Specimen

Impressions	Performed At
Stable chest post pacemaker placement as above. No pneumothorax.	PACS

Narrative	Performed At
CLINICAL DATA: ICD	PACS

COMPARISON: 4/1/2020

TECHNIQUE: Frontal and lateral radiographs of the chest were obtained.

FINDINGS: There has been placement of a left chest wall pacer device, with lead tips in the right atrium, right ventricular apex, and coronary sinus. Stable size and contour of the cardiomeastinal silhouette. Patchy residual airspace disease predominantly in the left mid to lower lung persists and is not significantly changed. No definitive new airspace disease, pleural effusion, or pneumothorax.
