Accident Fund as an auditor or in any capacity during the time that was relevant to whether or not the Claimant's condition arose out of and in the course of his employment and constituted an injury by accident within the meaning of the Act. That testimony was irrelevant and immaterial and prejudicial to the Claimant as it compared totally dis-similar times in the Auditing Department. This would be similar to comparing the stress levels of military personnel stationed in Hawaii on December 7, 1941 to that of military personnel assigned to Hawaii on December 7, 1991.

4. That the Hearing Commissioner erred as a matter of law by allowing the testimony of Mr. Murphy in reference to any reasons for the Claimant's pay raise or interpretation of any of the documents in reference to the conditions in the Auditing Department and during the time the Claimant developed his heart-related condition and as to whether or not the conditions in that Department constituted unusual and extraordinary conditions in the employment.

5. That the Hearing Commissioner erred in making specific Findings of Fact in reference to the testimony of Ms. Holloman and that of the Claimant and citing that testimony without noting in the Findings of Fact that both Ms. Holloman who was an Auditor in the Auditing Department at the time that the Claimant's heart

condition came about and the Claimant's was that the conditions that existed between January 1, 2003 and March 3, 2003 (including but not limited to the fact that the Agency just prior to this time had announced the largest increase in premiums for the account holders that had ever occurred and that the Auditing Department as far as handling all of the functions had gone from three (3) Auditors to one (1) Auditor) wherein based on these facts and all the relevant facts at that time, in their opinions those work conditions for an Auditor in the Auditing Department constituted unusual and extraordinary conditions to the usual and ordinary job of the Auditor in the Auditing Department of the State Accident Fund at this time. There is simply no other evidence as to that condition at that time.

6. That the Hearing Commissioner further erred as a matter of law by not finding that the Claimant sustained an injury by accident due to unusual and extraordinary conditions wherein both the Manager of Administrative Services and the Deputy Director, Ross Gamble, in approving a performance pay raise on April 15, 2003 in reference to the time of the premium increase and the Auditing Department going from three (3) to one (1) Auditor to handle all of the functions of the Auditing Department stated, "you helped to keep these essential functions going throughout a period of transition caused by staff turnover and other extraordinary circumstances." There was also no opinion stated contrary to this and neither Ms. Flateau nor Mr. Ross Gamble were called as witnesses to further explain their opinion and therefore the Commissioner erred by not finding that the Claimant was exposed to unusual and extraordinary conditions where management thought the conditions were extraordinary.

7. That the Hearing Commissioner erred by making Finding of Fact No. 17 which is an error of law under law by finding that, "linking heart disease to work-based on what is unusual and extraordinary is impossible for a doctor to conclude, legally." This is a mis-statement of the law and under the uncontested medical evidence both from the psychologist hired by the Defendants to perform an evaluation who found that Mr. Menie, "appears to have suffered a cardiac arrhythmia from an accumulation of stress on the job"; and the treating cardiologist who found based on a review of the job responsibilities of Mr. Menie that in his, "job responsibilities and work load as set forth above and specifically between December 27, 2002 and March 4, 2003" stated to a reasonable degree of medical certainty was the, "cause of his onset of high blood pressure and the initial atrial fibrillation" and further that it was the, "physical and emotional job stress placed upon him by his job duties and responsibilities that was the cause of this condition." There is no medical evidence to the contrary. Again, it was his, "opinion to a reasonable medical certainty that Mr. Menie's cardiological problems of atrial fibrillation and high blood pressure were caused by the physical and emotional stress arising out of and from his job duties, responsibilities and work load."

8. That it was an error of law as not being based on the evidence and being on the basis of surmise, speculation and innuendo for the Commissioner to make Finding of Fact No. 18 in reference to the pressure that the Claimant was under and that it was not unusual based on the witness testimony. There is absolutely no evidence from any witness that the conditions to which Mr. Menie was exposed was not contrary to the usual and ordinary conditions of employment as an Auditor in the State Accident Fund during the period of time that was alleged to have resulted in his condition and in fact all of the testimony was to the contrary that the conditions were unusual and extraordinary in his employment during that period of time.

9. That it was an error of law for the Hearing Commissioner to making Finding of Fact No. 19 wherein he found that such conditions as labor turnover, illness of co-workers and computer problems are common in almost all work environments and are not unusual. This is a specific error of law and represents a total lack of understanding of the prior case law and our statutory law in reference to unusual and extraordinary conditions. In multiple cases including the case of Shealy v. Aiken Co., Stokes v. First National, Smith v. NCCI, and others wherein the Court has found all three (3) of these factors to be conditions that can constitute unusual and extraordinary conditions in the employment. This blanket Finding of Fact which is not a Finding based on the evidence and on applicable law is arbitrary, capricious and is evidence that the Commissioner's decision was based upon an abuse of discretion.

10. That the Hearing Commissioner erred as a matter of law by finding Finding of Fact No. 20 which is irrelevant to whether or not the conditions are unusual and extraordinary to which the Claimant was exposed.

11. That the Hearing Commissioner erred as a matter of law by making Finding of Fact No. 21 specifically where there is no evidence that the Claimant, "voluntarily took on the position" and it is further an error of law because the Finding that he was commended or received a pay raise for his work has nothing to do with and is irrelevant and immaterial to the decision of whether or not the Claimant sustained injury by accident arising out of and in the course of his employment due to unusual and extraordinary conditions and also further establishes that the Commissioner's Decision was arbitrary, capricious and characterized by an abuse of discretion.

12. That the Hearing Commissioner erred as a matter of law by making Finding of Fact No. 22 wherein he states that Dr. Hendricks saw the Claimant six (6) times in 2003 and 2004 and did not mention stress. This Finding is irrelevant but more importantly it is contradicted by Dr. Hendricks' testimony and evidence presented that when he first saw Mr. Menie in the hospital following his initial atrial fibrillation on March 3, 2003 he and Mr. Menie specifically discussed at that time that he was under a lot of job stress at work.

13. That the Hearing Commissioner erred as a matter of law both concerning his statement as to what a medical doctor may testify to concerning whether or not conditions are unusual and extraordinary and as to the doctor's opinion wherein the doctor stated that it was his opinion that Mr. Menie's atrial fibrillation and high blood pressure, "resulted from, as Mr. Gambrel put it 'extraordinary' job duties, responsibilities and workload of his job." Any expert may testify as to the ultimate issue in any case as a matter of law under our existing evidence law and the Commissioner's statement to the contrary is an error of law and must be reversed.

14. That the Hearing Commissioner erred as a matter of law in making Conclusion of Law No. 2 wherein such Conclusion of Law is contrary to the established precedents under S.C. Code §42-1-160 as to the establishment of a heart-related condition as being due to unusual and extraordinary conditions.

15. That the Hearing Commissioner erred as a matter of law by not finding the claim compensable where the employer had agreed to accept the claim in principle following the accident when the claim was filed.

16. That the Hearing Commissioner erred as a matter of law in making Conclusion of Law No. 3, 4 and 5 all of which are based upon Conclusion of Law No. 2 that he did not sustain an injury by accident upon which these Conclusions of Law are based.

17. That the Hearing Commissioner erred as a matter of law by making Conclusion of Law No. 7 which is also based upon the decision that the Claimant did not sustain his burden of proof of proving as a matter of law that he had sustained injury by accident as a matter of law under the Act.

18. That the Hearing Commissioner erred as a matter of law by finding that the Claimant had not established that the conditions of employment were unusual and extraordinary where he does not state why each of the issues and conditions as presented to his treating doctor were not unusual and extraordinary.

The above-referenced exceptions are subject to amendment upon receipt of the Transcript.

Respectfully submitted:

Preston F. McDaniel (pfm)
