Lexington County Sheriff's Department

VOLUNTARY STATEMENT

(Not Under Arrest)

I, Worth Edward Cook III, am not under arrest, nor am I being detained for any criminal offenses concerning the events I am about to make known to Det. J. Kamfort.

I volunteer the following information of my own free will, for whatever purposes it may serve, I am

26 years of age, and I live at 815 Lee Gunter Rd Leesville, SC 296

Alternate Contact Name: my cell Phone (H) (803) 551-4000 (C) _____

Alternate Contact Name: Sharon tart Phone (H) (803) 391-3796 (C) _____

I met David at Jackie Bowers house he was riding a 82 honda that wasn't charging the battery. I spoke up that I was a mechanic and worked on bike and cars at my home and portabaly. Jackie backed me up sayin that I did a mechanic work real good, so he decided that He would get me to work on not only his bike but his truck. So we left jacks and I followed him to his (house/mons/ or brothers) one of these not sure who owns it. He told me then that he had to go meet a chick so I asked what he wanted me to do and he asked me and rich to follow him there and he would put gas in his ricks wheel. we did only because I needed the work and he was paying fuel. So we followed him threw pelion to a chick place then he asked us to follow him to another chicks place and it turned out to be on hush river at a hotel we sat there a little then left and got back to his (mons/ Brothers) house and then we loaded his bike into his truck and he invited us to meet

his mom. he was proud of her cage she was in her 90's. When we left to go out side from there rick left and I helped David strap on his bike then me and him loaded up and road to my place. When we got there I put a new ~~new~~ use battery and recharged on the bike. He went to test ride it and then I started working on his truck I had to remove the down pipe from the header and weld the flex tube under the mount flang. after he got back he paid me in part with ~~a~~ some cash and some heroin to trade for cash later. we loaded up the bike in his truck and He left all happy cause he was gain towards orange burg to meet some chick to ~~make~~ make money to pay some fine. he had back up north and re up double what he had in drugs.

I have read this page, initialed corrections or changes, if any, and received a copy of this page. I certify that the facts contained herein are true and correct to the best of my knowledge.

I HAVE READ THIS STATEMENT OF MY RIGHTS AND I UNDERSTAND WHAT MY RIGHTS ARE. W.C. I MAKE THE FOLLOWING STATEMENT:

After I got done workin on the bike and truck daniel gave me 80 bucks and a few bags of heroin but didn't have all the money for the labor. He wanted to go so he'd could make sales to a chickie that would make him enuf to reup cable when he when home up north. He left me ^{W.C.} 2 kinds of ^{W.C.} pre paid type ^{W.C.} Bank cards to hold till he came back to pay me for the rest. When he didn't come back for a few days maby a week I decided to use them to try and make a buck.

VOLUNTARY STATEMENT

Page 2 of pages.

I was with Rick one night he picked me up I told him I would get him gas in his van. Seance De David didn't come pick up the cards and with out Rick I paid for the fuel in the van. later that night Rick gave me ride to wallmart and I used the cards to pay for some cipors and wifes to see if it still worked. I got the cipors so if they didn't ~~work~~ let me return them for the money that I would keep them for use. Rick didn't know I had them and argue with me about usage. I said that David owes me the money and it wasn't my fault he didn't come back and pay me and I used it. And signed a fake name.

Q: DET. NOVAE

A: WORTH COOK

Q: WHY DIDNT YOU TELL US ABOUT USING DAVID'S CREDIT CARDS TO BEGIN WITH?

A: Because David left me the cards to hold for the money he owed me and after he didn't come back for several days maybe a week I used them to purchase, maybe 100 bucks worth of stuff and didn't want to be in trouble for using the cards, with out direct permission with David.

I have read this page, initialed corrections or changes, if any, and received a copy of this page. I certify that the facts contained herein are true and correct to the best of my knowledge.

REQUEST: look I told / tried to tell my public defender about what I'm
about to tell you. They (public defender) office told me not to talk to gall any
more well they won't come here and see me about the info I have for gall.
And the more time that goes by the ~~harder~~ harder its going to get. I know this
may upset you but I told gall a few lies, believe it or not. Any way I didn't
really kill David at all. I can prove it too. I wanted to be truthful about
it but Richard Barnes does work like collect money for people, make people keep
there mouth shut and he always seems to know what to do or say. He is alot
smarter then he seems. I had to sober up from all the meth and Hellasgimics

that my body was full of. I really did fill like every part of this was like a movie during the days yall were questioning me. But I had been on a several week beange and it takes a good week or so to get your mind back after that. Well I'm sorry for not tellin yall the truth but that's got me in a real bad situation a well. Rich would of killed ~~me~~ me and my wife if I had told yall the truth. I'm still havin bad dreams about what I seen him do its raff dillin with it and dillin with havin to be so far from my wife and daughter that I do truly car a lot about, and love dearly. He has done work for the mexicans that deliver all the pot to the pot man right across the county line by my house. I've heard from him so many stories about how people have turned up messing, ended up in the swamp, here, in Alabama, Florida, all by his doing. Hes done work like that for the warlocks. He even told me how he had two dudes he sold drugs for killed so that he could make more money years ago when he almost went to prison but ended up getin drug court for trafican drugs. ~~Getin~~ read of them 2 was how he got the drugs. Any way you see after he killed david I beleaved every bit of it. He has two sides of himself one that cool and one thats explosive and mean, cruel, abusive. He thanks the ~~whole~~ hole world owes him something. Well after getin her and my daughters life treatend ~~a~~ several time Shanman (that traley didn't ~~and~~ and don't know what happend she never even met david) moved far enuf away to keep our child and herself safe. Even my mom has been treatend and ran off the road because nicks "brothers" don't want me to tell the truth. Well now I know my familys safe. I know that yall ain't goin to lock my wife up ~~and~~ and cause us to loss or baby. I thank its time to tell the truth. No body has ~~tre~~ treatend them seance they have relocated thank God. So I will let you know two things that yall been wantin to know that will prove that ~~that~~ I didn't kill David and. After yall check them out and see

and david's wallet. Rich last I seen had them in a book bag near the little tool shed behind his dad's house. So now you know where the murder weapon is and his wallet. If Rich didn't kill him then why would he have those two items? Go get them and do use both a favor and don't coach me when I write the next statement you know I really didn't know half the stuff till gall told me. It's really not nice to do some one down of all them mind altering drugs like that especially when they been in shack from such a horrible thing. You where wrong for that even if you do fill its your job. Well any way God Bless you and thank you for your time.

P.S. I hope you didn't let him get that van back theres a thing or two you gain to account to know about that van and his blood fetish as well. Hopefully I will see gall soon with good news, and I really need to say thank you for one thing. I've found God and truly have felt the Holy spirit touch my heart. That proves we are all part of Gods almighty will and path. Praise God, and ride save. Thank you again for your time.

to go pick up his ole lady and my ole lady from my place and I take them to hang out at his house so that we could all get high at my place with out havin to dill with the weamon bitchin or at lest so I wouldn't have to be tryin to hide getin high from my ole lady. Seance she had been quite and I was supose to have already stoped but hadn't well after ~~W.C. Dick~~ W.C. Dick left to dawes me and dave whent to jachies to to get some more crystal meth. Dave got him a hote a gram and me a half a gram from jackie at first. Dave done his half completly before we left and got another hote gram. He didn't have to pay for it because jachied owe him money for a bunch of hairon he had from to her to sell. Because he was wanting to smoke while we was on the way to my place and he didn't know the way I drove while he rode in passenger seat. All the way to my place he smoked meth and hairon. He even held the stearing wheel for me to hote the meth a few times. At this point I still haddn't got the nerve to try the hairon yet. So I hadn't done any. When we (me and daved) got back to my place. We whent ~~in~~ ^{W.C.} the house (my house) and smoked a little more meth. By that point Daved was almost out of meth and I only had maby a ~~quater~~ ^{but} quater of a gram left of what he gave me so seance I had a jar of ricks liquid that hadn't been smoked of get out in the shead I told daved about it and we whent out there. At that point we un loaded the bihe

and I changed the battery with a good one and it still didn't charge so I changed the rectifier (some times called the voltage regulator) and the bike started charging the battery itself. I put a new gas tank on the bike that had come off a harley sportster. He was very pleased with the work that I'd done. He went on a test ride on his bike. while he was gone I snatched of the liquid that rick had left and got about two grams of dope from it maby 3. Dave pulled back up as I was drying the dope in a coffee filter so it would be ready to smoke off some aluminum foil. so then we went back in to the living room and smoked some. Then Dave went back out side to look for his hairon he had in his truck. I heard him as he was on his way back in the house he was cussin and rasing hell. he accused me and rick witch at this point wasn't there it was just me and dave at my house) I tried to reassure him I hadn't takin none of his dope. we ended up getin kinda loud and fighting because dave was threatening me with a knife. He ended up cut some where around his wright shoulder and ~~we~~ started saying he was done fighting so we stopped. He was real upset still but I gave him a rag to hold over the cut and started trying to come him down reassuring him that I didn't have his dope and that I would call the 911 but he said he couldn't because he was on pro bation in ~~the~~ phillie and would get violated if he got in trouble that and

seance he admitted to having be the one in the wrong and with the nigre that he wasn't goin to get no shit started. All he wanted was his dope back and he would leave. Well I let him look any where he wished to prove I didn't have it. And by this point I was pretty sure Rick probley did it. Dave hadn't lost it while he was high as fuck. so there was a little blood here and there from us fighting. And I knew that my ole lady would be back soon with Rick. Well Dave said he wanted to just be alone cause he was hertin and he wanted to look threw the truck agin for his dope and the shead. So I started wipin up the mess that was made. from the cut Dave had and blood from his lip/mouth where I had hit him while we was fightin.

TOOK A BREAK 1816 hrs → 1832

I had just changed my shirt where it got ture some then Rick pulled up, his ole lady wasn't with him and my ole lady came inside she new instantly that I was high and whent in the room where the tv. was. I whent outside to stop Rick on his way in the house so I could tell him what happend about the second I did it when Dave came to where we was standing. Rick was pissed about me given Dave all the rest of ~~the~~ at the dope I had smoked of with out Rick's permission. When Dave started

asking about his hairon that was messing rich told him that he had takin his hairon but he didn't know why he had said he just done it cause he was high and that he would let him follow him to where he had his dope. Dave was still mad but said that he understude that some times you can do stupid shit while your high. So we loaded up the bike and dave gave me ~~me~~ 80 bucks and 5 small bags for workin on his bike. He followed Rich and they left. It was a few hours befor I herd from rich. Me and shannin was in our room when I heard rich pull back up in daves truck. Shannan was asleep I went outside Rich said he was gon to leave ~~me~~ daves truck there untill he get home. He had me unload (help) the bike and he left. The next day rich come back for awhile and ~~me~~ was gon to cook some dope. So I stayed in the house and laid in the bed with shannan for a little but when she dosed off I got up and set in the living room and lisend to the radio shortly after that rich come in the house. I asked him about the truck and he just said it was cool that dave ~~me~~ didn't need it. We smoked some dope and he halled ass. This happend during the mornig after noon time. He came back later with a touch that he uses to cut ~~me~~ scrap and ~~me~~ started disasibling parts from the truck. He got ~~me~~ a good chunk done and ran out of oxygen.

he left to go get more oxagin. While he was gone I helped separate the aluminum from the motor area. Since he asked me to and I didn't want any trouble at this point I was pretty nervous about the truck and Dave and how rich wouldn't talk about any of it just smile and say Dave didn't mind. Only one other that he seen he just said that he bought it from a junkie and that's what I was supposed to say if any one asked me any thing about it. When rich got back with the oxagin he cut the truck a few more pieces and had me help him load it up in his van. He hauled it to Tempel. He took two loads off that day. By the time he was done the only thing left was the cab of the truck and the engine. Then he went home. Early the next day the cops (dark in early morning hours) showed up and my dr lady got arrested for an pair times. When I told the ~~police~~ ~~that~~ rich that police had been there and looked all threw the house and heard he flipped and came to get the cab cut up after I insisted that it had to go. He was pissed when he got there and asked a lot of questions the bike was taken apart in the van and he put the truck cab in there after cutting it in four pieces and left. He left the 86 450 rebe there I got from him even though he keep arguing with him self about doing that. I had taken

a four wheeler front end and put it on the rebel because when Rick gave it to me to build the reverse 3 wheeler out of the front end was gone along with the triple tree neck. But he ~~told~~ me not to be lettin people see me on it. At the time I didn't like the way he was talkin about it but already planned to ride it around because I didn't have a way to go. After he found out I had been riding it he took it and loaded it in his van. That's when he told me he had made Dave "walk the plank" which is his way of say he killed him. He started tellin me how he had killed him with a hand held ~~sword~~ ^{d.c.} sword or knife type dull like he collects. He said he had cut him and stabbed him and then he said that Dave wasn't movin any more but kept ~~in~~ ⁱⁿ twitchin and stuff so he stabbed him in the eye. At that point I made him stop talkin about it. It made me sick to think that Rick had truly killed Dave. Dave wasn't a bad person he just like gettin high like the rest of us junkies. Later on I found out that Rick had unloaded the bike in the woods near my house on some farm property. I went and got it and took it apart and sold it for junk because I wasn't sure about where he had got it and just wanted all the things Rick had at my place gone. I told him about that and he got all pissed and said he was going to step cockin any day around me

because he didn't trust me any more. After that point Rick only came around to check on me know and then. He would smoke a little dope with me talk for a min or two then leave sayin he had shit to do and didn't have time for some one that doesn't want to be his pirate brother any more while he rode around stealin and findin abandon scrap metal any more. That's when he started cookin at his house.

Before he done that befor I ~~can~~ get the time line mixed up. The day before this was a Sunday night early Monday mornin. Rick came and picked me up so I and him could go get high. He had some credit cards and told me Mr. [unclear] got them from Dave's wallet. He first drove to the Hillview Cof/Truck stop at exit 39 and I/20 he told me to fill up the gas tank with the card at the pump and he would give me 50¢ on every dollar that it took at this point I didn't know Shoppin would get out on time served from having contractions on the fifth so I needed the money. So I did so. Then he tried to get me to get some cartoons of cigarettes on the same dill, then he would give me 50¢ on the dollar for them but he didn't cause the card was turned down. Then we went to jachies and Rick keep pushin me to get other people to try and by gas for 50¢ on the dollar off the card. No one would so we left and went to wal mart and he wanted to see it

we could buy some more stuff on the card. He said if they will let us pay a little bit of stuff then we will go back ^{with him} and get a lot. I don't like it but he did. I grabbed a ~~cro~~ crop pot first and then he stopped me told me that I should get baby stuff incase we can't take it back then I could keep it. We argued about this because the way he was getting was makin me very uncomfortable makin me fill like I was being pushed to do this. But if did ^{we} we which should to pay about 50 or 60 buck worth of stuff. Then we went to the Van. We almost got in a fight because he was wanting to go back in there and get more. I didn't see some thing just didn't feel wright but he got mad and we ended up ⁱⁿ it agin. He suggested buyin a crib and I didn't bother to put up much fight cause I just wanted to be done with it. I still know that he wanted me to get the baby stuff so it would help tie me to the carcs ^{w.c.} ~~w.c.~~ ^{w.c.} We didn't get to ^{w.c.} By the crib and he never tried to carry the other things we got to the walmart to get the money back on a gift card like he had said we would. We havnt been close since then and the next day when he found out I found the 3 brother I hope and pray this get figured out cause he truly has a good store set up to make me look bad.

center mount handle . The knife had been on the counter in the kitchen earlier that evening where we had used it to cut a few lines of dope out to sport. When he came at me again he tried to cut me again but I had a hammer that I hit him with in the head with the flat side of the hammer ^{flat side} when he fell after 2 blows to the head he fell on the floor. Instantly I jumped on his back. He yelled out in pain but then just lay there breathing heavily. One of the blades was stuck in the lower front side of his ~~neck~~ neck area. At that point I was scared as a mother fucker. He was bleeding a good bit on to my floor in the living room. And there was blood in other places. So since at that point I drag him in the back off the house so my ole lady wouldn't see and quickly covered up/cleaned up the mess the best I could and changed my shirt. At that point I do believe that David was still alive because he was breathing. When Rick pulled up my ole lady came into the front of the house she was mad because I was high and went to her room. Rick came in and I got him to come outside and talk to me. I told him about how David had attacked me and he was upset. He was mad over his dope that I had given Dave to try and come him down that dope was gone at this point. Shortly after that Rick left said he would be back the next day. I went in to the back of the house to check on Dave. He was breathing and it was freakin me out.

Then all of a sudden he kinda set up started trashin around and makin a lot of noise. That's when I panicked I was really high and when he moved and set up and was trashin his ~~arms~~ it scared me and I couldn't think of nothin to do I just platted the knife out his neck and stabbed him a few more times he quite ~~was~~ ^{w.c.} movin so much. But by that point I knew he was hurt to bad way to bad. I was cryin and layin on top of him. Something just kept tellin me that I couldn't let him suffer any more that it wasn't wright for him to be in that kind of pain. So I stabbed him in the eye not because I was made not to be doin it but just to make it stop. to end his pain that by no means I intended to cause. I liked dave and I didn't and or hadn't thought this all would happen. I wish it hadn't life hasn't been the same seance it did. I cry my self to sleep and wake up scared. I stay so sad that I don't talked much. I buried him in the back yard. Rick is the only person that knew I killed dave. Rick helped and done most of the work on the scrapin of the truck and bike. I never seen any of the money rick made of the dave he stole from dave that caused this hole thing to happen. From what dave said it was a hole lot. And it was rick that pushed me into the idea of using the credit cards. the cards are gone I threw them out some where. The knife most likly ended up at the scrap yard of thrown out some where. I was such a nerves wreck after all this I couldn't figure out what to do or where to do it. I really most say

One more time that I didn't want this to happen to no one. I didn't want to hurt Dave at all and wouldn't have if he hadn't attacked me over his dope gettin stolein by Rick. And No one knew the truth or even had a idea about what happened but me and Rick. We just told every one that seen the truck and bike before and while we was scrapin it that we bought it from a junkie. Rick was always sayin to just keep my mouth shut and it would all go away. I wasn't gon to ever say a word I was scared of what would happen to my family it was something that happened so fast and so quick and crazy that I just was lost about what to do the hole time. I'm sorry and releved to be able to tell the truth. I hope some day that Daves family will forgive me just like I hoped my family will too. I was just tryin to stop him from hurtin me and it just went too far. I wish it was different but I just don't see why it all had to happen to me and Dave. I didn't ~~take~~^{w.c.} take his dope and he didn't do any thing to deserve Rick takin his dope. I wish I could or would have just ran away when Dave tried to attack me but I couldn't get away from him. He just wouldn't stop!

Q- WHEN DID YOU PUT THE BAG OVER DAVE'S HEAD? (16)

A- After I stabbed him in the eye to keep from makin to much a mess. the bag was just layin on the floor next to him and it did take much thought after I stabbed him I just did it. w.c.

Assessing the Involvement of Anatomical
Structures in Penetrating Trauma
Probabilistically

Omolola Ogunyemi
Center for Human Modeling and Simulation
Department of Computer and Information Science
Univ. of Pennsylvania, Philadelphia, PA 19104-6389

April 1997

Abstract

To determine the type and magnitude of injuries involved in penetrating trauma from gunshot and stab wounds, a working knowledge of the relationship between human anatomy, physiology, and physical manifestations of injury is required. With ballistic injuries involving multiple entry and exit wounds, determining the extent and type of injuries is made even more difficult as many different trajectories could produce the same external wounds. This work presents a 3D graphical system that allows the user to visualize different bullet path hypotheses as well as stab wound paths in a 3D model of the human body, and to identify the anatomical structures affected for each path. The system also presents the degree of belief that an anatomical structure associated with a given penetration path is injured, expressed as a probability. It is designed to work both with TraumAID (a system for providing decision support in the initial definitive management of trauma) and MediSim (a system that simulates casualties, medics and interactions between them).

Chapter 1

Introduction

Penetrating trauma is responsible for a large proportion of civilian deaths in the United States and is a major cause of battlefield fatalities. There is evidence that early administration of expert care to victims of penetrating trauma would considerably reduce the number of deaths due to these injuries [36]. In dealing with penetrating injuries, physicians are generally concerned about the anatomical structures affected, as the types of injuries to vital structures could determine a patient's treatment and chances for survival. Determining the extent of injuries is made difficult in the case of multiple gunshot wounds because many different pairings are possible for entry wounds to exit wounds or entry wounds to bullets lodged in the body.

In this work, we present a 3D graphical penetration path assessment system that enables users to visualize different bullet path hypotheses and stab wound paths, using a rotatable 3D model of the human torso. The system identifies the anatomical structures affected for each path and presents the degree of belief that an anatomical structure associated with a given penetration path is injured, expressed as a probability (within confidence limits). By displaying 3D models of gunshot and stab wound paths and injured organ possibilities for a given set of wounds, the system provides a visual cue to their potential consequences; a kind of virtual CT-scan. This can help in bridging the gap between knowledge of the anatomy involved in a particular injury and the physiological manifestations associated with that injury.

1.1 Penetration Path Assessment System Overview

The penetration path assessment system is based on Leonard Karpf's ideas about model based penetration path calculations [23]. It extends this work by providing a graphical user interface with a 3D torso model on which injuries can be simulated, different injury hypotheses generated and assessed probabilistically, and by presenting the user with both visual (graphical) and written feedback about injury assessments. Probabilities generated by the system make the feedback more precise by quantifying the likelihood of damage to affected structures.

In assessing gunshot wounds, the goal of the system is to present an initial space of penetration possibilities¹, and so ballistic characteristics such as bullet type and velocity are not considered in assessing injuries. Although the system can assess the effect of bullet ricochet off skeletal parts, issues such as bullet fragmentation and the impact of secondary projectiles from bullet or bone fragments are not addressed within the system. For an examination of these and other related issues, see [15, 16, 17, 18, 33, 37].

The focus of the current penetration path assessment system has been on addressing penetrating injuries to the chest and abdomen, as some of the most life-threatening penetrating injuries affect these regions. We believe that a more uniform treatment of penetrating injuries to different areas of the body would be desirable and so we plan to extend the system to deal with injuries to the limbs and head.

¹Note that penetration possibilities (i.e., the possibility of damage to particular anatomical structures) combined with signs and symptoms observed in a patient determine injury possibilities. For example, lung puncture accompanied by the appropriate signs and symptoms in a patient might lead to a diagnosis of tension pneumothorax, simple pneumothorax or both.

Chapter 2

Anatomical and Geometric Models

2.1 Definitions

The penetration path system determines possible involvement of anatomical structures in multiple penetrating injuries using 3D models of wound paths and anatomical structures. We refer to the three-dimensional models of wound paths as *wound path spaces*. For gunshot wounds, a wound path space is the space of possible trajectories from an external wound to another external wound, a bullet lodged in the body, or a skeletal nick. For stab wounds, a wound path space is the area potentially affected by an instrument used in a stabbing.

2.2 Representation of Anatomy

The organs, skeleton, and skin for the three-dimensional torso model currently used in the penetration path assessment system are polygonal surface models developed at View Point DataLabs. Polygonal surface models of major blood vessels (descending aorta, carotid and subclavian arteries, etc.) were developed in-house based on reconstructions from CT-scan data using *SPAMMVU* and descriptions from anatomy texts [1, 21, 22]. The outer skin model currently in use is a polygonal mesh of a female torso. The torso model is a fixed size model of an "average" female.

The three dimensional models used by the penetration path assessment system are displayed in *Jack*[®][2], a graphical system for displaying and animating both articulated and non-articulated figures given their polygonal surface representations.

Since injuries produced by a similar set of surface wounds on two people of different sizes or shapes will tend to differ, we plan to introduce body models that vary in size, shape, and as possible, relative placement of organs. We also plan to take advantage

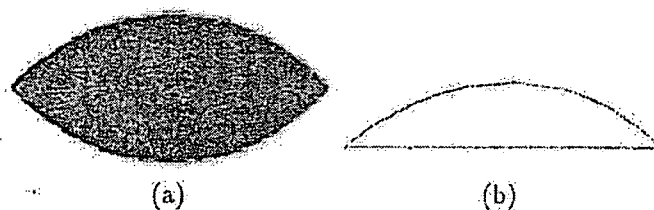

Figure 2.1: 3D gunshot wound path space and a 2D circle section.

of the Visible Human data set in order to provide complete models of both the female and male anatomies. With these updated models, we could address injuries to the entire body.

2.3 Gunshot wound representation

To simplify issues of representation with respect to gunshot wounds, we identify two basic types of gunshot wounds through a body:

- *Through wounds* which consist of an entry and an exit wound and the path taken by a bullet from the entry to the exit wound.
- *Partially-through/Interior* wounds that consist of an entry wound, a bullet lodged in the body and the path from the entry wound to the bullet.

Both of these cases are represented with the same three dimensional wound path space model (see Figure 2.1(a)), with the wound path space oriented in such a way that one apex corresponds to the entry wound location and the other to the exit wound or bullet location. The wound path space model is created by taking a chord of a circle and the arc subtended by the chord (Figure 2.1(b)) and rotating the two-dimensional figure obtained 360 degrees about the x-axis to form a three-dimensional figure. We fix the ratio of the wound path space model's length to its diameter at 100:18, based on values obtained from [4, 15] of the dimensions of permanent and temporary wound cavities produced in injuries involving projectiles. Thus the basis of the gunshot wound wound path space model is a combination of hypotheses about the possible paths taken by a projectile and potential cavitation effects that result from the projectile moving through body tissues.

In the two cases mentioned above, bullet trajectories are assumed to follow a continuous line/curve. The wound path space representation reflects the maximum expected deviation (from a straight line path) of a continuous line trajectory.

To model the region affected when dealing with bullet ricochet off bone, we consider two pairings – one from an entry wound to a particular area of the skeleton and another from this area of the skeleton to either a bullet lodged in the body or an exit wound. The result is two wound path spaces like the one in Figure 2.1(a) joined end

to end: one wound path space has an apex at the location of the entry wound and its other apex at the area of the skeleton nicked by the bullet. The second wound path space has one apex at the skeletal nick and its other apex at either a bullet location or an exit wound location.

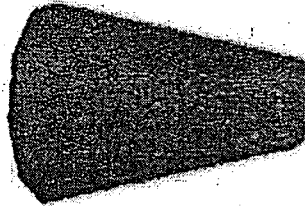

Figure 2.2: Stab wound path space

2.4 Stab wound representation

Two simplifications are made in modeling the wound path space for a stab wound. The first is that we assume we are dealing with a fixed length blade.¹ The second involves constraining the possible directions of penetration of the blade: given a stab wound to the anterior, posterior or lateral torso, the stab path is placed perpendicular to the skin surface at the point of the stabbing.

The wound path space representation for a stab wound is a truncated cone or frustum (Figure 2.2). The smaller base of the frustum is positioned at the blade's entry point, and the wider base is placed internally in such a way that the frustum is perpendicular to the skin surface. The vee shape of the wound path space reflects uncertainty about the limits of the direction of penetration of the blade to the left and right of the axis perpendicular to the blade's entry point on the skin surface; and the wound path space's circularity represents uncertainty about the orientation of the blade about the axis perpendicular to the entry point on the skin surface.

¹We refer to the penetrating part of an instrument (knife, screwdriver, ice-pick, etc.) used in a stabbing as a blade.

Chapter 3

Injury Generation and Assessment

3.1 Introduction and Definitions

In the case of gunshot wounds, one or more wound path spaces may compose a *penetration path hypothesis*. For example, consider a patient presenting with four external wounds to the chest: two anterior (left and right) and two posterior (left and right). If we assume that these correspond to two through wounds (i.e., the patient was shot twice and each bullet entered and exited the body), there are three possible hypotheses (Figure 3.1):

1. The left anterior wound and the left posterior wound are part of the same wound path space, similarly for the right side (i.e., the wound path spaces are parallel from anterior to posterior).
2. The left anterior wound and the right posterior wound are part of the same wound path space, and the right anterior and left posterior wounds belong to the same wound path space (i.e., the wound path spaces cross).
3. The left anterior wound and the right anterior wound belong to the same wound path space, similarly for the left and right posterior wounds (i.e., the wound path spaces are parallel from right to left).

These three hypotheses yield markedly different potential consequences for a patient. The third would result in mainly superficial injuries whereas in the first case there would be the danger of injury to the lungs and abdomen, and in the second there would be danger of injury to the lungs, heart, abdomen and major blood vessels. If we instead assume that the four external wounds described above correspond to partially-through wounds (i.e., the patient was shot four times and there are four bullets lodged within the body), we get a total of twenty-four possible hypotheses.

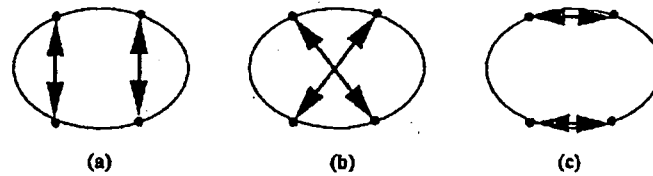

Figure 3.1: Three penetration path hypotheses for two through wounds

3.2 Generating penetration path hypotheses

Determining the wound path produced in a stabbing is straightforward given the simplifying assumptions outlined in the preceding chapter; we only need to consider a single wound path space originating from a surface (stab) wound. Multiple gunshot wounds, on the other hand, are complicated by the fact that all possible pairings of external wounds and bullets must be considered. Determining which of the competing sets of pairings is most accurate must be based on further evidence (tests, e.g., roentgenographic results) provided by a physician.

Each set of pairings of external gunshot wounds and bullets forms a penetration path hypothesis. Given just one external gunshot wound (i.e., an entry wound), only one possibility exists: there must be a bullet lodged in the body. In this case, a single path can be postulated from the entry wound to the bullet and we have just one penetration path hypothesis. With two external gunshot wounds, we could have a pairing between the two external wounds, which means that one of the wounds must be an entry wound and the other an exit wound, or we could have two pairings from two separate entry wounds to two bullets retained in the body.

If we have a total of i external gunshot wounds and j through wounds involving $2j$ of the i wounds, then the number of ways of choosing a set of pairings of external wounds is

$$\frac{\binom{i}{2} \binom{i-2}{2} \cdots \binom{i-2(j-1)}{2}}{j!} = \frac{\prod_{k=0}^{j-1} \binom{i-2k}{2}}{j!} = \frac{i!}{2^j j! (i-2j)!} \quad (3.1)$$

(for $j = 0$, $\prod_{k=0}^{j-1} f(x) = 1$). So for instance, given four external wounds as in the first example of section 3.1, and the knowledge that only one through wound exists, we get $\binom{4}{2}/1! = 6$ possible pairings. That example shows the number of distinct pairings possible (3) for four external wounds given that there are two through wounds. Given i external wounds and j through wounds, where $i > 2j$, the remaining $i - 2j$ external wounds are simply entry wounds, and so there must be $i - 2j$ bullets present in the

body. Since we very likely do not know which entry wounds match which bullets, we need to consider all $(i - 2j)!$ possible permutations. This term becomes very large as the number of bullets increases. The number of penetration path hypotheses, given a total of i external gunshot wounds and j through wounds is

$$\frac{\prod_{k=0}^{j-1} \binom{i-2k}{2}}{j!} (i-2j)! = \frac{i!}{2^j j!} \quad (3.2)$$

In the event that the i external gunshot wounds are all partially-through wounds, the formula above reduces to $i!$ as the example in section 3.1 involving four partially-through wounds illustrates (there are $4!$ or 24 possible hypotheses in this case). The table below gives the number of penetration path hypotheses given i external wounds, j through wounds (j may be 0), and b bullets found internally (where $b = i - 2j$):

i	$b = 0$	$b = 1$	$b = 2$	$b = 3$	$b = 4$	$b = 5$
3		3		6		
4	3		12		24	
5		15		60		120

Table 3.1: Hypotheses given i wounds and b bullets

Blank values in the table represent combinations the system rejects as inconsistent, for example, having the total number of external wounds and bullets sum to an odd number.¹

If we don't know how many through wounds or bullets there are, we can sum the number of different penetration path hypotheses possible starting from $j = 0$ to $j = \lfloor i/2 \rfloor$, where i is the total number of external gunshot wounds:

$$\sum_{j=0}^{\lfloor i/2 \rfloor} \frac{\prod_{k=0}^{j-1} \binom{i-2k}{2}}{j!} (i-2j)! = i! \sum_{j=0}^{\lfloor i/2 \rfloor} \frac{1}{2^j j!} \quad (3.3)$$

The results of this sum for different values of i are given in the table below. Each entry corresponds to the sum of the values in a row of table 3.1:

With few constraints, there is obviously a large number of possible hypotheses. At present, the system is set up to deal with a maximum of $i = 20$ external gunshot wounds. The system allows the user to constrain the pairings by specifying which wounds are entry wounds and which are exit wounds (so for example an entry wound is never paired with another entry wound, and an exit wound is never paired with

¹This is predicated on the view that it is highly unlikely for two successive bullets to enter and/or leave the body through the same point(s) on the skin surface.

$i = 2$	$i = 3$	$i = 4$	$i = 5$	$i = 6$
3	9	39	195	1185

Table 3.2: Hypotheses given i gunshot wounds

another exit wound or with a bullet). In the event that it is not known which wounds are entry wounds and which are exit wounds, the wound type is labeled unknown and the wound is paired with other wounds as either an entry or an exit wound. Note that the specification of which wounds are entry or exit wounds merely serves to reduce the number of possible hypotheses,² since trajectories in both directions are treated as equivalent.

Currently, to view any of the individual hypotheses possible for a given number of gunshot wounds and bullets, we pick a hypothesis at random from the set of all possible penetration path hypotheses. A preferable alternative would be to cycle through the set of hypotheses, returning to the first hypothesis in the set only after the last has been viewed, and future versions of the system will adopt this approach.

3.3 Performing penetration analysis

Once we have obtained a set of wound path spaces from a given penetration path hypothesis and from stab wounds, if they exist, we can determine which anatomical parts are affected by computing intersections between geometric representations of the different wound path spaces and the anatomical structures in the body. To reduce computation, the structures that intersect a wound path space are found in two steps.

First, the smallest axis-aligned parallelepipeds (bounding boxes) that enclose each relevant anatomical structure and each wound path space representation are computed (figure 3.2 gives the bounding box for the polygonal surface representation of a diaphragm).³ If a vertex of the bounding box for an anatomical structure lies within the bounding box for a wound path space representation or vice-versa, the figures enclosed by these boxes are noted as candidates for intersection. All anatomical structures that are determined to intersect a wound path space representation in this step are stored for the second step. Since bounding boxes give at best a rough estimate of the shape and size of a figure, the first step may yield false positives (i.e., detect bounding box intersections in cases where the actual structures enclosed by these boxes are not intersecting). For example, the bounding box for the diaphragm

²In the first example involving four external wounds in section 3.1, if the two anterior wounds are marked as entry wounds and the two posterior wounds as exit wounds, hypothesis (c) which postulates that the two anterior wounds belong to the same wound path space and that the two posterior wounds belong to a second wound path space, is eliminated.

³Data structures for a figure in Jack[®] automatically include fields for the points comprising the figure's bounding box vertices.

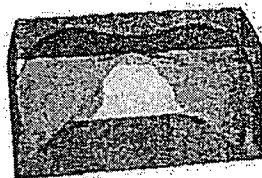

Figure 3.2: Bounding box for the polygonal surface representation of a diaphragm

is much larger than the actual figure due to the concavity of the diaphragm, and as a result, bounding box intersection computations involving the diaphragm may yield false positives. The first step does not yield false negatives – it will not omit from further consideration any organs that could intersect with a given wound path space.

In the second step, for each wound path space we create a list of the anatomical structures produced as possible candidates for intersection in the first step. We then check the polygons and polygon edges that make up the polygonal surface model of the wound path space for intersection with the polygons and polygon edges that make up the surface model of each anatomical structure on the list. Those anatomical structures determined to intersect with a particular wound path space are stored. This step, called a segment to segment intersection check, is described in more detail below and is potentially more computationally intensive than the first step since a polygonal surface model of a structure may contain hundreds or thousands of polygons depending on its resolution. The first step is thus a quick way of reducing the set of objects that need to be considered.

The segment to segment intersection check is based on Welton Becket's `fast_seg_seg_int()` routine for checking whether two polyhedra (which may both be concave) intersect. Given two polyhedra, A and B, it checks whether the polygons that comprise A intersect with the edges of B's polygons and vice-versa. The polygons composing each polyhedron are assumed to be convex:

```
seg_seg_int(A, B)
  for all edges i in A
    for all polygons j in B
      if an edge i intersects with a polygon j
        return TRUE
  for all edges i in B
    for all polygons j in A
      if an edge i intersects with a polygon j
        return TRUE
  return FALSE
```

The algorithm quits, returning the value TRUE as soon as a polygon and edge that intersect are found. In the worst case, the two polyhedra do not intersect and every polygon and edge in polyhedron A is checked against every edge and polygon in polyhedron B before a value of FALSE is returned.

3.4 Calculating injury probabilities

After the set of anatomical structures associated with a particular wound path space is determined, it is useful to know how likely it is that each structure in the set was hit. We use penetration probabilities to express the likelihood of involvement of anatomical structures in a given ballistic injury/stabbing. Since the penetration probabilities calculated are at best approximations, our calculations include upper and lower limits of confidence about the accuracy of each probability derived. The interval estimated by these confidence bounds is a range of probabilities that has a 95% chance of including the true penetration probability (it is a 95% confidence interval).

The hit probability for a given anatomical structure is calculated by generating a number of experimental trajectories or stab paths (within a wound path space that has already been determined to intersect the structure), and then computing how many of these trajectories or stab paths hit the structure in question. For each wound path space that intersects some anatomical structures, an intersection check is performed between trajectories generated within the wound path space and all anatomical structures that intersect the wound path space. Each trajectory generated either intersects a structure (a hit) or does not (a miss). The total number of trajectories or stab paths that intersect a particular anatomical structure is represented by the binomial random variable X with parameters n and p , where n is the total number of experimental trajectories or stab paths generated and p the probability of a hit. The sample hit probability for the anatomical structure, $\bar{X}$, is defined as the mean number of hits for the particular number of trajectories generated; the total number of hits divided by the total number of randomly generated trajectories:

$$\bar{X} = \frac{X}{n} \quad (3.4)$$

We use the sample hit probability, $\bar{X}$, as an estimate of p because for a binomial random variable, the sample probability of success (the sample hit probability in our case) is the maximum likelihood estimator for the true probability of success (the true hit probability), and as such has many desirable properties.

We determine the confidence bounds for a given hit probability using a normal approximation to the binomial distribution. Using the normal distribution to approximate the binomial for cases where $\bar{X} \leq 0.5$ and $n\bar{X} > 5$ or $\bar{X} > 0.5$ and

$n(1 - \bar{X}) > 5$ is a standard approach in statistics since it cuts down on the length of computation that would be involved in computing probabilities directly from the binomial distribution (see [27, 28, 34]). The confidence bounds for the hit probability are given by:

$$\left(\bar{X} - z_{\alpha/2} \sqrt{\frac{\bar{X}(1 - \bar{X})}{n}}, \bar{X} + z_{\alpha/2} \sqrt{\frac{\bar{X}(1 - \bar{X})}{n}} \right) \quad (3.5)$$

where n is the sample size (the total number of simulated trajectories) and $\alpha/2$ is the area under the standard normal density function from $-\infty$ to $z_{\alpha/2}$. The interval described by equation 3.5 corresponds to a $100(1 - \alpha)\%$ confidence interval. For on-screen display purposes, we write equation 3.5 as

$$\bar{X} \pm z_{\alpha/2} \sqrt{\frac{\bar{X}(1 - \bar{X})}{n}}$$

In order to produce a 95% confidence interval, α is set to 0.05 and the corresponding value for $z_{\alpha/2} = z_{0.025}$ is 1.960 [27, 28].

The process of generating experimental trajectories for gunshot wounds differs slightly from that for stab wounds since the mechanisms of injury for both cases lead to different wound path space models (see figures 2.1(a) and 2.2).

A different approach to estimating the hit probabilities for both gunshot and stab wounds would be to make top-down cross-sectional slices of a 3D wound path space model in conjunction with the anatomical structures it intersected. The cross-sectional slices of the gunshot wound and stab wound path space models would be a series of concentric circles. For each anatomical structure determined to intersect the wound path space, we could project those cross sectional slices of the wound path space that included slices of the anatomical structure in question onto a 2D plane (see figure 3.3(c)). The probability of injury for the anatomical structure would then be expressed in terms of the portion of its cross-sectional area that intersected the cross-sectional area of the wound path space. The injury probability for the anatomical structure would be that of the cross-sectional slice with the maximum area relative to the area of the wound path space cross-section. Estimating the cross sectional area of the anatomical structure could prove difficult though, given the fact that most anatomical structures do not have cross-sections that correspond to standard geometric shapes.

3.4.1 Generating experimental bullet trajectories

Our method for calculating hit probabilities for ballistic injuries involves simulating possible trajectories. To determine the number of trajectories to use for the probability calculations we experimented with simulating different numbers of trajectories,

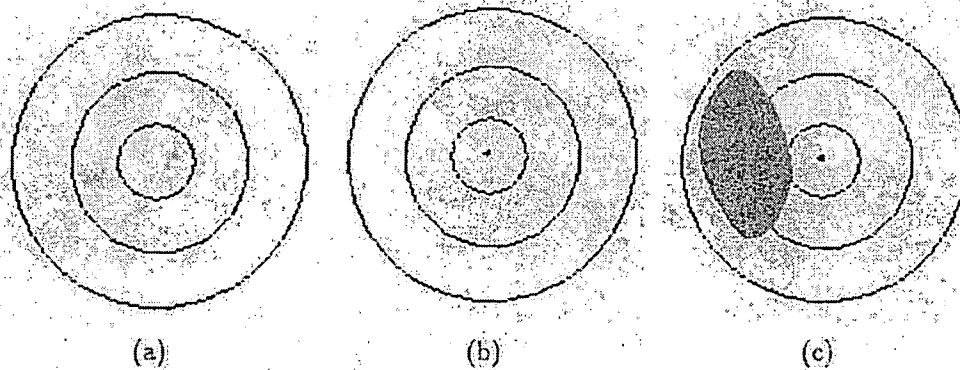

Figure 3.3: Stab and gunshot wound path space cross-sections

starting with 50 trajectories and estimating injury probabilities for the same set of external wounds and anatomical structures. The difference in the endpoints of the confidence interval is $2z_{\alpha/2}\sqrt{\frac{\bar{X}(1-\bar{X})}{n}}$, which decreases at a rate inversely proportional to the square root of the number of simulated trajectories ($\sqrt{n}$). Currently, we generate 200 trajectories for the purpose of calculating injury probabilities, but the number of trajectories simulated can easily be increased (at the expense of an increase in computation time since more assessments of intersections between trajectories and anatomical structure must be performed).

The simulated trajectories are either curves that stay within the inner boundaries of the wound path space, or straight lines through the center of the wound path space. Each trajectory extends from one apex of the wound path space to the other and is created from two randomly generated angles. One angle corresponds to the amount of a trajectory's deviation from a straight line path and the other to its rotation about a given wound path space apex. The angle corresponding to the amount of the trajectory's deviation from a straight line path is generated using a random number generator from the Free Software Foundation that generates random numbers according to a normal distribution. The random number generator accepts as input the mean angle and variance for the distribution. In this case, the mean is an angle of 0 degrees, corresponding to a straight line path (i.e., the average trajectory is one that does not deviate from a straight line path) and the variance corresponds to $(0.5 * \text{MaxAngle})^2$, where *MaxAngle* is the angle that represents the maximum deviation a trajectory can have from a straight line path while staying within the boundaries of the wound path space model.

The value for the variance is selected in keeping with two conventions:

- In a normal distribution, 95% of values in the distribution are expected to occur within two standard deviations of the mean for the distribution; and,

- In trauma care, injuries that have less than a 5 being present (based on clinical information) are not pursued with costly definitive diagnostic procedures.

Since the standard deviation ($0.5 * MaxAngle$) is half of the two standard deviations from the center that would encompass 95% of bullet paths, we set the variance to be $(0.5 * MaxAngle)^2$. This choice of variance produces trajectories which stay within the boundaries of the wound path space model roughly 95% of the time and trajectories whose paths lie outside these boundaries roughly 5% of the time (see appendix A).

The angle representing a trajectory's rotation about a wound path space apex varies from 0 degrees (inclusive) to 360 degrees (not inclusive) and is generated using the C standard library pseudo-random number generator, `drand48`, which generates uniformly distributed numbers over the interval $[0.0, 1.0)$.

3.4.2 Generating experimental stab paths

To determine stab wound probabilities, we simulate a set of blades within the stab wound path space using two angles to determine how the blade slants and twists in the body. One angle corresponds to the deviation of the blade from a direction perpendicular to the entry point on the skin surface and the second corresponds to the rotation of the blade about an axis perpendicular to the blade's entry point on the skin surface. The angles are generated in much the same way as those for the gunshot trajectories: the first is produced by the random number generator that obeys a normal distribution, and the second by the C standard library random number generator, `drand48`. We experimented with the number of blades simulated and increased this number from 50 to 200. Currently 200 blades are generated and tested for intersection with the anatomical structures. As with the gunshot wound trials, the number of blades used in intersection calculations may be increased but the attendant trade-off between accuracy in estimating probabilities and increases in computation time must be taken into consideration.

3.4.3 Examples: Estimating hit probabilities

We examine here the estimation of hit probabilities for two hypothetical cases; one involving a gunshot wound to the heart and the other a stab wound to the diaphragm.

Example 1

Assume that we discover based on penetration analysis (as outlined in Section 3.3) that a gunshot wound path space penetrates the heart. To obtain the hit probability for the heart given this information, we simulate 200 trajectories and discover that 192 of these simulated trajectories intersect the heart. From equation 3.4, we know that the sample hit probability is given by

$$\bar{X} = \frac{192}{200} = 0.96$$

$$\Rightarrow P_{overall}(structure) = \sum_{h=1}^H Q_h - \sum_{h=1}^H Q_h(1 - \bar{X}_1) \cdots (1 - \bar{X}_d)(1 - \bar{Y}_{h_1}) \cdots (1 - \bar{Y}_{h_f})$$

Let $\sum_{h=1}^H Q_h(1 - \bar{X}_1) \cdots (1 - \bar{X}_d)(1 - \bar{Y}_{h_1}) \cdots (1 - \bar{Y}_{h_f}) = V$. We can rewrite the above equation as $P_{overall}(structure) = 1 - V$, or $P = 1 - V$ for short.

$$\frac{\partial P}{\partial \bar{X}_i} = \frac{V}{1 - \bar{X}_i}$$

$$V = (1 - \bar{X}_1) \cdots (1 - \bar{X}_d) \sum_{h=1}^H Q_h(1 - \bar{Y}_{h_1}) \cdots (1 - \bar{Y}_{h_f})$$

$$\frac{\partial V}{\partial \bar{X}_i} = -\frac{V}{1 - \bar{X}_i}$$

$$\frac{\partial V}{\partial \bar{Y}_{h_j}} = -\frac{(1 - \bar{X}_1) \cdots (1 - \bar{X}_d) Q_h T_h}{1 - \bar{Y}_{h_j}}$$

Let $U = \prod_{i=1}^d (1 - \bar{X}_i)$ and $V = U \sum_{h=1}^H Q_h T_h$. The confidence bounds for the overall hit probability are given by

$$(1-V) \pm z_{\alpha/2} \sqrt{\sum_{m=1}^d \frac{V^2}{(1 - \bar{X}_m)^2} \frac{\bar{X}_m(1 - \bar{X}_m)}{n} + U^2 \sum_{h=1}^H Q_h^2 T_h^2 \sum_{j=1}^f \frac{1}{(1 - \bar{Y}_{h_j})^2} \frac{\bar{Y}_{h_j}(1 - \bar{Y}_{h_j})}{n}}$$

where n is the sample size, the total number of simulated trajectories/stab paths.

3.5 'Interactive' example

In this section we examine a scenario with four external gunshot wounds to the left and ride sides of the chest (like the first example in 3.1). Figure 3.4 shows top views of the three different penetration path hypotheses for these gunshot wounds and the text output below represents the system's findings for each hypothesis.

Chapter 4

The User Interface

4.1 Overview

The penetration path assessment system is implemented within the *Jack*[®] system using C. It has the menu structure given in table 4.1. In order to use the system, the user must first load a human body model using the Load Human Figure option. At present, a female torso is loaded (see figure 4.1). Gunshot or stab wounds can be placed on the skin surface at the anterior, posterior, left or right hand side of the body model. Bullets can also be placed within the body. In the case of (multiple) gunshot wounds, the user must generate a penetration path hypothesis to obtain the appropriate set of wound path spaces. The set of anatomical structures injured (along with the injury probability) for a given wound path space is obtained by selecting the Show Intersections option from the menu. The system highlights the structures affected and in a separate pop-up window, prints out their injury probabilities. The user can also perform a fly-through of the body, tracing the path made by a wound path space to get a sense of the structures it affects. To explore the effects of projectile ricochet, the user can place nicks on a part of the skeleton that intersects a wound path space and then generate a new hypothesis that takes into account bullet ricochet.

Table 4.1: Menu structure for penetration path assessment system

4.2.1 Wound placement

Surface gunshot and stab wounds are placed on the body relative to the skeleton – the skin surface is made transparent and other structures are temporarily hidden so that the skeleton shows through as a landmark. The user places a wound on any part of the skin surface by clicking on that surface. Since the body model is three-dimensional, for any anterior skin surface point clicked on by the user, there is a corresponding posterior skin surface point, and the same holds for the left and right sides of the body. The system accepts the surface closest to the user as the intended placement point of the surface wound. For gunshot wounds, the system displays a flattish cylindrical wound model at the point of contact. For stab wounds, the wound path space for a stab wound is generated from the point of contact, and projects into the body.

4.2.2 Bullet and skeletal nick placement

As with surface wounds, bullets are placed relative to the skeleton. The user first fixes the $x - y$ position of the bullet (i.e., the position of the bullet relative to the top, bottom, and left and right sides of the body) using crosshairs that lie within the $x - y$ plane and then the $y - z$ position (the depth of the bullet relative to the front and rear of the body). Skeletal nicks are placed by clicking on a point of the skeleton's surface. The nick is placed at the surface point closest to the user.

4.3 System Output

Output from the system comes in two forms: text – names of structures suspected to be injured and the probability they are involved in injury; graphics – color coding of the graphical display to highlight the three-dimensional models of anatomical structures affected by a particular wound path space. Visual reinforcement of the text output is also provided by through-body navigations, whereby a user can essentially “follow” a bullet or stab path through the 3D models of the organs and observe which organs lie in the path of the wound path space.

Chapter 5

Applications

The penetration path assessment system is designed to work with the TraumAID [31, 35], and MediSim [3] systems developed at the University of Pennsylvania, both of which suggest actions that should be taken by medical personnel when faced with patients suffering from penetrating injuries. The system is also a potentially useful tool for aiding medical students in learning about anatomy and perhaps in refreshing experts' memories about the spatial relations of different anatomical structures.

5.1 TraumAID

TraumAID is an expert system designed to assist physicians with the diagnosis and treatment of multiple trauma. The TraumAID system integrates diagnostic reasoning, planning, and action. Currently, TraumAID uses a rule-based reasoner to identify diagnostic and therapeutic goals appropriate to a particular patient's state. The planner then advises the physician on beneficial actions that should be performed.

Recently there has been a push to move away from rule-based reasoning within TraumAID and to instead use belief networks to define diagnostic or therapeutic goals. Prior probabilities must be assigned to different nodes in the belief net in order to drive the network. Injury probabilities calculated from E-codes and ICD-9 codes collected from an existing Pennsylvania Trauma Registry database of 137,500 patients [26, 13], could be linked with the penetration probabilities generated by the penetration path assessment system to provide the prior probability values needed with regard to anatomical involvement of wounds.

In addition, there is a need to extend TraumAID's reasoning about anatomy: at present the body is represented as being partitioned into different regions, and a whole/part hierarchy is used to represent areas of the body to which injuries have occurred. So for example, a report of a penetrating injury to the left chest in TraumAID could potentially involve the lungs, heart, diaphragm or even the upper part of the abdomen close to the diaphragm. Different people might come up with different

hypotheses about injury due to the same wound(s) given this sort of general information (though feedback about patient signs and symptoms would help to eliminate some of the conjectures). By reducing uncertainty about the location of penetrating wounds, the penetration path system constrains the set of anatomical structures that could be associated with the wounds and possibly the set of injuries that would be suspected given these wounds. Since information about specific anatomical structures can be obtained from the penetration path assessment system, there is a framework for deeper anatomical reasoning which a system that reasoned only about larger regions of the body might not be able to provide.

5.2 MediSim

Medisim is a system that represents simulated medics interacting with simulated casualties within local or network virtual environments. It is designed to be used for the training and evaluation of medical corpsmen and civilian EMTs. Using injury models appropriate to either a battlefield or civilian situation, a set of physical and behavioral manifestations in a simulated casualty are determined and portrayed on a 3D body model. Wound and injury types for simulated casualties can be coupled probabilistically to a simulated battlefield. Probabilities of anatomical involvement generated by the penetration path system can be used to update the posterior probabilities of particular injuries simulated within MediSim.

5.3 Educational

As stated above, the penetration path assessment system could aid medical students in learning about anatomical structures by providing a 3D environment in which various anatomical structures can be observed at different angles and distances in relation to other structures or without obstruction since figures in the *Jack*® environment can be made to "disappear" by turning them off temporarily. Even experts might benefit from the system by having it confirm/disprove their notions about the spatial relationships among the different anatomical structures. This issue apparently does arise occasionally in medical practice as the case description below [14] illustrates:

A patient presented to the Emergency Center with a knife embedded in the right lower paraspinal chest and no other abnormal physical findings on examination. Anterior-posterior and lateral roentgenograms of the chest showed the tip of the knife just anterior to the seventh thoracic vertebra with the blade just to the right of the vertebra. The physicians caring for patient recognized that the descending aorta was anatomically too far to the left of the vertebral column to be injured, but were concerned enough about anatomical proximity to the esophagus to consider a contrast study

of the esophagus. The availability of an atlas of cross sectional anatomy of the thorax at the T-7 level showed that the esophagus was also too far to the left at this level to be injured and the contrast study was not done based on this information. The knife was removed in the operating room and the patient was observed. He was treated for a delayed pneumothorax and recovered without further consequences.

Chapter 6

Future Work

6.1 Improvements to anatomical and wound path space models

6.1.1 Body Type

To make the assessments produced by the penetration path system more reflective of actual patient information, we need to incorporate into the system full-body models for both males and females that can easily accommodate differences in shapes, sizes and relative organ placements of different individuals. This is because the internal impact of a set of surface wounds on two people of different sizes or shapes will tend to differ. One way of addressing this would be to scale the polygonal surface models of anatomical parts to fit different individuals' profiles prior to injury generation and assessment. We plan to take advantage of the Visible Human data set in order to provide complete models of both the female and male anatomies. With these updated models, we could address injuries to the complete body.

6.1.2 Anatomical Structure Representation

The polygonal surface models currently in use offer the following advantages:

- The amount of data needed for representation of anatomical structures is not overwhelming but still represents the structures adequately (for example, the low resolution heart model used in the system is made up of 752 polygons while the equivalent high resolution model has 3466 polygons and takes twice as much time to display)
- Assessments of injury to organs and associated probabilities can be computed relatively quickly (it takes an average of 58 seconds for an experienced user to

interactively load the human torso, enter two external wounds, generate a hypothesis and compute the penetration probabilities on a Silicon Graphics Indigo 2), and

- The polygonal surface representation is compatible with existing software in use at the University of Pennsylvania's Center for Human Modeling and Simulation.

However, with the surface models, we cannot offer the user any details of the anatomy beyond the surface of a particular structure. To obtain such a detailed level of information about the anatomy, it would be necessary to use volumetric models for the anatomical structures rather than surface models. A drawback to using volumetric models is that representing anatomical structures would require a tremendous amount of data[23]. A compromise could be to perform the organ intersection and injury probability assessments using polygonal surface models, and to utilize volumetric models mainly for through-body navigations.

6.1.3 Stab path treatment

At present, the angle of entry, and blade width and length of the instrument used in a stabbing are assumed to be fixed. It would be desirable to allow for variations in these factors by eliciting information about blade length, width and entry angle from the user.

6.2 Constraining the penetration path hypotheses

By allowing feedback as to the status of a patient in terms of test results and physicians' findings, we could eliminate certain penetration path hypotheses if the results obtained do not support such hypotheses. This entails developing a system which given a set of penetration path hypotheses and their associated probabilities as well as patient signs and symptoms (or physician's findings) would determine based on the signs and symptoms (or findings) which hypotheses were likely and rule out those deemed unlikely. This would also involve refining (increasing) the penetration probabilities for anatomical structures associated with hypotheses that are not ruled out and decreasing the penetration probabilities of those structures associated with ruled-out hypotheses.

6.3 User Interface

It would be useful to obtain feedback on the ease of use of the system from medical personnel and information on features that might be desired by physicians in different specialties. Information gathered would also be useful in determining the most effective ways of presenting the system's output to the user.

Chapter 7

Conclusion

We have presented a graphical user interface for assessing the impact of gunshot and stab wounds on a human model in terms of the anatomical structures affected and the probability of injury to these structures. Since anatomical knowledge is critical for emergency medical personnel to evaluate possible organ involvement in penetrating injury, a goal of the system is to aid in visualizing affected structures. Applications of the system include assisting diagnostic programs like TraumAID in improving their anatomical reasoning, aiding training systems such as MediSim in deriving posterior probabilities of particular types of injuries, and helping medical students in learning about anatomy. The system has potential emergency room applicability: attending physicians could obtain the system's penetration path analysis at the same time that roentgenographic information is made available to them.

Appendix A

Changing the Variance

Hit probabilities for the same set of gunshot wounds given different variances

Jack window X-Y coordinates for gunshot wounds

Anterior gunshot wound x coordinate: 357

Anterior gunshot wound y coordinate: 408

Posterior gunshot wound x coordinate: 269

Posterior gunshot wound y coordinate: 417

Number of trajectories generated : 200

We use a random number generator (Normal rnd(mean, variance, generator)) which generates numbers based on a normal distribution. For the output below it is called with a mean angle of 0 and a variance of $(Fraction * Max_angle)^2$, where Max_angle (20.402820 degrees) is the angle that produces a trajectory with the maximum deviation from a straight line path that still stays within the boundaries of the wound path space model. At present, a trajectory whose deviation exceeds this maximum is automatically considered a miss.
