Re. Mosi A Bundu and Malcolm DJ Watts v, Ricky Chastain, County Sheriffs Dept; Socrates Ledda, City Police Chief; Sgt Michael Gainey and Office Logan Kanpie. Case No. 2017-001831

Dear Ms. Kitchings:

We are submitting a written motion for consideration of a 30-45 day extensions in this rule 210 phase of the appeal, as I stated when we talk , major illness of a stroke and a fall through rotted out steps cause a set back in my stroke recovery all affecting my mental capacity to meet deadlines and handle our appeal according to the rules. There are also problems regarding our transcript request and how they have been handled. The respondents have noted in flings that they have received and have transcripts from June 1, 2017 and August 1, 2017. I asked for and request cost of both transcripts, but only received the transcript from June 1, 2017, when we missed that motion to dismiss in lower court. My request will show that I wanted all transcripts, especially the one where we were present, August 1, 2017. In addition to that transcripts were sent back to me for some reason when I submitted my initial brief and designation of matters. I would also ask of the court to not send documents on a Friday which do not get to me until that following Monday or Tuesday, which cause me to lose time, when I have to respond with 10 days of the date of the failure to meet a deadline, especially if there are days prior to mailing such a notice when the days have passed.

If there are any issues with this motion please do not hesitate to contact me.

✓

Respectfully,

*Mosi A. Bundu
Malcolm DJ Watts*

ORDERING MD: MAHMOUD RAYES, MD OP LOCATION:

IMG271 MRI BRAIN W/WO CONTRAST ACCESSION NO: LCM201444740
ORDERED BY: MAHMOUD RAYES, MD

DATE OF EXAM: 11/13/2017 08:45
REASON FOR EXAM: I63.9^Cerebral infarction, unspecified^I10

ADMISSION DATE: 11/13/2017 08:16

MRI Brain with Contrast 11/13/2017:

TECHNIQUE:

Sagittal T1-weighted axial T2*, diffusion weighted, T1-weighted, and T2-weighted images were obtained with axial and coronal FLAIR whole brain images obtained. Axial and coronal T1-weighted images were obtained after intravenous administration of 7 mL Gadavist

COMPARISON:

CT head 10/25/2017

HISTORY:

Left facial droop and left-sided weakness began approximately 3 weeks ago.

FINDINGS:

Brain parenchyma: An ovoid area of FLAIR T T signal abnormality is noted in the far lateral aspect of the thalamus and adjacent posterior limb of the right internal capsule. Likely this is a deep white matter infarct. The marrow enhancement is seen after contrast administration. There is no convincing evidence of restricted diffusion. In addition numerous much smaller lesions are identified scattered throughout the cerebral white matter likely indicative of areas of gliosis from chronic small vessel ischemic insults.

After contrast administration there appears to be normal cortical venous and dural enhancement without pathologic leptomeningeal or parenchymal enhancement identified.
